**(AUTONOMOUS)**  
**M.E. APPLIED ELECTRONICS**  
**REGULATIONS 2015**  
**CURRICULUM**

**SEMESTER I**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
PMA15101	Applied Mathematics for Electronics Engineers	3	2	0	4
PAE15102	Advanced Digital Signal Processing	3	2	0	4
PAE15103	Advanced Digital Logic System Design	3	2	0	4
PAE15104	Advanced Microprocessor and Microcontroller	3	2	0	4
PAE15105	Multicore Architecture and Programming	3	2	0	4
E1	Elective I	3	0	0	3
PAE15107	Electronics System Design Laboratory I	0	0	4	2

**SEMESTER II**

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
PAE15201	Analysis and Design of Analog Integrated Circuits	3	2	0	4
PAE15202	ASIC and FPGA Design	3	2	0	4
PAE15203	Low Power VLSI Design	3	2	0	4
E2	Elective II	3	0	0	3
E3	Elective III	3	0	0	3
E4	Elective IV	3	0	0	3
PAE15207	Electronics System Design Laboratory II	0	0	4	2

## LIST OF ELECTIVES

### ELECTIVE I

Course Code	Course Title	L	T	P	C
PAE15151	Advanced Digital Image Processing	3	0	0	3
PAE15152	Wavelet Transforms and Applications	3	0	0	3
PAE15153	Soft Computing	3	0	0	3
PAE15154	Computer Architecture and Parallel Processing	3	0	0	3

### ELECTIVE II

Course Code	Course Title	L	T	P	C
PAE15251	CAD for VLSI Circuits	3	0	0	3
PAE15252	Digital Control Engineering	3	0	0	3
PAE15253	Mobile Networks	3	0	0	3
PAE15254	Sensors and Signal Conditioning	3	0	0	3

### ELECTIVE III

Course Code	Course Title	L	T	P	C
PAE15351	VLSI Design Techniques	3	0	0	3
PAE15352	Fiber Optic Sensors	3	0	0	3
PAE15353	Digital Signal Processing Integrated Circuits	3	0	0	3
PAE15354	RF System Design	3	0	0	3

### ELECTIVE IV

Course Code	Course Title	L	T	P	C
PAE15451	Physical Design of VLSI Circuits	3	0	0	3
PAE15452	VLSI Signal Processing	3	0	0	3
PAE15453	Solid State Device Modeling and Simulation	3	0	0	3
PAE15454	High Performance Networks	3	0	0	3

**PMA15101 APPLIED MATHEMATICS FOR ELECTRONICS ENGINEERS 3 2 0 4**

**OBJECTIVES:**

- To acquire the fundamental knowledge of fuzzy sets, fuzzy logic, fuzzy decision making and fuzzy control systems.
- To learn about Matrix theory and Dynamic Programming.
- To know about Queuing Models

**UNIT I FUZZY LOGIC 9+6**

Classical logic – Multi valued logics – Fuzzy propositions – Fuzzy quantifiers

**UNIT II MATRIX THEORY 9+6**

Generalized Eigen values and Eigen vectors - Some important matrix factorizations – The Cholesky decomposition – QR factorization – Least squares method – Singular value decomposition - Toeplitz matrices and some applications

**UNIT III ONE DIMENSIONAL RANDOM VARIABLES 9+6**

Random variables - Probability function – moments – moment generating functions and their properties – Binomial, Poisson, Geometric, Uniform, Exponential, Gamma and Normal distributions.

**UNIT IV DYNAMIC PROGRAMMING 9+6**

Dynamic programming – Principle of optimality – Forward and backward recursion – Applications of dynamic programming – Problem of dimensionality

**UNIT V QUEUING MODELS 9+6**

Markovian queues – Single and Multi-server Models – Little's formula -Machine Interference Model – Steady State analysis – Self Service queue.

**TOTAL: 45+30 PERIODS**

**OUTCOMES:**

**After Completion of the course, the students will be able to:**

- Understand the basic principles of fuzzy logic.
- Gain knowledge about Matrix theory and Dynamic Programming
- Develop efficient algorithms for solving dynamic programming problems, to acquire skills in handling situation involving random variable.

- Analyze queuing models.

3. [www.webopedia.com](http://www.webopedia.com)

**OBJECTIVES:**

- To impart knowledge on Multirate Signal Processing and FIR Filter design
- To develop fundamental understanding on Power Spectrum Estimation
- To Study about Linear Estimation and Prediction
- To impart knowledge about Adaptive Filters and Wavelet Transform

**UNIT I      MULTIRATE SIGNAL PROCESSING AND MULTIRATE FIR FILTER DESIGN**

**9+6**

Introduction to Decimation and Interpolation -Design of FIR filters for sampling rate conversion – Applications of Interpolation and decimation in signal processing –Filter bank implementation –Two channel filter banks-QMF filter banks –Perfect Reconstruction Filter banks – tree structured filter banks

**UNIT II      POWER SPECTRAL ESTIMATION**

**9+6**

Estimation of spectra from finite duration observations of a signal – The Periodogram - Use of DFT in Power spectral Estimation –Non-Parametric methods for Power spectrum Estimation – Bartlett Welch and Blackman–Turkey methods –Comparison of performance of Non – Parametric power spectrum Estimation methods –Parametric Methods - Yule-Walker equations, solutions using Durbin’s algorithm, AR, MA, ARMA model based spectral estimation. Application: speech enhancement using power spectrum estimation

**UNIT III      LINEAR ESTIMATION AND PREDICTION**

**9+6**

Forward and Backward linear prediction, Filtering - FIR Wiener filter- Filtering and linear prediction, non-causal and causal IIR Wiener filters, Discrete Kalman filter

**UNIT IV      ADAPTIVE FILTERS**

**9+6**

Principles of adaptive filter – FIR adaptive filter – Newton’s steepest descent algorithm – Derivation of first order adaptive filter – LMS adaptation algorithms – Adaptive noise cancellation, Adaptive equalizer, Adaptive echo cancellers

**UNIT V      WAVELET TRANSFORM**

**9+6**

Short Time Fourier Transform, Continuous and discrete wavelet transform, Multi resolution analysis, Application of wavelet transform, Cepstrum and Homomorphic filtering

**TOTAL: 45+30 PERIODS**

## **OUTCOMES:**

**After Completion of the course, the students will be able to:**

- Understand Multirate Signal Processing
- Gain knowledge about Power Spectrum Estimation
- Explain the linear estimation and prediction
- Learn about Adaptive Filters
- Analyze the wavelet transforms.

## **WEBLINKS**

1. [www.gwyddion.net/documentation/user-guide-en/wavelet-transform.html](http://www.gwyddion.net/documentation/user-guide-en/wavelet-transform.html)
2. [www.nptel.ac.in/courses/108105059/12](http://www.nptel.ac.in/courses/108105059/12)
3. [www.nptel.ac.in/courses/117101001](http://www.nptel.ac.in/courses/117101001)

**OBJECTIVES:**

- To familiarize the practical issues of sequential circuit design
- To understand the concepts of Asynchronous Sequential Circuit Design.
- To study the concepts & gain knowledge about different fault diagnosis and testing methods.
- To study the performance estimation of digital systems.
- To design & timing Analysis of memories

**UNIT I SEQUENTIAL CIRCUIT DESIGN****9+6**

Analysis of Clocked Synchronous Sequential Networks (CSSN) - Modeling of CSSN – State Assignment and Reduction – Design of CSSN – Design of Iterative Circuits– ASM Chart – ASM Realization, Design of Arithmetic circuits for Fast adder- Array Multiplier

**UNIT II ASYNCHRONOUS SEQUENTIAL CIRCUIT DESIGN****9+6**

Analysis of Asynchronous Sequential Circuit (ASC) – Flow Table Reduction – Races in ASC – State Assignment Problem and the Transition Table – Design of ASC – Static and Dynamic Hazards – Essential Hazards – Design of Hazard free circuits - Data Synchronizers –Designing Vending Machine Controller – Mixed Operating Mode Asynchronous Circuits. Practical issues such as clock skew, synchronous and asynchronous inputs and switch bouncing

**UNIT III FAULT DIAGNOSIS AND TESTING****9+6**

Fault diagnosis: Fault Table Method – Path Sensitization Method – Boolean Difference Method –Kohavi Algorithm – Tolerance Techniques – The Compact Algorithm. Design for testability: Test Generation – Masking Cycle – DFT Schemes. Circuit testing fault model, specific and random faults, testing of sequential circuits, Built-in Self-Test, Built in Logic Block observer (BILBO), signature analysis.

**UNIT IV SYNCHRONOUS DESIGN USING PROGRAMMABLE DEVICES****9+6**

EPROM to Realize a Sequential Circuit – Programmable Logic Devices – Designing a Synchronous Sequential Circuit using a GAL – EPROM – Realization State machine using PLD – FPGA – Xilinx FPGA– Xilinx 2000 -Xilinx 3000

**UNIT V SYSTEM DESIGN USING VHDL****9+6**

VHDL Description of Combinational Circuits – Arrays – VHDL Operators – Compilation and Simulation of VHDL Code – Modeling using VHDL – Flip Flops – Registers – Counters – Sequential Machine – Combinational Logic Circuits - VHDL Code for – Serial Adder, Binary Multiplier – Binary Divider – complete Sequential Systems – Design of a Simple Microprocessor

**TOTAL: 45 +30 PERIODS**

### **OUTCOMES:**

**After Completion of the course, the students will be able to:**

- Learn the synchronous sequential circuit design
- Learn the design of Asynchronous sequential circuit design
- Know about Fault Diagnosis& Testing Methods
- Study the performance estimation of digital systems.
- Design timing Analysis of memories

**PAE15104      ADVANCED MICROPROCESSOR AND MICRO-CONTROLLER      3 2 0 4**

**OBJECTIVES:**

- To expose the students to the fundamentals of microprocessor architecture.
- To introduce the advanced features in microprocessors and microcontrollers.
- To enable the students to understand various microcontroller architectures
- To understand in built function of PIC controller.
- To understand about special purpose processors.

**UNIT I      MICROPROCESSOR ARCHITECTURE      9+6**

Instruction set – Data formats – Instruction formats – Addressing modes – Memory hierarchy – register file  
Cache – Virtual memory and paging – Segmentation – Pipelining – The instruction pipeline – pipeline  
Hazards- The software model – functional description – CPU pin descriptions – RISC concepts – RISC  
Properties – RISC Evaluation- RISC Versus CISC- Virtual 8086 model – Interrupt processing -Instruction  
types – Addressing modes – Processor flags – Instruction set

**UNIT II      HIGH PERFORMANCE CISC ARCHITECTURE-PENTIUM      9+6**

CPU Architecture- Bus Operations – Pipelining – Branch predication – floating point UNIT-Operating Modes  
–Paging – Multitasking – Exception and Interrupts – Instruction set –addressing modes –Programming the  
Pentium processor.

**UNIT III      HIGH PERFORMANCE RISC ARCHITECTURE-ARM      9+6**

Organization of CPU – Bus architecture –Memory management UNIT - ARM instruction set- Thumb  
Instruction set- addressing modes – Programming the ARM processor.6

**UNIT IV      PIC MICRO-CONTROLLER      9+6**

CPU Architecture – Instruction set – interrupts- Timers- I2C Interfacing – UART- A/D Converter –PWM  
and introduction to C-Compilers

**UNIT V      SPECIAL PURPOSE PROCESSORS      9+6**

Altera Cyclone Processor – Audio codec – Video codec design- Platforms-General Purpose processor-  
Digital Signal Processor – Embedded Processor- Media Processor – Video Signal Processor- Custom  
Hardware-CO-Processor

**TOTAL: 45 +30 PERIODS**

**OUTCOMES:**

**After Completion of the course, the students will be able to:**

- Design and implement of advanced microprocessors
- Know about the high performance RISC and CISC architecture
- Perform PIC microcontroller programming
- Know about the various special purpose processors.

**PAE15105      MULTICORE ARCHITECTURE AND PROGRAMMING**

**3 2 0 4**

**OBJECTIVES:**

- To introduce the recent trends in the field of Multicore processor.
- To understand the challenges in parallel and multi-threaded programming.
- To learn about the various parallel programming paradigms, and solutions.

**UNIT I      MULTI-CORE PROCESSORS**

**9+6**

Single core to Multi-core architectures – SIMD and MIMD systems – Interconnection networks - Symmetric and Distributed Shared Memory Architectures – Cache coherence- Performance Issues – Parallel program design.

**UNIT II      PARALLEL PROGRAM CHALLENGES**

**9+6**

Performance – Scalability – Synchronization and data sharing – Data races – Synchronization primitives (mutexes, locks, semaphores, barriers) – deadlocks and live locks – communication between threads (condition variables, signals, message queues and pipes)

**UNIT III      SHARED MEMORY PROGRAMMING WITH OPEN MP**

**9+6**

Open MP Execution Model – Memory Model – Open MP Directives – Work-sharing Constructs – Library functions – Handling Data and Functional Parallelism – Handling Loops – Performance Considerations.

**UNIT IV      DISTRIBUTED MEMORY PROGRAMMING WITH MPI**

**9+6**

MPI program execution – MPI constructs – libraries – MPI send and receive – Point-to-point and Collective communication – MPI derived data types – Performance evaluation

**UNIT V      PARALLEL PROGRAM DEVELOPMENT**

**9+6**

Case studies - n-Body solvers – Tree Search – Open MP and MPI implementations and comparison.

**TOTAL: 45 +30 PERIODS**

**OUTCOMES:**

**After Completion of the course, the students will be able to:**

- Program Parallel Processors.
- Develop programs using Open MP and MPI.
- Compare and contrast programming for serial processors and programming for parallel processors.

1. [www.nptel.ac.in/courses/106104025](http://www.nptel.ac.in/courses/106104025)
2. <https://software.intel.com>
3. [www.springer.com/us/book/9783540245605](http://www.springer.com/us/book/9783540245605)

**OBJECTIVES:**

- To know and understand microcontroller and design circuits using it.
- To write programs in VHDL and Verilog for modeling digital circuits
- To study and verify the combinational and sequential logic circuits with various levels of modeling and EDA Tools.

**LIST OF EXPERIMENTS**

1. To write programs in VHDL and Verilog for modeling digital circuits
2. System design using PIC, MSP430, '51 Microcontroller and 16-bit Microprocessor - 8086.
3. Implementation of Adaptive Filters in DSP Processor
4. Implementation of multistage multirate system in DSP Processor
5. Simulation of QMF using Simulation Packages
6. Analysis of Asynchronous clocked sequential circuits
7. Analysis of synchronous clocked sequential circuits
8. Sensor design using simulation tools
9. Design and analysis of real time signal processing system – Data acquisition and signal processing.
10. Timer Operation – Real Time Clock using ARM processor

**TOTAL: 60 PERIODS**

**OUTCOMES:**

**After Completion of the course, the students will be able to:**

- Make models of transistor circuits and simulate them for various operational requirements.
- Design different types of multiplier using EDA Tool.
- Design FIR Filter using EDA Tool.
- Analyze and design of VLSI circuits.

**PAE15201 ANALYSIS AND DESIGN OF ANALOG INTEGRATED CIRCUITS**

**3 2 0 4**

**OBJECTIVES:**

- To impart knowledge on the CMOS Technology and Modeling of devices
- To understand the basic concepts of CMOS operational amplifiers
- To find the optimum solution of the complex problem in multistage amplifier.
- To Acquire the knowledge of biasing circuit, stability and frequency compensation

**UNIT I CMOS TECHNOLOGY AND DEVICE MODELING**

**9+6**

Basic MOS semiconductor fabrication processes-other considerations of CMOS technology-MOS large signal model and parameters-Small signal model for the MOS transistor-Computer simulation models-Sub threshold MOS model.

**UNIT II FREQUENCY RESPONSE AND NOISE ANALYSIS**

**9+6**

Miller effect, Association of poles with nodes, frequency response of common source stage, Source followers, Common gate stage, Cascode stage, Differential pair, Statistical characteristics of noise -noise in single stage amplifiers, noise in differential amplifiers.

**UNIT III CMOS OPERATIONAL AMPLIFIERS**

**9+6**

Buffered operational amplifiers-High speed and frequency operational amplifiers-Differential output operational amplifiers-Microwave operational amplifiers - Low noise operational amplifiers - Low voltage operational amplifiers.

**UNIT IV STABILITY AND FREQUENCY COMPENSATION**

**9+6**

General considerations, Multipole systems, Phase Margin, Frequency Compensation, and Compensation of two stage Op Amps, Slewing in two stage Op Amps, and Other compensation techniques.

**UNIT V BIASING CIRCUITS**

**9+6**

Basic current mirrors, cascode current mirrors, active current mirrors, voltage references, supply independent biasing, temperature independent references, PTAT current generation, Constant-Gm biasing.

**TOTAL: 45 +30 PERIODS**

## **OUTCOMES:**

**After Completion of the course, the students will be able to:**

- Explain CMOS technology and device modeling
- Perform analysis on frequency response
- Explain about CMOS operational amplifiers, stability and frequency compensation
- Know about Biasing circuits

**OBJECTIVES:**

- To learn the fundamentals of ASIC and its design methods and the physical design of ASIC.
- To learn logic synthesis and testing.
- To gain knowledge on programmable architectures for ASICs
- To learn concepts of system on chip design

**UNIT I OVERVIEW OF ASIC AND PLA****9+6**

Types of ASICs - Design flow – CAD tools used in ASIC Design – Programming Technologies: Anti fuse – static RAM – EPROM and EEPROM technology, Programmable Logic Devices: ROMs and EPROMs – PLA –PAL. Gate Arrays – CPLDs and FPGAs

**UNIT II ASIC PHYSICAL DESIGN PROGRAMMABLE ASIC****9+6**

System partition -partitioning - partitioning methods – interconnect delay models and measurement of delay - floor planning - placement – Routing: global routing - detailed routing - special routing – circuit extraction – DRC. Anti fuse -Static RAM - EPROM and EEPROM technology – Practical issues - PREP benchmarks - Actel ACT - Xilinx LCA –Altera FLEX - Altera MAX – Xilinx Spartan – Virtex FPGAs – Altera Cyclone FPGAs

**UNIT III LOGIC SYNTHESIS AND SIMULATION TESTING****9+6**

Design systems - Logic Synthesis - Half gate ASIC -Schematic entry - Low level design language -PLA tools -EDIF- CFI design representation. Verilog and logic synthesis -VHDL and logic synthesis -types of simulation -boundary scan test - fault simulation - automatic test pattern generation

**UNIT IV FPGA ARCHITECTURE****9+6**

Field Programmable gate arrays- Logic blocks, routing architecture, Design flow technology – mapping for FPGAs, Xilinx XC4000 - ALTERA's FLEX 8000/10000, ACTEL's ACT-1,2,3 and their speed performance Case studies: Altera MAX 5000 and 7000 - Altera MAX 9000 – Spartan II and Virtex II FPGAs – Apex and Cyclone FPGAs

**UNIT V SOC DESIGN****9+6**

Design Methodologies – Processes and Flows - Embedded software development for SOC –Techniques for SOC Testing – Configurable SOC – Hardware / Software co-design Case studies: Digital camera, Bluetooth radio / modem, SDRAM and USB.

**OUTCOMES:**

**After Completion of the course, the students will be able to:**

- Understand different types of ASIC's and physical design of ASIC.
- Understand logic synthesis and testing methods and different FPGA architectures.
- Design real time applications on SOC.

**PAE15203**

**LOW POWER VLSI DESIGN**

**3 2 0 4**

**OBJECTIVES:**

- To know the sources of power consumption in CMOS circuits
- To understand the various power reduction techniques and the power estimation methods.
- To study the design concepts of low power circuits.

**UNIT I POWER DISSIPATION IN CMOS**

**9+6**

Hierarchy of limits of power – Sources of power consumption – Physics of power dissipation in CMOS FET devices- Basic principle of low power design.

**UNIT II POWER OPTIMIZATION**

**9+6**

Logical level power optimization – Circuit level low power design – Circuit techniques for reducing power consumption in adders and multipliers - CMOS Circuits design styles, Adders, Multipliers

**UNIT III DESIGN OF LOW POWER CMOS CIRCUITS**

**9+6**

Computer Arithmetic techniques for low power systems – Reducing power consumption in memories – Low power clock, Interconnect and layout design – Advanced techniques – Special techniques

**UNIT IV POWER ESTIMATION**

**9+6**

Power estimation techniques – Logic level power estimation – Simulation power analysis – Probabilistic power analysis- Random Logic signals – Probabilistic power analysis techniques

**UNIT V SYNTHESIS AND SOFTWARE DESIGN FOR LOW POWER**

**9+6**

Synthesis for low power –Behavioral level transforms- Software design for low power – Sources of software power Dissipation – Software Power Estimation –Software Power optimization

**TOTAL: 45 +30 PERIODS**

**OUTCOMES:**

**Upon Completion of the course, the students will be able to:**

- Learn the basic concepts and principles of CMOS.
- Learn the techniques of reducing power consumption
- Know about advanced and special techniques for low power systems
- Learn about the techniques involved in power estimation

- Know about software design for Low Power.

**OBJECTIVES:**

- To learn the fundamentals of real time operating systems.
- To gain knowledge on VHDL and Verilog HDL.
- To learn flash controller programming.
- To design implementation of digital logic using FPGA.

**LIST OF EXPERIMENTS**

1. Design and Simulation of CMOS Memory Cell using SPICE. Testing RTOS environment and system programming
2. Design and Simulation of NMOS and CMOS Logic Gates using SPICE
3. Designing of wireless network using embedded systems
4. Implementation of ARM with FPGA
5. Design and Implementation of ALU in FPGA using VHDL and Verilog
6. Modeling of Sequential Digital system using Verilog and VHDL
7. Flash controller programming - data flash with erase, verify and fusing
8. System design using ASIC
9. Design, simulation and analysis of signal integrity.
10. Mini Project

**TOTAL: 60 PERIODS****OUTCOMES:****After Completion of the course, the students will be able to:**

- Understand RTOS and microcontroller.
- Design and check flash controller program.
- Understand wireless data transmission
- Design a system using ASIC
- Design and implementation of digital circuits using FPGA.

**OBJECTIVES:**

- To introduce the basics of digital image processing.
- To learn applications of segmentation with texture analysis
- To introduce theory of Feature extraction
- To acquire the concept of image fusion
- To study the applications of image processing

**UNIT I FUNDAMENTALS OF DIGITAL IMAGE PROCESSING 9**

Elements of visual perception, brightness, contrast, hue, saturation, mach band effect, 2D image transforms- DFT, DCT, KLT, and SVD. Image enhancement in spatial and frequency domain, Review of morphological image processing

**UNIT II SEGMENTATION AND TEXTURE ANALYSIS 9**

Edge Linking and Boundary Detection - Local Processing-Global Processing –Thresholding- Segmentation by Morphological Watershed Segmentation Algorithm - Use of Markers- Use of Motion in Segmentation- Spatial Techniques-Frequency Domain Techniques-Texture- Statistical, Syntactic and Hybrid texture description - texture recognition and applications

**UNIT III FEATURE EXTRACTION 9**

First and second order edge detection operators, Phase congruency, Localized feature extraction detecting image curvature, shape features Hough transform, shape skeletonization, Boundary descriptors, Moments, Texture descriptors- Autocorrelation, Co-occurrence features, Run length features, Fractal model based features, Gabor filter, wavelet features

**UNIT IV REGISTRATION AND IMAGE FUSION 9**

Registration- Preprocessing, Feature selection-points, lines, regions and templates Feature correspondence- Point pattern matching, Line matching, and region matching Template matching. Transformation functions- Similarity transformation and Affine Transformation - Resampling- Nearest Neighbor and Cubic Splines Image Fusion-Overview of image fusion, pixel fusion, Multiresolution based fusion discrete wavelet transform, Curvelet transform - Region based fusion.

## **UNIT V IMAGE PROCESSING APPLICATIONS**

**9**

Image compression- JPEG, JPEG2000 and MPEG standards- Watermarking-Steganography-3D vision tasks- Marr's theory, active and purposive vision- Geometry for 3D vision-Use of 3D vision-Shape from X-shape - motion, texture- Full 3D objects.

**TOTAL: 45 PERIODS**

### **OUTCOMES:**

**After Completion of the course, the students will be able to:**

- Learn the Basic Concepts of image processing
- Understand the working and applications of segmentation.
- Learn about 3D image visualization and image processing applications
- Know about working of image fusion

### **REFERNCES**

3. [www.nptel.ac.in/courses/117105079](http://www.nptel.ac.in/courses/117105079)

**OBJECTIVES:**

- To understand the fundamentals of Vector Analysis.
- To learn the concepts of multi resolution analysis.
- To study the properties of continuous wavelet transforms.
- To characterize Filter Bank and Sub Band Coding Principles.
- To study the various Image Compression Techniques.

**UNIT I MATHEMATICAL FUNDAMENTALS****9**

Linear spaces – Vectors and vector spaces – Basis functions – Dimensions –Orthogonality and bi-orthogonality– Local basis and Riesz basis – Discrete linear normed space – Approximation by orthogonal projection –Matrix algebra and linear transformation..

**UNIT II MULTI RESOLUTION ANALYSIS****9**

Definition of Multi Resolution Analysis (MRA) – Haar Basis – Construction of General Orthonormal MRA – Wavelet Basis for MRA – Continuous Time MRA Interpretation for the DTWT – Discrete Time MRA – Basis Functions for the DTWT – PRQMF Filter Banks.

**UNIT III CONTINUOUS WAVELET TRANSFORMS****9**

Wavelet Transform – Definition and Properties – Concept of Scale and its Relation with Frequency – Continuous Wavelet Transform (CWT) – Scaling Function and Wavelet Functions (Daubechies Coiflet, Mexican Hat, Sinc, Gaussian, Bi Orthogonal) – Tiling of Time – Scale Plane for CWT.

**UNIT IV DISCRETE WAVELET TRANSFORMS****9**

Filter Bank and Sub Band Coding Principles – Wavelet Filters – Inverse DWT Computation by Filter Banks – Basic Properties of Filter Coefficients – Choice of Wavelet Function Coefficients – Derivations of Daubechies Wavelets – Mallat's Algorithm for DWT – Multi Band Wavelet Transforms Lifting Scheme- Wavelet Transform Using Poly phase Matrix Factorization –Geometrical Foundations of Lifting Scheme – Lifting Scheme in Z –Domain.

## **UNIT V            TRANSFORMS AND ITS APPLICATIONS**

**9**

Wavelet methods for signal processing- Image Compression Techniques: EZW–SPHIT Coding –Image Denoising Techniques: Noise Estimation – Shrinkage Rules – Shrinkage Functions – Edge Detection and Object Isolation, Image Fusion, and Object Detection.

**TOTAL: 45 PERIODS**

### **OUTCOMES**

**After Completion of the course, the students will be able to:**

- Apply the fundamentals of Vector Analysis.
- Know the concepts of multi resolution analysis.
- Understand the properties of continuous wavelet transforms.
- Apply the knowledge of Filter Bank and Sub Band Coding Principles.
- Understand the various Image Compression Techniques.

**PAE15153**

**SOFT COMPUTING**

**3 0 0 3**

**OBJECTIVES:**

- To study different types of optimization techniques
- To study genetic algorithms
- To gain knowledge in neural networks
- To study and analyze fuzzy logic
- To understand the Neuro fuzzy modeling

**UNIT I          EVOLUTION OF COMPUTING**

**9**

Evolution of Computing - Soft Computing Constituents – From Conventional AI to Computational Intelligence - Machine Learning Basics

**UNIT II          GENETIC ALGORITHMS**

**9**

Introduction, Building block hypothesis, working principle, Basic operators and Terminologies like individual, gene, encoding, fitness function and reproduction, Genetic modeling: Significance of Genetic operators, Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, GA optimization problems, JSP (Job Shop Scheduling Problem), TSP (Travelling Salesman Problem), Differences & similarities between GA & other traditional methods, Applications of GA.

**UNIT III          NEURAL NETWORKS**

**9**

Machine Learning using Neural Network, Adaptive Networks – Feed Forward Networks– Supervised Learning Neural Networks – Radial Basis Function Networks - Reinforcement Learning– Unsupervised Learning Neural Networks – Adaptive Resonance Architectures – Advances in Neural Networks

**UNIT IV          FUZZY LOGIC AND SIMULATED ANNEALING**

**9**

Fuzzy Sets – Operations on Fuzzy Sets – Fuzzy Relations – Membership Functions-Fuzzy Rules and Fuzzy Reasoning – Fuzzy Inference Systems – Fuzzy Expert Systems – Fuzzy Decision Making, Annealing, Boltzmann machine – learning – application – Counter Propagation Network – architecture – training - Applications

**UNIT V          ADVANCED NEURO-FUZZY MODELING**

**9**

Adaptive Neuro-Fuzzy Inference Systems – Coactive Neuro-Fuzzy Modeling – Classification and Regression Trees – Data Clustering Algorithms – Rule base Structure Identification – Neuro-Fuzzy Control – Case Studies.

**TOTAL: 45 PERIODS**

**OUTCOMES:**

**After Completion of the course, the students will be able to:**

- Have insight into the fundamentals of soft computing
- Understand the genetic algorithm
- Design the neural networks
- Perform advanced Neuro-Fuzzy Modeling

**PAE15154      COMPUTER ARCHITECTURE AND PARALLEL PROCESSING      3 0 0 3**

**OBJECTIVES:**

- To know the basics of computer design and performance measures
- To introduce the concepts parallel processing and pipelining
- To educate about hardware technologies
- To gain knowledge about multiprocessors
- To introduce Multicore architectures

**UNIT I      THEORY OF PARALLELISM      9**

Fundamentals of Computer Design – Parallel and Scalable Architectures – Multiprocessors – Multi vector and SIMD architectures – Multithreaded architectures – Data-flow architectures - Performance Measures

**UNIT II      PARALLEL PROCESSING, PIPELINING AND ILP      9**

Instruction Level Parallelism and Its Exploitation - Concepts and Challenges - Overcoming Data Hazards with Dynamic Scheduling – Dynamic Branch Prediction - Speculation - Multiple Issue Processors - Performance and Efficiency in Advanced Multiple Issue Processors

**UNIT III      HARDWARE TECHNOLOGIES      9**

Processor and memory hierarchy advanced processor technology, superscalar and vector processors, memory hierarchy technology, virtual memory technology- Bus cache and Shared Memory - backplane bus systems, cache memory organizations, shared memory organizations, sequential and weak consistency models, Pipelining and superscalar Techniques.

**UNIT IV      MULTIPROCESSORS      9**

Symmetric and distributed shared memory architectures – Cache coherence issues – Performance Issues – Synchronization issues – Models of Memory Consistency - Interconnection networks – Buses, crossbar and multi-stage switches.

**UNIT V      MULTI-CORE ARCHITECTURES      9**

Software and hardware multithreading – SMT and CMP architectures – Design issues – Case studies –Intel Multi-core architecture – SUN CMP architecture – IBM cell architecture - hp architecture.

**OUTCOMES:**

**At the end of the course, the students will be able to:**

- Learn the computer design Concepts
- Understand the parallel processing and pipelining
- Gain knowledge in memory hierarchy design
- Learn about multiprocessors and the multi-core architecture

**PAE15251**

**CAD FOR VLSI CIRCUITS**

**3 0 0 3**

**OBJECTIVES:**

- To introduce the basic CAD algorithm and Partitioning
- To educate about Placement, Floor Planning
- To learn about Global, Detail routing
- To know the Modeling and synthesis in CAD flow.

**UNIT I LOGIC SYNTHESIS & BASIC CAD ALGORITHMS**

**9**

Introduction to combinational logic synthesis - Binary Decision Diagram - Hardware models for High-level synthesis - graph algorithms - computational geometry algorithms.

**UNIT II PARTITIONING**

**9**

Classification of partitioning algorithms - Group migration algorithms - simulated annealing & evolution, other partitioning algorithms

**UNIT III PLACEMENT, FLOOR PLANNING & PIN ASSIGNMENT**

**9**

Simulation base placement algorithms, other placement algorithms - constraint based floor planning - floor planning algorithms for mixed block & cell design - General & channel pin assignment for register minimization, Global routing - Algorithms for global routing

**UNIT IV ROUTING**

**9**

Classification of global routing algorithms - Maze routing algorithm - line probe algorithm - Steiner Tree based algorithms - ILP based approaches-classification of routing algorithms - single layer routing algorithms, two layer channel routing algorithms, three layer channel routing algorithms, and switchbox routing algorithms.

**UNIT V SYSTEM MODELING ALGORITHMS**

**9**

High level Synthesis - Hardware models - Internal representation - Allocation - Assignment and scheduling - Simple scheduling algorithm - Assignment problem – High level transformations

**TOTAL: 45 PERIODS**

## **OUTCOMES:**

**After Completion of the course, the students will be able to:**

- Explain the fundamentals of basic algorithm in CAD.
- Analyze the different partitioning algorithm.
- Know about Floor planning and Placement algorithm.
- Understand about different routing algorithms, Modeling and synthesis techniques of CAD.

**OUTCOMES:**

**After Completion of the course, the students will be able to:**

- Understand Continuous time System Controllers
- Gain knowledge about Signal Processing in Digital Control
- Design Digital Control Algorithms
- Explain State Variable Techniques
- Know about Controllability, Observability and Stability

**PAE15253**

**MOBILE NETWORKS**

**3 0 0 3**

**OBJECTIVES:**

- To study architecture and characteristics in cellular networks
- To explore enabling wireless technologies with mobile networks
- To understand Mobile IP and TCP protocols
- To explore issues and challenges in multicast routing in ad-hoc networks

**UNIT I CELLULAR CONCEPT**

**9**

Introduction – Frequency reuse – Channel assignment strategies – Handoff strategies – Interference – Trunking – Improving coverage and capacity in cellular systems.

**UNIT II WIRELESS LAN**

**9**

Infrared vs. radio transmission- Infrastructure and Ad-hoc network – IEEE 802.11 – HIPERLAN –Bluetooth.

**UNIT III MOBILE NETWORK LAYER**

**9**

Mobile IP : Goals – Assumptions and Requirement – Entities – IP packet Delivery- Agent advertisement and Discovery – Registration – Tunneling and Encapsulation – Optimization – Reverse Tunneling – IPv6 – DHCP- Ad hoc Networks

**UNIT IV MOBILE TRANSPORT LAYER**

**9**

Traditional TCP- Indirect TCP- Snooping TCP- Mobile TCP- Fast retransmit/ Fast Recovery- Transmission/ Timeout Freezing – Selective Retransmission- Transaction Oriented TCP , TCP over 2.5/3G wireless networks.

**UNIT V MULTICAST ROUTING IN AD-HOC WIRELESS NETWORKS**

**9**

Introduction – Issues in designing a multicast routing protocol – Operations of multicast routing protocols- Tree based multicast routing protocols – Mesh based multicast routing protocol – Application Dependent multicast routing.

**TOTAL: 45 PERIODS**

**OUTCOMES:**

**After completion of the course, the student should be able to:**

- Ability to identify the various challenges and vulnerabilities in cellular networks
- Understand and recognize techniques of various wireless technologies
- Analyze the solutions for configuration of mobile networks
- Explain TCP protocols in mobile environment
- Analyze the solutions for multicast routing protocols for different applications.

3. [www.powershow.com](http://www.powershow.com)

**OBJECTIVES:**

- To introduce the basic Science of Measurement
- To introduce resistive sensors
- To learn the reactive sensors and self-generating sensors
- To study about digital sensor and semiconductor device sensors

**UNIT I CHARACTERISTICS OF MEASUREMENT SYSTEMS 9**

Introduction to measurement systems: general concepts and terminology, measurement systems, sensor classification, general input-output configuration, methods of correction performance characteristics: static characteristics of measurement systems, accuracy, precision, sensitivity, other characteristics: linearity, resolution, systematic errors, random errors, dynamic characteristics of measurement systems: zero-order, first-order, and second-order measurement systems and response.

**UNIT II RESISTIVE SENSORS 9**

Resistive sensors: potentiometers, strain gages and types, resistive temperature detectors (RTDs), thermistors, magneto resistors, light-dependent resistors (LDRs); Signal conditioning for resistive sensors: measurement of resistance, voltage, Wheatstone bridge. Balance and deflection measurements, sensor bridge calibration and compensation instrumentation amplifiers, interference types and reduction

**UNIT III REACTIVE SENSORS 9**

Reactance variation and electromagnetic sensors : capacitive sensors – variable & differential, inductive sensors – reluctance variation, eddy current, linear variable differential transformers (LVDTs) , variable transformers: synchros, resolvers, inductosyn , magneto elastic sensors, electromagnetic sensors – sensors based on faraday’s law, hall effect sensors, Signal conditioning for reactance variation sensors : problems and alternatives, ac bridges, carrier amplifiers – application to the LVDT, variable oscillators, resolver-to-digital and digital-to-resolver converters

**UNIT IV MEASURING DEVICES 9**

Capacitive Impedance and Piezoelectric Hygrometers - Differential Pressure, U-tube and ultrasonic Densitometers - pH measurement: Ion Selective Type - Radiation Fundamentals-Radiation Detectors-Radiation Thermometers - Optical Pyrometers

## **NIT V            DIGITAL SENSORS**

**9**

Position encoders, variable frequency sensors-quartz digital thermometer, SAW sensors, digital flow meters, sensors based on semiconductor junctions: thermometers based on semiconductor junctions, magneto diodes and magneto transistors, photodiodes and phototransistors, charge-coupled sensors.

**TOTAL: 45 PERIODS**

### **OUTCOMES:**

**After completion of the course, the student should be able to:**

- Gain knowledge on basic characteristics of measurement systems
- Know the functionality of resistive sensors and reactive sensors
- Understand the digital sensor and semiconductor device sensors

**PAE15351                      VLSI DESIGN TECHNIQUES                      3 0 0 3**

**OBJECTIVES:**

- To study basics of MOS transistor and IC fabrication.
- To learn inverters characteristics and logic function.
- To learn circuit characterization and performance estimation.
- To study VLSI circuits.
- To learn Verilog HDL and design VLSI circuits.

**UNIT I                      VLSI DESIGN PROCESS AND MOS TRANSISTOR THEORY                      9**

VLSI Design Process – Architectural Design – Logical Design – Physical Design – Layout Styles –Full custom, Semicustom approaches.MOS transistors, CMOS logic, MOS transistor theory – Introduction, Enhancement mode transistor action, Ideal I-V characteristics, Simple MOS capacitance Models, Detailed MOS gate capacitance model, Detailed MOS Diffusion capacitance model, Non ideal I-V effects, DC transfer characteristics, VLSI Design flow.

**UNIT II                      INVERTERS AND LOGIC GATES                      9**

NMOS and CMOS Inverters, Stick diagram, Inverter ratio, DC and transient characteristics , switching times, Super buffers, Driving large capacitance loads, CMOS logic structures , Transmission gates, Static CMOS design, dynamic CMOS design.

**UNIT III                      CIRCUIT CHARACTERIZATION AND PERFORMANCE ESTIMATION                      9**

Resistance estimation, Capacitance estimation, Inductance, switching characteristics, transistor sizing, power dissipation and design margining, Charge sharing - Scaling

**UNIT IV                      VLSI SYSTEM COMPONENTS CIRCUITS                      9**

Multiplexers, Decoders, comparators, priority encoders, Shift registers- Arithmetic circuits – Ripple carry adders, Carry look ahead adders, High-speed adders, Multipliers.

**UNIT V                      VERILOG HARDWARE LANGUAGE                      9**

Overview of digital design with Verilog HDL, hierarchical modeling concepts, modules and port definitions, gate level modeling, data flow modeling, behavioral modeling, task & functions, Test Bench.

**TOTAL: 45 PERIODS**

### **OUTCOMES:**

**Upon Completion of the course, the students will be able to:**

- Understand basics of MOS transistor and IC fabrication, inverters characteristics and logic function.
- Explain circuit characterization and performance estimation.
- Understand the concepts of VLSI circuits.
- Understand Verilog HDL and design VLSI circuits.

**PAE15352**

**FIBER OPTIC SENSORS**

**3 0 0 3**

**OBJECTIVES:**

- To understand sensor technology and basic concepts of grating sensor
- To know about distributed and magnetic sensors.
- To learn about chemical and Biosensors
- To study the applications of sensors

**UNIT I            SENSOR TECHNOLOGY**

**9**

The Emergence of Fiber Optic Sensor Technology-Optical Fibers-Light Sources-Optical Detectors- Optical Modulators- Intensity modulated sensors, Microbendstrain intensity modulated sensor, Liquid level type hybrid sensor, internal effect intensity modulated sensor, Diffraction grating sensors and Interferometric sensors-Fabryperot, Mach Zender, Michelson and Sagnac sensors,

**UNIT II            GRATING SENSORS**

**9**

Multimode Grating and Polarization Sensors-Sensors Based on Relative Movement of Opposed Gratings- Grating Period Modulation-Sensors Based on the Photo elastic Effect-Retardation Plates- Fiber Grating Sensors

**UNIT III            DISTRIBUTED AND MAGNETIC SENSORS**

**9**

Fiber Optic distributed and Magnetic Sensor-Distributed Sensing- Basic Principles of Sensor Multiplexing- Interferometric Sensor Multiplexing- Faraday effect sensors- Magnetostrictive – Lorentz force sensors- Evanescent Field Absorption Sensors

**UNIT IV            CHEMICAL AND BIOSENSOR**

**9**

Fiber Optic Chemical and Biosensor: Reagent Mediated sensor-Humidity sensor – pH sensor -Hydrogen sensor - CO<sub>2</sub> sensor – Ammonia sensor - Chloride sensor – Glucose sensor – Oxygen sensor - Surface Plasmonic Resonance based sensor

**UNIT V            APPLICATIONS**

**9**

Industrial Applications of Fiber Optic Sensors : Temperature – Pressure - fluid level – flow – position - vibration - rotation measurements - Current -voltage measurement - Chemical analysis. Introduction to smart structures - Applications –skins

**TOTAL: 45 PERIODS**

### **OUTCOMES:**

**After completion of the course, the student should be able to:**

- Know the sensor technology
- Know the sensor concepts of grating sensor
- Know the sensor magnetic sensors.
- Know the sensor and biosensor.
- Study the application of sensor.

**PAE15353          DIGITAL SIGNAL PROCESSING INTEGRATED CIRCUITS          3 0 0 3**

**OBJECTIVES:**

- To familiarize the Number systems concept and Arithmetic UNITS
- To understand the concepts of Digital signal processing.
- To study the concepts & gain knowledge about digital filters.
- To study DSP architectures.
- To understand the Design of DSP integrated circuit.

**UNIT I          NUMBER SYSTEMS AND ARITHMETIC UNITS          9**

Conventional Number system - Redundant Number system - Residue Number System - Bit Parallel and Bit Serial Arithmetic - Distributed arithmetic - Basic Shift Accumulator - Reducing the memory size - Complex multipliers - improved shift-Accumulator

**UNIT II          DIGITAL SIGNAL PROCESSING          9**

Digital signal processing, Sampling of analog signals - Selection of sample frequency - Signal-processing systems - Frequency response - Transfer functions - Signal flow graphs - Filter structures - Adaptive DSP algorithms - DFT-The Discrete Fourier Transform - FFT-The Fast Fourier Transform Algorithm, Image coding - Discrete cosine transforms.

**UNIT III          DIGITAL FILTERS AND FINITE WORD LENGTH EFFECTS          9**

FIR filters - FIR filter structures - FIR chips - IIR filters - Specifications of IIR filters - Mapping of analog transfer functions - Mapping of analog filter structures - Multirate systems - Interpolation with an integer factor L - Sampling rate change with a ratio L/M - Multirate filters - Finite word length effects -Parasitic oscillations - Scaling of signal levels - Round-off noise- measuring round-off noise- Coefficient sensitivity- Sensitivity and noise

**UNIT IV          DSP INTEGRATED CIRCUITS AND VLSI CIRCUIT TECHNOLOGIES 9**

Standard digital signal processors - Application specific IC's for DSP - DSP systems - DSP system design - Integrated Circuits design - MOS transistors - MOS Logic - VLSI Process technologies - Trends in CMOS

technologies

## **UNIT V          DSP ARCHITECTURES AND SYNTHESIS OF DSP ARCHITECTURES    9**

DSP system architectures - Standard DSP architecture - Ideal DSP architectures - Multiprocessors and multicomputers - Systolic and Wave front arrays - Shared memory architectures - Mapping of DSP algorithms onto hardware - Implementation based on complex PEs - Shared memory architecture with Bit – serial PEs.

**TOTAL: 45 PERIODS**

### **OUTCOMES:**

**Upon Completion of the course, the students will be able to:**

- Understand the concepts of DSP
- Design digital filters and understand the finite word length effects in the same
- Understand DSP architectures.
- Explain DSP integrated circuit and VLSI circuit technologies

**OBJECTIVES:**

- To learn RF design and circuit board components
- To understand various impedance transformers and biasing networks
- To study the basic RF components
- To acquire knowledge of RF filters and RF synthesizer.
- To study the basic RF mixers and oscillators

**UNIT I CMOS PHYSICS, TRANSCEIVER SPECIFICATIONS AND ARCHITECTURES 9**

CMOS: Introduction to MOSFET Physics – Noise: Thermal, shot, flicker, popcorn noise Transceiver Specifications: Two port Noise theory, Noise Figure, THD, IP2, IP3, Sensitivity, SFDR, Phase noise - Specification distribution over a communication link Transceiver Architectures: Receiver: Homodyne, Heterodyne, Image reject, Low IF Architectures – Transmitter: Direct up conversion, Two step up conversion.

**UNIT II IMPEDANCE MATCHING AND AMPLIFIERS 9**

S-parameters with Smith chart – Passive IC components - Impedance matching networks Amplifiers: Common Gate, Common Source Amplifiers – OC Time constants in bandwidth estimation and enhancement – High frequency amplifier design Low Noise Amplifiers: Power match and Noise match – Single ended and Differential LNAs – Terminated with Resistors and Source Degeneration LNAs.

**UNIT III FEEDBACK SYSTEMS AND POWER AMPLIFIERS 9**

Feedback Systems: Stability of feedback systems: Gain and phase margin, Root-locus techniques – Time and Frequency domain considerations – Compensation Power Amplifiers: General model – Class A, AB, B, C, D, E and F amplifiers – Linearization Techniques – Efficiency boosting techniques – ACPR metric – Design considerations.

**UNIT IV PLL AND FREQUENCY SYNTHESIZERS 9**

PLL: Linearised Model – Noise properties – Phase detectors – Loop filters and Charge pumps Frequency Synthesizers: Integer-N frequency synthesizers – Direct Digital Frequency synthesizers.

## **UNIT V MIXERS AND OSCILLATORS**

**9**

Mixer: characteristics – Non-linear based mixers: Quadratic mixers – Multiplier based mixers: Single balanced and double balanced mixers – sub sampling mixers Oscillators: Describing Functions, Colpitt's oscillators – Resonators – Tuned Oscillators – Negative resistance oscillators – Phase noise.

**TOTAL: 45 PERIODS**

### **OUTCOMES:**

**After Completion of the course, the students will be able to:**

- Understand various RF issues.
- Gain Knowledge on impedance transformation.
- Know about active RF component, matching and biasing networks
- Understand the concepts of RF filter design and their implementation using software.
- Explain the operation of RF oscillators and mixers and their design.

**PAE15451                      PHYSICAL DESIGN OF VLSI CIRCUITS                      3 0 0 3**

**OBJECTIVES:**

- To gain knowledge of basic rules of layout and cell generations.
- To study about the placement and floor sizing.
- To learn about the multiple partition, routing and how to increase the layout performance.
- To improve the performance in the layout design.
- To acquire knowledge about Cell Partition and generation.

**UNIT I                      REVIEW OF VLSI TECHNOLOGY                      9**

Layout Rules-Circuit abstraction Cell generation using programmable logic array transistor chaining, Weinberger arrays and gate matrices-layout of standard cells gate arrays and sea of gates, field programmable gate array(FPGA)-layout methodologies Packaging-Computational Complexity- Algorithmic Paradigms

**UNIT II                      PLACEMENT USING TOP-DOWN APPROACH                      9**

Partitioning: Approximation of Hyper Graphs with Graphs, Kernighan-Lin Heuristic Ratio cut- partition with capacity and i/o constraints. Floor planning: Rectangular dual floor planning- hierarchical approach simulated annealing- Floor plan sizing Placement: Cost function- force directed method- placement by simulated annealing partitioning placement- module placement on a resistive network – regular placement linear placement.

**UNIT III                      ROUTING USING TOP DOWN APPROACH                      9**

Fundamentals: Maze Running- line searching- Steiner trees Global Routing: Sequential Approaches hierarchical approaches- multi commodity flow based techniques- Randomized Routing- One Step approach- Integer Linear Programming Detailed Routing: Channel Routing- Switch box routing. Routing in FPGA: Array based FPGA- Row based FPGAs

**UNIT IV                      PERFORMANCE ISSUES IN CIRCUIT LAYOUT                      9**

Delay Models: Gate Delay Models- Models for interconnected Delay- Delay in RC trees. Timing – Driven Placement: Zero Stack Algorithm- Weight based placement- Linear Programming Approach Timing riving Routing: Delay Minimization- Click Skew Problem- Buffered Clock Trees. Minimization: constrained via Minimization unconstrained via Minimization- Other issues in minimization

## **UNIT V            LAYOUT DESIGN AND TOOLS**

**9**

Transistor structures, Wires and Vias, Scalable Design rules, Layout Design tools. Logic Gates & Layouts: Static Complementary Gates, Switch Logic, Alternative Gate circuits, Low power gates, Resistive and Inductive interconnect delays.

**TOTAL: 45 PERIODS**

### **OUTCOMES:**

**After completion of the course, the student should be able to:**

- Design, simulate, built on an abstract functional specification.
- Partition the layout easily for the design of PCB Boards in accurate manner using many approaches.
- Discover the debug complex combinational and sequential circuits based on an abstract functional specification.
- Perform the cell partition and generation.
- Learn about the routing of the cell.

**OBJECTIVES:**

- To understand the basic concepts of DSP algorithms.
- To know about the Folding & unfolding concepts
- To analyze the various pipelining and parallel processing techniques.
- To analyze the retiming and unfolding algorithms for various DSP applications.
- To Analyze the concept of various filters

**UNIT I INTRODUCTION TO DSP SYSTEMS****9**

Introduction To DSP Systems -Typical DSP algorithms; Iteration Bound – data flow graph representations, loop bound and iteration bound, Longest path Matrix algorithm; Pipelining and parallel processing – Pipelining of FIR digital filters, parallel processing, pipelining and parallel processing for low power.

**UNIT II RETIMING, FOLDING AND UNFOLDING****9**

Retiming - definitions and properties Retiming techniques; Unfolding – an algorithm for Unfolding, properties of unfolding, sample period reduction and parallel processing application; Folding – Folding transformation – Register minimizing techniques – Register minimization in folded architectures.

**UNIT III FAST CONVOLUTION****9**

Fast convolution – Cook-Toom algorithm, modified Cook-Toom algorithm –Iterated Convolution – Cyclic Convolution; Pipelined and parallel recursive and adaptive filters – inefficient/efficient single channel interleaving, Look- Ahead pipelining in first- order IIR filters, Look-Ahead pipelining with power-of-two decomposition parallel processing of IIR filters, combined pipelining and parallel processing of IIR filters, pipelined adaptive digital filters, relaxed look-ahead, pipelined LMS adaptive filter.

**UNIT IV BIT-LEVEL ARCHITECTURE AND SYSTOLIC ARRAY DESIGN****9**

Bit-Level Arithmetic Architectures- parallel multipliers with sign extension, parallel carry-ripple array multipliers, parallel carry-save multiplier, 4x 4 bit Baugh- Wooley carry-save multiplication tabular form and implementation, design of Lyon's bit-serial multipliers using Horner's rule, bit-serial FIR filter, CSD representation, CSD multiplication using Horner's rule for precision improvement. Systolic array design methodology – FIR systolic Arrays – selection of scheduling vector-matrix multiplication and 2D systolic array design-Systolic design for space representations containing Delays

## **UNIT V PROGRAMMING DIGITAL SIGNAL PROCESSORS**

**9**

Synchronous, Wave and asynchronous pipelining- synchronous pipelining and clocking styles, clock skew in edge-triggered single-phase clocking, two-phase clocking, wave pipelining, asynchronous pipelining bundled data versus dual rail protocol; Programming Digital Signal Processors – general architecture with important features; Low power Design – needs for low power VLSI chips, charging and discharging capacitance, short-circuit current of an inverter, CMOS leakage current, basic principles of low power design.

**TOTAL: 45 PERIODS**

### **OUTCOMES:**

**Upon Completion of the course, the students will be able to:**

- Understand the basic concepts of DSP algorithms.
- Analyze pipelining and other parallel processing techniques
- Perform digital signal processor programming.

## PAE15453 SOLID STATE DEVICE MODELING AND SIMULATION

3 0 0 3

### OBJECTIVES:

- To understand the basic semiconductor physics,
- To understand basic concepts bipolar device modeling
- To understand the operation of MOSFET modeling.
- To study the parameter measurement and optoelectronic device modeling

### UNIT I BASIC SEMICONDUCTOR PHYSICS

9

Quantum Mechanical Concepts, Carrier Concentration, Transport Equation, Band gap, Mobility and Resistivity, Carrier Generation and Recombination, Avalanche Process, Noise Sources - Diodes : Forward and Reverse biased junctions – Reverse bias breakdown – Transient and AC conditions — Static and Dynamic behavior- Small and Large signal models – SPICE model for a Diode – Temperature and Area effects on Diode Model Parameters.

### UNIT II BIPOLAR DEVICE MODELING

9

Transistor Models: BJT – Transistor Action – Minority carrier distribution and Terminal currents - Switching- Eber - Molls and Gummel Poon Model, SPICE modeling - temperature and area effects.

### UNIT III MOSFET MODELING

9

OS Transistor – NMOS, PMOS – MOS Device equations - Threshold Voltage – Second order effects - Temperature Short Channel and Narrow Width Effect, Models for Enhancement, Depletion Type MOSFET, CMOS Models in SPICE.

### UNIT IV PARAMETER MEASUREMENT

9

Bipolar Junction Transistor Parameter – Static Parameter Measurement Techniques – Large signal parameter Measurement Techniques, Gunmel Plots, MOSFET: Long and Short Channel Parameters, Measurement of

Capacitance.

## **UNIT V OPTOELECTRONIC DEVICE MODELING**

**9**

Static and Dynamic Models, Rate Equations, Numerical Technique, Equivalent Circuits, Modeling of LEDs, Laser Diode and Photo detectors.

**TOTAL: 45 PERIODS**

### **OUTCOMES:**

**Upon Completion of the course, the students will be able to:**

- Know the fundamental of physics and BJT modeling
- Understand MOSFET modeling and optoelectronic Device Modeling
- Explain parameter measurement

**PAE15454**

**HIGH PERFORMANCE NETWORKS**

**3 0 0 3**

**OBJECTIVES:**

- To develop a comprehensive understanding of multimedia networking applications
- To study the types of VPN and tunneling protocols for security.
- To learn about network security in many layers and network management.
- To understand various Network security and management

**UNIT I SWITCHING AND ROUTING**

**9**

Review of OSI, TCP/IP; Multiplexing, Modes of Communication, Switching, Routing - SONET –DWDM – DSL – ISDN – BISDN, ATM, Architecture of 802.11

**UNIT II MULTIMEDIA NETWORKING APPLICATIONS**

**9**

Streaming stored Audio and Video – Best effort service – protocols for real time interactive applications – Beyond best effort – scheduling and policing mechanism – integrated services –RSVP- differentiated services.

**UNIT III ADVANCED NETWORKS CONCEPTS**

**9**

VPN-Remote-Access VPN, site-to-site VPN, Tunneling to PPP, Security in VPN.MPLS- operation, Routing, Tunneling and use of FEC, Traffic Engineering, MPLS based VPN, overlay networks- P2P connections.

**UNIT IV CONGESTION AND TRAFFIC MODELING**

**9**

Effects of congestion, Congestion control, Little’s theorem, Need for modeling, Poisson modeling and its failure, Non- poisson models, ABR traffic management, GBR traffic Management, Network performance evaluation.

## **UNIT V NETWORK SECURITY AND MANAGEMENT**

**9**

Principles of cryptography – Authentication – integrity – key distribution and certification – Access control and: fire walls – attacks and counter measures – security in many layers. Infrastructure for network management – The internet standard management framework – SMI, MIB, SNMP, Security and administration – ASN.1

**TOTAL: 45 PERIODS**

### **OUTCOMES:**

**After Completion of the course, the students will be able to**

- Gain a comprehensive understanding on multimedia networking applications
- Know about the types of VPN and tunneling protocols for security
- Understand the various ways of controlling the traffic and its methods
- Explain network security in many layers and network management
