

PAAVAI ENGINEERING COLLEGE, NAMAKKAL – 637 018

AUTONOMOUS

B.E. AGRICULTURE ENGINEERING

CURRICULUM

REGULATION 2015

SEMESTER III

Course Code	Course Title	L	T	P	C
MA15301	Transforms and Boundary Value Problems	3	2	0	4
AI15306	Strength of Materials	3	2	0	4
AI15301	Principles and Practices of Crop Production	3	0	0	3
AI15302	Theory of Machines	3	0	0	3
AI15303	Surveying	3	0	0	3
AI15304	Unit Operations in Agricultural Processing	3	0	0	3
AI15305	Soil Science and Engineering	3	0	0	3
AI15307	Surveying Laboratory	0	0	4	2
AI15308	Crop Husbandry Laboratory	0	0	4	2
EN15301	Business English Course Laboratory	0	0	2	1

SEMESTER IV

Course Code	Course Title	L	T	P	C
MA15403	Probability and Statistics	3	2	0	4
ME15405	Thermodynamics	3	2	0	4
AI15401	Principles of Agricultural Engineering	3	0	0	3
AI15402	Soil and Water Conservation Engineering	3	0	0	3
AI15403	Hydrology and Water Resources Engineering	3	0	0	3
AI15404	Fluid Mechanics and Hydraulics	3	2	0	4
AI15405	Drawing of Farm Structures	0	0	4	2
AI15406	Agricultural Engineering Practices Lab	0	0	4	2
AI15407	Fluid Mechanics and Strength of Materials Laboratory	0	0	4	2

COURSE OBJECTIVES

- To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems.
- To acquaint the student with Fourier transform techniques used in wide variety of situations.
- To introduce the effective mathematical tools for the solutions of partial differential equations that model several physical processes.
- To determine the steady state solution of two-dimensional equation of heat conduction.
- To develop Z transform techniques for discrete time systems.

UNIT I FOURIER SERIES 15

Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Gibb's Phenomenon – Complex form of Fourier Series – Parseval's identity – Harmonic Analysis.

UNIT II FOURIER TRANSFORMS 15

Fourier integral theorem (without proof) – Fourier transform pair – Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.

UNIT III PARTIAL DIFFERENTIAL EQUATIONS 15

Formation of partial differential equations – Lagrange's linear equation – Solutions of standard types of first order partial differential equations - Linear partial differential equations of second and higher order with constant coefficients.

UNIT IV APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS 15

Solutions of one dimensional wave equation – One dimensional equation of heat conduction – Steady state solution of two-dimensional equation of heat conduction.

UNIT V Z - TRANSFORMS AND DIFFERENCE EQUATIONS 15

Z-transforms – Elementary properties – Inverse Z-transform – Convolution theorem – Formation of difference equations – Solution of difference equations using Z-transform.

TOTAL: 75 PERIODS

COURSE OUTCOMES

At the end of the course, the students would

- have gained a well founded knowledge of Fourier series, their different possible forms and the frequently needed practical harmonic analysis that an engineer may have to make from discrete data.

- have grasped the concept of expression of a function, under certain conditions, as a double integral leading to identification of transform pair and specialization on Fourier transform pair, their properties.
- have obtained capacity to formulate and identify certain boundary value problems encountered in engineering practices, decide on applicability of the Fourier series method of solution, solve them and interpret the results.
- be capable of mathematically formulating certain practical problems in terms of partial differential equations, solve them and physically interpret the results.
- have learnt the basics of Z – transform in its applicability to discretely varying functions, gained the skill to formulate certain problems in terms of difference equations and solve them using the Z – transform technique bringing out the elegance of the procedure involved.

COURSE OBJECTIVES

- To impart knowledge in the fundamental concepts of stress and strain in mechanics of solids and structures.
- To estimate the stresses developed in bars, beams, shafts, cylinders and spheres.
- To understand torsion formulation stresses and deformation
- To study methods and theorems in deflection of beams
- To develop and analyse problem solving skill related to mechanical elements

UNIT I STRESS, STRAIN AND DEFORMATION OF SOLIDS 15

Rigid bodies and deformable solids – Tension, Compression and Shear Stresses – Deformation of simple and compound bars – Thermal stresses – Elastic constants – Volumetric strains – Stresses on inclined planes – principal stresses and principal planes – Mohr's circle of stress.

UNIT II TRANSVERSE LOADING ON BEAMS AND STRESSES IN BEAM 15

Beams – types transverse loading on beams – Shear force and bending moment in beams – Cantilevers – Simply supported beams and over – hanging beams. Theory of simple bending– bending stress distribution – Load carrying capacity – Proportioning of sections – Flitched beams – Shear stress distribution.

UNIT III TORSION 15

Torsion formulation stresses and deformation in circular and hollow shafts – Stepped shafts– Deflection in shafts fixed at the both ends – Stresses in helical springs – Deflection of helical springs, carriage springs.

UNIT IV DEFLECTION OF BEAMS 15

Double Integration method – Macaulay's method – Area moment method for computation of slopes and deflections in beams - Conjugate beam and strain energy – Maxwell's reciprocal theorems.

UNIT V THIN CYLINDERS, SPHERES AND THICK CYLINDERS 15

Stresses in thin cylindrical shell due to internal pressure circumferential and longitudinal stresses and deformation in thin and thick cylinders – spherical shells subjected to internal pressure – Deformation in spherical shells – Lamé's theorem.

TOTAL: 75 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- understand the fundamental concepts of stress and strain in mechanics of solids and structures.
- analyse and determine beams and trusses in shear forces, bending moments and axial forces.

- gain sufficient knowledge in designing shafts to transmit required power and also springs for its maximum energy storage capacities.
- calculate the deformation behavior of simple structures.
- analyse the critical problems arrive at solutions related to mechanical elements and the deformation behavior for different types of loads.

TEXTBOOKS

1. Bansal, R.K., "Strength of Materials", Laxmi Publications (P) Ltd., 2007
2. Jindal U.C., "Strength of Materials", Asian Books Pvt. Ltd., New Delhi, 2007

REFERENCES

2. Subramanian R., "Strength of Materials", Oxford University Press, Oxford Higher Education Series,2007.
3. Hibbeler, R.C., "Mechanics of Materials", Pearson Education, Low Price Edition, 2007
4. Ferdinand P. Beer, Russell Johnson, J.r. and John J. Dewole "Mechanics of Materials", Tata McGraw Hill Publishing ,co. Ltd., New Delhi, 2005.

COURSE OBJECTIVES

- To impart knowledge in the basics of Agriculture
- To introduce the students about the regional and seasonal selection of crops
- To gain knowledge in crop water management
- To study the production practices of crops
- To delineate the role of agricultural and irrigation engineers in relation to various crop production practices.

UNIT I AGRICULTURE AND CROP PRODUCTION 9

Introduction to agriculture and its crop production sub-sectors - field crop production and horticulture; Factors affecting crop growth and production: genetic (internal) and environmental (external) factors; Crop management through environmental modification and adaptation of crops to the existing environment through crop cultural practices

UNIT II CROP SELECTION AND ESTABLISHMENT 9

Regional and seasonal selection of crops; Systems of crop production; Competition among crop plants; Spacing and arrangement of crop plants; Field preparation for crops including systems of tillage; Establishment of an adequate crop stand and ground cover, including selection and treatment of seed, and nursery growing.

UNIT III CROP MANAGEMENT 9

Crop water Management; Crop nutrition management - need for supplementation to soil supplied nutrients, sources, generalized recommendations, methods and timing of application of supplemental nutrients including fertigation scheduling; Crop protection including management of weeds, pests and pathogens; Integrated methods of managing water, nutrients and plant protection; Types and methods of harvest.

UNIT IV PRODUCTION PRACTICES OF AGRICULTURAL CROPS 9

Generalized management and cultivation practices for important groups of field crops in Tamil Nadu: cereal crops, grain legumes, oil seed crops, sugarcane, and fiber crops, and special purpose crops such as those grown for green manure and fodder.

UNIT V PRODUCTION PRACTICES OF HORTICULTURAL CROPS 9

Important groups of horticultural crops in Tamil Nadu such as vegetable crops, fruit crops, flower crops; Cultivation practices of representatives of each group; Special features of production of horticultural crops - green house cultivation.

TOTAL: 45 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- acquire knowledge in factors affecting growth and production of crops
- analyse the regional and seasonal selection of crops
- understand the crop management practices of agricultural crops.
- practice crop management practices of horticultural crops.
- relate agricultural and irrigation engineering in relation to various crop production practices

TEXTBOOKS

1. Reddy T. Sankara G.H. Yellamanda Reddi, Principles of Agronomy, Kalyani Publishers, New Delhi, 1995.
2. Rajendra Prasad, Text Book of Field Crop Production. Directorate of Information and Publication, Krishi Anusandhan Bhavan, Pusa, New Delhi, 2005.
3. Handbook of Agriculture. ICAR Publications, New Delhi.

REFERENCES

3. Shanmugavel, K.G. Production Technology of Vegetable Crops. Oxford India Publications, New Delhi. 1989.
4. Bose T. K. and L.P.Yadav. Commercial Flowers, Nayaprakash, Calcutta.1989.
5. Crop Production Guide, Tamil Nadu Agricultural University Publication, Coimbatore. 2005

COURSE OBJECTIVES

- To introduce the students the theory of machines pertaining to agricultural engineering.
- To study various terminologies used in machines
- To understand concept of sliding and rolling friction
- To impart knowledge in gears
- To delineate the concepts of flywheel and balancing

UNIT I TERMINOLOGY 9

Definitions - Kinematic links - Pairs - Chain - Machines and mechanism - Types and uses –Kinematic inversion of four bar chain and slider crank mechanism. Velocity and acceleration in simple mechanisms - Vector polygon and instantaneous centre methods – Coriolis component of acceleration.

UNIT II FRICTION AND APPLICATIONS 9

Sliding and rolling friction –friction in screw threads-Bearing and lubrication- Friction clutches- Belt drives- Friction aspects in brakes.

UNIT III MOTION OF CAM AND FOLLOWER 9

Cam and follower - types - application – displacement diagrams - profile layout for uniform velocity - Uniform acceleration and retardation - simple harmonic and cycloid motion.

UNIT IV GEARS AND GEAR TRAINS 9

Gears - classification - terminology -law of gearing - tooth profile - interference between rack and pinion. Gear trains - simple - compound reverted. Simple epi-cyclic gear trains.

UNIT V FLYWHEEL AND BALANCING 9

Inertia - turning moment - flywheel - fluctuation of speed and energy. Balancing of rotating masses and reciprocating masses.

TOTAL: 45 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- Gain inputs in the terminologies pertaining to agricultural machineries.
- Acquire basic knowledge in the friction applications, gear and gear trains.
- apply practical utility in sliding and rolling friction
- to know the motion of cam and follower
- to implement ideas of rotating masses and reciprocating masses

TEXTBOOKS

1. Rattan, S.S, Theory of Machines, 3rd Edition, Tata McGraw-Hill, 2009.

COURSE OUTCOMES

At the end of the course the student will be able to

- use all surveying equipments,
- gain knowledge in the principles and classification of chain surveying and ranging
- understand the different types of bearing and traversing
- demonstrate the theodolite, total station and global position system
- prepare LS & CS, contour maps and carryout surveying works related to land and civil engineering projects

TEXT BOOKS

1. James M. Anderson and Edward M. Mikhail, Surveying, Theory and Practice, Seventh Edition, Mc Graw Hill 2001.
2. Bannister and S. Raymond, Surveying, Seventh Edition, Longman 2004.

REFERENCES

1. S.K. Roy, Fundamentals of Surveying, Second Edition, Prentice Hall of India 2004.
2. A.M. Chandra, Plane Surveying, New Age International Publishers 2002.
3. Alak De, Plane Surveying, S. Chand & Company Ltd., 2000.

UNIT V CRYSTALLISATION AND DISTILLATION

9

Crystallization-Equilibrium –Rate of crystal growth stage-Equilibrium crystallization-Crystallizers-Equipment-Classification- Construction and operation – Crystallizers-Tank-Agitated batch- Swenson-Walker and Vacuum crystallizers-Distillation-Binary mixtures-Flash and differential distillation-Steam distillation –Theory-Continuous distillation with rectification –Vacuum distillation - Batch distillation-Operation and process-Advantages and limitation-Distillation equipments- Construction and operation-Factors influencing the operation.

TOTAL: 45 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- Understand scope, importance and key concepts of the agro processing
- Know the fundamentals of various unit operations of Agricultural Processing
- use the processing methods of agricultural produce
- apply the concepts of size reduction
- Know the factors influencing various unit operations in agriculture processing.

TEXTBOOKS

1. Earle, R.L., “Unit operations in Food Processing”, Pergamon Press, Oxford, U.K, 1985.
2. Sahay. K.M. and Singh, K.K., “Unit Operations of Agricultural Processing”, Vikas Publishing House Pvt. Ltd., New Delhi, 2008.
3. McCabe, W.L., and Smith, J.C., “Unit Operations of Chemical Engineering”, Mc-Graw-Hill Inc., Kosaido Printing Ltd., Tokyo, 1990.

REFERENCE

1. Coulson, J.M., and Richardson, J.F., “Chemical Engineering”, Vol. 1, The Pergamonpress New York, 1977.

COURSE OBJECTIVES

- To introduce the fundamental knowledge in soil physical parameters
- To impart knowledge in types and methods of soil survey and interpretative groupings
- To understand the phase relationship and laboratory soil compaction methods
- To gain fundamental knowledge in engineering properties of different types of soil
- To study bearing capacity of different types of soil

UNIT I INTRODUCTION AND SOIL PHYSICS 9

Soil - definition - major components – Soil forming minerals and processes - soil profile –Physical properties - texture – density – porosity – consistence - colour- - specific gravity - capillary and non - capillary - plasticity. Soil air - soil temperature - soil water - classification of soil water - Movement soil water. Soil colloids – organic and inorganic matter - Ion exchange - pH – Plant nutrient availability

UNIT II SOIL CLASSIFICATION AND SURVEY 9

Soil taxonomy – Soils of Tamil Nadu and India. Soil survey - types and methods of soil survey – Field mapping- mapping units - base maps -preparation of survey reports - concepts and uses - land capability classes and subclasses - soil suitability -Problem soils – Reclamation.

UNIT III PHASE RELATIONSHIP AND SOIL COMPACTION 9

Phase relations- Gradation analysis- Atterberg Limits and Indices- Engineering Classification of soil – Soil compaction- factors affecting compaction- field and laboratory methods.

UNIT IV ENGINEERING PROPERTIES OF SOIL 9

Shear strength of cohesive and cohesion-less - Mohr-Coulomb failure theory- Measurement of shear strength, direct shear, Tri-axial and vane shear test- -Permeability- Coefficient of Permeability-Darcy's law-field and lab methods - Assessment of seepage - Compressibility.

UNIT V BEARING CAPACITY AND SLOPE STABILITY 9

Bearing capacity of soils - Factors affecting Bearing Capacity- Shallow foundations-Terzaghi's formula-BIS standards - Slope stability - Analysis of infinite and finite slopes- friction circle method slope protection measures.

TOTAL: 45 PERIODS**COURSE OUTCOMES**

At the end of the course the student will be able to

- gain ideas in fundamentals of soil physical parameters and classification of soils.
- acquire knowledge in the procedures involved in soil survey, field soil mapping and suitability of soil.
- understand the soil compaction and engineering classification of soil.

- analyse engineering properties of soil and darcy law.
- apply the concepts of bearing capacity, slope stability and BIS standard for soil.

TEXTBOOKS

1. Nyle C. Brady, “The Nature and Properties of Soil”, Macmillan Publishing Company, 10th Edition, New York, 2008.
2. Punmia, B.C., “Soil Mechanics and Foundation “Laxmi Publishers, New Delhi, 2007.

REFERENCES

1. Edward J. Plaster., “Soil Science”, Cengage Learning India Ltd, New Delhi, 2009.
2. Arora, K.R. “Soil Mechanics and Foundation Engineering”, Standard Publishers and Distributors, New Delhi, 2007.
3. Murthy, V.N.S. “Soil Mechanics and Foundation Engineering”, UBS Publishers and Distributors, New Delhi, 2007.
4. Sehgal, S.B., “Text Book of Soil Mechanics”, CBS Publishers and Distributors New Delhi, 2007.

COURSE OBJECTIVES

- To provide exposure in various methods and applications of surveying to Agricultural Engineering projects.
- To train the student to acquire skill in operating various surveying instruments
- To develop skill to operate levelling instruments
- To train the student, how to demonstrate the total station and gps
- To study the applications of leveling

LIST OF EXPERIMENTS**1. CHAIN SURVEYING**

- a. Ranging, Chaining and Pacing
- b. Chain traversing

2. COMPASS SURVEYING

- a. Triangulation Problem
- b. Compass traversing

3. PLANE TABLE SURVEYING

- a. Radiation
- b. Intersection - Triangulation problem
- c. Plane table traversing

4. THEODOLITE SURVEYING

- a. Measurement of horizontal & vertical angles
- b. Tangential & Stadia Tacheometry

5. LEVELLING

- a. Fly levelling using Dumpy level
- b. Fly levelling using Tilting level
- c. Check levelling
- d. Block Levelling
- e. Radial Contouring

6. DEMONSTRATION OF TOTAL STATION AND GPS**TOTAL: 60 PERIODS****COURSE OUTCOMES**

At the end of this course, the students will be able to

- use all surveying equipments
- gain knowledge in the principles and classification of chain surveying and ranging

- demonstrate the theodolite, total station and global position system
- understand the different types of bearing and traversing
- prepare LS & CS, contour maps and carryout surveying works related to land and civil engineering projects

COURSE OBJECTIVE

- To impart knowledge in the basics of Agriculture
- To introduce the different crop production practices in wet land, dry land and garden land through hands on experience and demonstrations.
- To introduce the students about the regional and seasonal selection of crops
- To gain knowledge in crop water management
- To delineate the role of agricultural and irrigation engineers in relation to various crop production practices.

LIST OF EXPERIMENTS

1. Field preparation studies
2. Seed selection and seed treatment procedures
3. Seed bed and nursery preparation
4. Sowing / Transplanting
5. Biometric observation for crops
6. Nutrient management studies
7. Water management and irrigation scheduling
8. Weed management studies
9. Integrated Pest Management studies
10. Harvesting
11. Post harvesting

TOTAL: 60 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- acquire knowledge in factors affecting growth and production of crops
- analyse the regional and seasonal selection of crops
- understand the seed selection and seed treatment procedures
- know the water management and irrigation scheduling
- integrated pest management

COURSE OBJECTIVES

- To develop the reading skills of the students and make them familiarize in skimming and scanning.
- To instill the communication concepts to enhance the students' conversational skills through various practice sessions and to familiarize them with a variety of business correspondence.
- To inculcate the receptive skills i.e. Listening and Reading and to make the students well versed in the Productive skills and to assist them in improving their vocabulary and comprehension of grammar.

UNIT I READING AND VOCABULARY

Understanding short, real notices, messages - detailed comprehension of factual material- skimming & scanning skills - interpreting visual information - reading for detailed factual information - reading for gist and specific information - reading for grammatical accuracy and understanding of text structure - reading and information transfer.

UNIT II WRITING

Re-arranging appointments - asking for permission - giving instructions - apologizing and offering compensation - making or altering reservations - dealing with requests - giving information about a product.

UNIT III LISTENING

Listening to short telephonic conversation - Listening to short conversation or monologue - Listening to specific information - Listening to conversation- interview, discussion.

UNIT IV SPEAKING

Conversation between the interlocutor and the candidate - general interaction and social language - A mini presentation by each candidate on a business theme - organising a larger unit of discourse - giving information and expressing opinions - two way conversation between candidates followed by further prompting from the interlocutor- Expressing opinions- agreeing and disagreeing

TOTAL: 30 PERIODS

COURSE OUTCOMES

Upon the completion of the course, students will be able to

- enrich the vocabulary through reading and to develop their pronunciation skills.
- speak effectively in English in all occasions.
- prepare flawless reports and proposals.

TEXT BOOKS

1. Cambridge BEC Preliminary, Self-Study Edition, Cambridge University Press, New York, 2012.

COURSE OBJECTIVES

- To understand the basic laws of thermodynamics and heat transfer.
- To study the principle of operation of thermal equipments
- To impart knowledge in the properties of mixture of gases
- To introduce modes of heat transfer
- To furnish ideas related to the applications of laws of thermodynamics

UNIT I BASIC CONCEPTS OF THERMODYNAMICS 15

Thermodynamics and Energy – Systems – Types and properties - State and Equilibrium - Processes and Cycles – Forms of Energy – Temperature and Zeroth law of Thermodynamics – Pure substances – Phase change processes of pure substances – Property diagrams – Internal energy – Enthalpy – Energy transfer by Heat, Work and Mass – Applications.

UNIT II FIRST AND SECOND LAW OF THERMODYNAMICS 15

First law of thermodynamics – Energy balance for closed systems and steady flow systems – Applications of First law of Thermodynamics – Energy balance for Unsteady flow processes – Second law of Thermodynamics – Entropy – Carnot principles – Change in Entropy – Entropy and irreversibility - Applications.

UNIT III HEAT ENGINES 15

Internal Combustion Engines – C.I and S.I Engines – Four Stroke and Two Stroke Engines – Gas Turbines - Boilers – Fire Tube Boiler & Water Tube Boilers , Boiler Accessories and Components. Turbines – Impulse Turbine and Reaction Turbine , Turbine Components - Refrigeration Cycle – Vapour Compression & Vapour Absorption System ,Gas Refrigeration System – Environmental friendly Refrigerants – Air Conditioning.

UNIT IV GASES AND VAPOUR MIXTURES 15

Ideal and Real gases – Vander waals equations – Reduced property – Compressibility chart - Properties of mixture of gases – Dalton's law and Gibbs – Dalton law – Internal energy, Enthalpy and specific heats of gas mixtures.

UNIT V HEAT TRANSFER 15

Conduction – Plane Wall, Cylinder system, Composite Walls – Critical insulation thickness – Simple, fins convection – Free convection and forced convection – Flow over Flat plates and Flow through Pipes – Radiation – Black Body, Grey Body Radiation.

TOTAL: 75 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- gain knowledge in different gas power cycles
- use gas power cycles in IC and R&AC applications.
- understand the concepts of internal Combustion Engines
- know the properties of gases and vapour mixtures
- differentiate three modes of heat transfer

TEXTBOOKS

1. Yunus A. Cengel and Michael A.Boles, “Thermodynamics: An Engineering Approach”, Fourth Edition, Tata McGraw-hill, 2004.

3. Domkundwar.S., C.P.Kothandaraman “A Course in Thermal Engineering”, Fifth Edition, Dhanpat Rai & Co (p) Ltd, 2000.

COURSE OBJECTIVES

- To study the basic theory and practice for various areas of Agricultural Engineering, application of engineering to the problems of agricultural production.
- To impart knowledge in farm structures
- To introduce students the harvesting and mowing equipments
- To give outline in the cold storage and packaging of agricultural produce
- To define the concepts of energy requirement in agricultural operations

UNIT I INTRODUCTION, SOIL & WATER CONSERVATION AND IRRIGATION ENGINEERING 10

Agricultural Engineering – Introduction – Branches - Importance in national and global scenario – Institutes & organizations – Soil & water - Land development, Soil irrigability classification – Soil erosion and control, Soil conservation methods, Watershed management - Agro meteorology – Soil Water Plant relationship – Sources of water – Tanks – Wells & Reservoirs – Canal Network – Irrigation Scheduling – Irrigation methods – Micro irrigation - Participatory management of Irrigation Systems..

UNIT II FARM STRUCTURES 8

Farm stead, Farm Roads, Cattle sheds, Stanchion barn, Poultry shed, Hog housing, Machinery and implement shed, Storage structures for food grain, feed & forage - Structures for Plant environment - Green houses, Poly houses – Shade net.

UNIT III FARM MACHINERY AND EQUIPMENT 8

Tractor and Power Tiller – Tillage equipment – Sowing, Planting, Fertilizer application, Fertigation equipment - Spraying, Weeding and interculture – Harvesting and Mowing Equipment, Pumps.

UNIT IV AGRICULTURAL PROCESS ENGINEERING 10

Post harvest of crops, Unit operations in agricultural processing, Ripening chamber and Cold Storage - Packing of agricultural produces – Material handling equipments – Milk processing and dairy products.

UNIT V AGRO ENERGY 9

Energy requirement in agricultural operations - Solar (Thermal and Photovoltaic), Wind mills, Biogas energy and their utilization in agriculture – Gasification of biomass for IC Engines – Energy efficient cooking stoves and alternative cooking fuels – agricultural waste and their utilization.

TOTAL: 45 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- acquire knowledge in soil water conservation, irrigation engineering and farm structures

- utilize the agricultural waste effectively
- understand the post harvest technology of agricultural crops
- know the energy efficient cooking stoves and alternative cooking fuels
- understand the milk processing and dairy products

TEXTBOOKS

1. Michael, A.M. & Ojha, T.P. “Principles of Agricultural Engineering Vol. I & II”, Seventh Edition, Jain Brothers, New Delhi, 2011.
2. Jagdishwar Sahay. “Elements of Agricultural Engineering”, Standard Publishers Distributors, 2010.
3. Harry L. Field, John B. Solie, Introduction to Agricultural Engineering Technology – A problem solving approach, Springer Science, NY, USA, 2007.

COURSE OBJECTIVES

- To present the concepts of erosion so that students get a sound knowledge in the problems associated with it.
- To introduce the Classification of eroded soils and Runoff computation for soil conservation
- To impart knowledge in various practices to control erosion
- To study the water harvesting principles and techniques
- To enable the students to make use of the principles and concepts to solve issues related to soil and water management.

UNIT I SOIL EROSION PRINCIPLES 9

Approaches to soil conservation – Soil conservation in India - Erosion – Agents - Causes - Mechanics of water erosion – Soil erosion problems - Types of water erosion: Raindrop erosion, Sheet erosion, Rill erosion, Gully erosion, Stream bank erosion – Classification of Gully – Gully Control Structures: Drop Spillway, Drop Inlet, Chute Spillways - Prerequisites for soil and water conservation measures.

UNIT II ESTIMATION OF SOIL EROSION 9

Runoff computation for soil conservation: SCS-CN method – Evolution of Universal Soil Loss Equation: Applications and Limitations – Modified Universal Soil Loss Equation – Revised Universal Soil Loss Equation-2 - Permissible erosion – Land use capability classification - Classification of eroded soils.

UNIT III EROSION CONTROL MEASURES 10

Agronomic practices: contour cultivation - strip cropping – tillage practices – Soil management practices – Bunding: Types and design specifications - Mechanical measures for hill slopes – Terracing: Classification and design specification of bench terrace – Grassed waterways: Location, construction and maintenance – Types of temporary and permanent gully control structures.

UNIT IV WATER CONSERVATION MEASURES 9

In-situ soil moisture conservation – Water harvesting principles and techniques: Micro catchments, catchment yield using morphometric analysis - Farm ponds: Components, Design, Construction and Protection – Check dams - Earthen dam – Retaining wall.

UNIT V SEDIMENTATION 8

Sediment: Sources – Types of sediment load – Mechanics of sediment transport – Estimation of bed load – Sediment Graph - Reservoir sedimentation: Basics - Factors affecting sediment distribution pattern, Rates of reservoir sedimentation - Silt Detention Tanks.

TOTAL: 45 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- gain knowledge in the concepts of erosion and sedimentation.
- design specification of terracing
- implement water harvesting principles and techniques
- know the construction and protection of dams
- understand the factors affecting sediment distribution pattern.

TEXTBOOKS

1. Suresh, R., "Soil and Water Conservation Engineering", Standard Publication, New Delhi, 2007.
2. Ghanshyam Das, "Hydrology and Soil Conservation Engineering", Prentice Hall of India Private Limited, New Delhi, 2000.
3. "Sedimentation Engineering", 2006, ASCE manual and Report on Engineering Practice No. 54, Edited by Vito A. Vanoni. ASCE publishing.

REFERENCES

2. Gurmail Singh, "A Manual on Soil and Water Conservation", ICAR Publication, New Delhi, 1982.
3. Mal, B.C., "Introduction to Soil and Water Conservation Engineering", Kalyani Publishers, New Delhi, 2002

COURSE OBJECTIVES

- To introduce the student the concept of hydrological aspects of water availability and requirements
- To give idea in the factors affecting runoff
- To study the properties of aquifers
- To impart knowledge to quantify, control and regulate the water resources
- To develop skill to conduct Spatial analysis of rainfall data and design of water storage reservoirs

UNIT I PRECIPITATION AND ABSTRACTIONS 10

Hydrological cycle- Meteorological measurements – Requirements, types and forms of precipitation - Rain gauges-Spatial analysis of rainfall data using Thiessen and Isohyetal methods- Interception - Evaporation. Horton’s equation, pan evaporation measurements and evaporation suppression - Infiltration-Horton’s equation - double ring infiltrometer, infiltration indices.

UNIT II RUNOFF 8

Watershed, catchment and basin - Catchment characteristics - factors affecting runoff - Run off estimation using empirical - Strange’s table and SCS methods – Stage discharge relationships- flow measurements- Hydrograph – Unit Hydrograph – IUH

UNIT III FLOOD AND DROUGHT 9

Natural Disasters-Flood Estimation- Frequency analysis- Flood control- Definitions of droughts- Meteorological, hydrological and agricultural droughts- IMD method-NDVI analysis- Drought Prone Area Programme (DPAP)

UNIT IV RESERVOIRS 8

Classification of reservoirs, General principles of design, site selection, spillways, elevation – area - capacity - storage estimation, sedimentation - life of reservoirs – rule curve

UNIT V GROUNDWATER AND MANAGEMENT 10

Origin- Classification and types - properties of aquifers- governing equations – steady and unsteady flow - artificial recharge - RWH in rural and urban areas

TOTAL: 45 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- understand the key drivers on water resources, hydrological processes and their integrated behaviour in catchments
- gain knowledge in properties of aquifers

- to construct and apply a range of hydrological models to surface water and groundwater problems including Hydrograph, Flood/Drought management, artificial recharge
- to conduct Spatial analysis of rainfall data
- to design water storage reservoirs

TEXTBOOKS

1. Subramanya .K. "Engineering Hydrology"- Tata McGraw Hill, 2010
2. Jayarami Reddy .P. "Hydrology", Tata McGraw Hill, 2008.
3. Linsley, R.K. and Franzini, J.B. "Water Resources Engineering", McGraw Hill International Book Company, 1995.

3. Raghunath .H.M., "Hydrology", Wiley Eastern Ltd., 1998.

COURSE OBJECTIVES

- To conceive and design various farm structures related to agricultural engineering.
- To plan and to draw layout for farm structures
- To enhance the knowledge to design fencing system

LIST OF EXERCISES

1. Planning and Layout of farmstead
2. Design of stall bam
3. Design of loose housing and milk parlors
4. Design of poultry house
5. Design of a sheep / goat house
6. Design of ventilation system for dairy and poultry house
7. Design of silos – over ground and underground and hay storages
8. Design of farm fencing system
9. Design of farm trusses
10. Design of machinery and equipment shed and workshops
11. Design of septic tank and sanitary structures
12. Design of rural/farm roads and culverts.
13. Design of biogas plant

TOTAL: 60 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- design various form structures related to agricultural engineering
- plan and layout of farmstead
- design machinery and equipment shed and workshops
- design biogas plant
- design silos – over ground and underground and hay storages

TEXTBOOKS

1. Barre, H.J. and Sammet, L.L. "Farm Structures". John Wiley and Sons Inc. 1950."
2. Neubaur, L. W. and Walker, H.B. "Farm Buildings Design". Prentice Hall Inc., 1961.
3. Khanna, S.K. and Justo, C.E.G. "Highway Engineering". Nemchand and Bros., Roorkee, India.
4. Dutta, B.N. "Estimating and Costing in Civil Engineering Theory and Practice". S. Dutta and Co.
5. Bazirani, V.N. and Ratwani, M.M. "Steel Structures". Khanna Publishers, Delhi, 1981.
6. Justo, C.E.G. and Khanna, S.K. "Highway Engineering". Nemchand and Bros., Roorkee, India (Revised).

COURSE OBJECTIVES

- To practice various aspects of agricultural engineering by performing basic experiments in lab.
- To identify food crops
- To Estimate biometric parameters of different food crops
- To measure soil and water parameters
- To demonstrate Agro-energy equipment

AGROMETEOROLOGY**12**

1. Meteorology – Precipitation – Rain gauges - recording and non-recording rain gauges - Automatic Weather Station (AWS)
2. Measurement of evaporation using evaporimeter
3. Measurement of humidity, sunshine, solar radiation, wind direction and speed

SEEDS AND CROPS**12**

1. Identification of food grains and crops
2. Estimation of germination rate for cereals, pulses and oilseeds by conventional method and using Seed Growth germinator
3. Estimation of biometric parameters of different food crops

SOIL AND WATER PARAMETERS**9**

1. Soil Moisture estimation by different methods
2. pH and EC measurement using electrode device

AGRICULTURAL MACHINERY**12**

1. Demonstration of Agricultural machineries and equipment
2. Demonstration of Agricultural processing equipment
3. Demonstration of Agro-energy equipment

TOTAL: 60 PERIODS**COURSE OUTCOMES**

At the end of this course the student will be able to

- know various aspects of agricultural engineering
- identify food crops
- Estimate biometric parameters of different food crops
- measure soil and water parameters
- demonstrate Agro-energy equipment

REFERENCES

1. Michael, A.M. & Ojha, T.P. Principles of Agricultural Engineering Vol. I & II, Seventh Edition, Jain Brothers, New Delhi, 2011.
2. Harry L. Field, John B. Solie, Introduction to Agricultural Engineering Technology – A problem solving approach, Springer Science, NY, USA, 2007.

COURSE OBJECTIVES

- To verify the various principles by performing the experiments in lab.
- To expose the testing of different materials under the action of various forces and determination of their characteristics experimentally.

LIST OF EXPERIMENTS - FLUID MECHANICS

1. Flow Measurement

Calibration of Rotometer.

1. Flow through Venturimeter.
2. Flow through a circular Orifice.
3. Determination of mean velocity by Pitot tube.
4. Verification of Bernoulli's Theorem.
5. Flow through a Triangular Notch.
6. Flow through a Rectangular Notch.

2. Losses in Pipes

3. Determination of friction coefficient in pipes.
1. Determination of losses due to bends, fittings and elbows.

3. Pumps

1. Characteristics of Centrifugal pump.
2. Characteristics of Submersible pump.
3. Characteristics of Reciprocating pump.
4. Characteristics of Jet pump.

LIST OF EXPERIMENTS - STRENGTH OF MATERIALS

1. Tension test on mild steel rod.
2. Compression test on wood.
3. Double shear test on metal.
4. Torsion test on mild steel rod.
5. Impact test on metal specimen (Izod and Charpy).
6. Hardness test on metals (Rockwell and Brinell Hardness Tests).
7. Deflection test on metal beam.
8. Compression test on helical spring.
9. Deflection test on carriage spring.
10. Test on Cement.

TOTAL: 60 PERIODS

COURSE OUTCOMES

At the end of this course the student will be able to

- measure flow in pipes and determine frictional losses.
- develop characteristics of pumps and turbines.
- acquire knowledge in the area of testing of materials and components of structural elements experimentally.
