

PAAVAI ENGINEERING COLLEGE, NAMAKKAL – 637 018

(AUTONOMOUS)

B.E. AERONAUTICAL ENGINEERING

REGULATION 2016

CURRICULUM

(CHOICE BASED CREDIT SYSTEM)

(For the candidates admitted during the Academic Year 2017 - 2018)

SEMESTER I

S.No	Category	Course Code	Course Title	L	T	P	C
Theory							
1	BS	MA16101	Matrices and Calculus	3	2	0	4
2	HS	EN16101	Technical English I	3	0	0	3
3	BS	PH16101	Engineering Physics	3	0	0	3
4	BS	CH16101	Engineering Chemistry I	3	0	0	3
5	ES	ME16104	Engineering Graphics	3	2	0	4
6	ES	EE16101	Basic Electrical and Electronics Engineering	3	0	0	3
Practical							
7	BS	PC16101	Physics and Chemistry Laboratory I	0	0	2	1
8	HS	EN16102	English Communication Skills Laboratory	0	0	2	1
9	PC	AE16101	Basic Aeromodeling Laboratory	0	0	2	1
TOTAL				18	4	6	23

SEMESTER II

S.No	Category	Course Code	Course Title	L	T	P	C
Theory							
1	BS	MA16201	Differential Equations and Complex Analysis	3	2	0	4
2	HS	EN16201	Technical English II	3	0	0	3
3	BS	PH16202	Applied Physics	3	0	0	3
4	BS	CH16201	Engineering Chemistry II	3	0	0	3
5	ES	CS16201	Computer Programming	3	0	0	3
6	ES	ME16201	Engineering Mechanics	3	2	0	4
Practical							
7	BS	PC16201	Physics and Chemistry Laboratory II	0	0	2	1
8	ES	GE16201	Engineering Practices Laboratory	0	0	4	2
9	ES	CS16202	Computer Programming Laboratory	0	0	2	1
TOTAL				18	4	8	24

COURSE OUTCOMES

At the end of this course, the students will be able to

- identify the solutions of the characteristic equations and to understand the technique of diagonalizing a matrix which would render the eigen solution procedure very simple.
- understand the geometrical aspects of curvature, involutes and evolutes of plane curves, essential concepts for an engineer, as elegant applications of differential calculus.
- know the functions of more than one variable, from the points of view of their differentiation, expansions and extreme values, along with differentiation under integral sign which are encountered in engineering studies.
- apply the methods of single, double and triple integration, which are needed in their studies in other areas and gained confidence to handle integrals of higher orders.

3. <http://nptel.ac.in/courses/122104017/28>

COURSE OBJECTIVES

- To help students of engineering and technology to develop a strong base in the use of English.
- To develop their basic speaking and writing skills in order for them to deliver impromptu talks, participate with confidence in conversations and write/ draft effective essays and emails.
- To improve the reading skills of engineering and technology students so as to enable them communicate with confidence in English.

UNIT I VOCABULARY AND GRAMMAR 9

General Vocabulary - Prefixes & Suffixes - Words used as nouns and verbs - Adjectives - Comparative adjectives - Phrasal verbs- Acronyms - Abbreviations -Tenses - Active and Passive voice - Modal verbs and Probability - Cause and Effect expressions - subject-verb agreement - yes or no questions - gerund and infinitives - imperative sentences - Prepositions.

UNIT II LISTENING 9

Listening and transferring of information, listening to dialogues, listening to informal conversation- listening to short talks and answering questions- understanding the structure of conversations- telephone etiquette.

UNIT III READING 9

Reading – Sub-Skills of reading-skimming-scanning-predicting-Reading comprehension (multiple choice and open-ended questions) with multiple choice questions-developing hints-reading short passages in English and answering multiple choice questions– interpreting visual information - Flow Chart, Pie Chart, Graph, Bar Chart (Transcoding).

UNIT IV WRITING 9

Writing- single sentence definitions- Informal letters/ emails– giving instructions, recommendations– note making-Minutes of Meeting - writing memos -use of cohesive devices and reference words- writing essays-points to remember-types of essay- issue-based, compare and contrast.

UNIT V SPEAKING 9

Introducing oneself – (personal information name, background, study details, areas of interest- speaking about one's hobbies, strengths and weaknesses, role model and future ambition)–Role Plays- Giving 5-7 minutes impromptu talks.

TOTAL: 45 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- use suitable vocabulary with confidence and express their ideas both in speech and writing.

- listen and comprehend classroom lectures, short talks and conversations.
- read, interpret and analyze a given text and effectively, and use cohesive devices in spoken and written English.

TEXT BOOK

1. Mahalakshmi.S.N. English and Workbook for Engineers. V.K. Publications, Sivakasi. 2015.

3. www.onestopenglish.com

COURSE OBJECTIVES

- To understand the basic concepts in properties of matter.
- To acquire the knowledge in the areas of acoustics, ultrasonics and applications.
- To describe the dual nature of matter, x-ray scattering and applications of Schrodinger wave equation.
- To categorize the basics knowledge in interference, laser and fibre optics.
- To identify the different crystal structures and crystal growth techniques.

UNIT I PROPERTIES OF MATTER**9**

Introduction- Elasticity–Hooke's law – relationship between three module of elasticity (qualitative) – stress –strain diagram – Poisson's ratio –factors affecting elasticity. Bending moment – Young's modulus: theory and experiment (uniform and non-uniform bending) – I-shaped girders – twisting couple of a wire or cylinder -torsion pendulum –determination of rigidity modulus.

UNIT II ACOUSTICS AND ULTRASONICS**9****Acoustics:**

Introduction- classification of sound –characteristics of musical sound– decibel –Weber- Fechner law - absorption co-efficient– reverberation – reverberation time – Sabine's formula: growth and decay of sound energy (qualitative) – factors affecting acoustics of buildings and their remedies.

Ultrasonics:

Introduction-properties-production: magnetostriction and piezoelectric methods–detection of ultrasonic waves Kundt's tube–determination of velocity of sound in liquid (acoustic grating). Application: SONAR. Non destructive testing – pulse echo system through transmission and reflection modes.

UNIT III MODERN PHYSICS**9**

Black body radiation – Planck's theory (derivation) – deduction of Wien's displacement law and Rayleigh Jean's law. X-ray scattering: Compton effect –derivation –experimental verification. Matter waves–de-Broglie wavelength– Schrodinger's time independent and time dependent equations - physical significance of the wave function. Applications: particle in one dimensional box-degenerate and non-degenerate states.

UNIT IV APPLIED OPTICS**9**

Interference: Michelson interferometer: construction and working. Applications: determination of wave length and thickness. Air wedge –theory and determination of thickness of a thin wire. (Qualitative treatment only)

Laser: properties–pumping methods -Einstein coefficients.Types:CO₂, Nd-YAG and semiconductor lasers (hetero junction) –uses.

Optical fiber: Principle and propagation of light through optical fiber– expressions for numerical aperture and acceptance angle–types of optical fibers– fiber optical communication system (block diagram) – endoscope – Fiber optic sensors: temperature and displacement sensors.

UNIT V CRYSTAL PHYSICS

9

Lattice – unit cell – Bravais lattices – lattice planes – Miller indices –derivation for inter-planar spacing in terms of Miller indices– calculation of number of atoms per unit cell , atomic radius , coordination number and packing factor for SC, BCC, FCC and HCP structures. X-ray diffraction: Bragg's law –diffraction methods – powder and Laue methods (Qualitative treatment only).Growth Techniques: Bridgman and Czochralski techniques.

TOTAL: 45 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- assess the elastic properties of the materials.
- relate the fundamental knowledge of acoustics which would facilitate in acoustical design of buildings and ultrasonics.
- know the development of modern physics and its applications.
- recognize the uses of laser and the propagation of light through fiber optics.
- distinguish the different crystal systems, structural determination and synthesis of crystals.

TEXT BOOKS

1. S.Vadivel and A.Pannerselvam, Engineering Physics, Jaitech Publications, 2015 (Revised edition).

2. <http://www.npatel.iitm.ac.in/courses/Webcourse-contents/IIT%20Guwahati/engg.physics/index-cont.html>
3. <http://de.physnet.net/PhysNet/education.html>

COURSE OBJECTIVES

- To recognize the need of polymers for industrial and household application.
- To evaluate the interrelation between heat and work within the confines of the laws of thermodynamics.
- To understand the concepts of instrumentation, data acquisition, data processing and the principles of analytical technique.
- To predict the number of phases that exists in equilibrium for a system.
- To acquaint the students with the basics of Nano materials, their properties and applications.

UNIT I POLYMERS**9**

Introduction: Classification of polymers – Natural and Synthetic- Functionality – Degree of polymerization: Types of polymerization and Mechanism of Addition (Free Radical, cationic and anionic); condensation and copolymerization. Effect of polymer structure and properties of polymers strength, plastic deformation, physical state and chemical resistance. Plastics-Thermoplastics and Thermosetting plastics -Preparation, properties and uses of Nylon 6:6, Teflon, epoxy resin and polycarbonate (Lexan)-Compounding of Plastics-Constituents and functions -Fabrication methods of Plastics.

UNIT II CHEMICAL THERMODYNAMICS**9**

Terminology of thermodynamics-First law- Second law: Entropy- Entropy change for an ideal gas, reversible and irreversible process; Entropy of Phase transition: Clausius inequality. Free energy and work function: Helmholtz and Gibbs free energy functions (problems); Criteria of spontaneity: Gibbs Helmholtz Equation (problems); ClausiusClapeyron equation ; Maxwell Relations- Vant Hoff Isotherm and Isochore (problems).

UNIT III WATER TECHNOLOGY AND SPECTROSCOPIC TECHNIQUES**9**

Water quality standards-Hardness of water-Types-expression-units-CaCO₃equivalence-problems and disadvantages- Water quality parameters and their determination methods-Titremetry,ElectroUV and AAS-Spectroscopy -Types- Electromagnetic spectrum – Absorption of radiation – Beer-Lambert's law – UV-Visible spectroscopy and IR spectroscopy – principles and instrumentation (block diagram only Electronic, Vibrational and rotational transitions. Estimation of iron by colorimetry – flame photometry principles and instrumentation (block diagram only) - estimation of sodium by flame photometry –

UNIT IV PHASE RULE AND ALLOYS**9**

Phase rule: Introduction, and explanation of terms with examples, One Component System: Water System- Reduced phase rule- Two Component Systems- Lead- Silver system, Zinc – Magnesium system. Alloys: Introduction – Definition – properties of Alloys- significance of alloying. Functions and effect of alloying elements- Ferrous alloys- Nichrome and Stainless Steel- Heat treatment of steel: Non Ferrous alloys; Brass and Bronze.

UNIT V NANOCHEMISTRY**9**

Basics-distinction between molecules, nanoparticles and bulk materials; size-dependent properties. Nanoscale materials- particles: cluster, rods, tubes (CNT) and wires. Synthesis: precipitation, thermolysis, hydrothermal, solvothermal, electrode deposition, chemical vapour deposition, laser ablation; Properties and applications in electronics and communication, Energy sciences and risk discussion and future perspectives.

TOTAL: 45 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- select a polymeric material for a specific engineering application.
- know the basic concepts of internal energy, enthalpy, entropy, free energy and chemical potential.
- gain practical experience in chemical process equipment as well as to analyze and interpret data.
- classify the states in a equilibrium in a heterogeneous system.
- identify the particle size, and the application of Nanomaterials in various fields .

TEXT BOOKS

1. M.Mohan and G.Raja, Engineering Chemistry - I, Jai Tech Publication, Chennai (2017).
2. P.C.Jain and Monica Jain, “Engineering Chemistry”, 15th ed., DhanpatRaiPub.Co, New Delhi, (2012).

REFERENCES

1. B. Sivasankar, “Engineering Chemistry”, Tata McGraw-Hill Pub. Co. Ltd., New Delhi (2008).
2. R.Sivakumar and N.Sivakuamr, “Engineering Chemistry”, Tata McGraw-Hill publishing company limited, New Delhi, (2009)

COURSE OBJECTIVES

- To enable the students with various concepts like dimensioning, conventions and standards related to engineering drawing
- To impart knowledge on the projection of points, lines and plane surfaces
- To improve the visualization skills for better understanding of projection of solids and section of solids
- To develop the imaginative skills of the students required to understand Developments of surfaces and isometric projection.
- To give practice on Computer aided Drafting

Concepts and Conventions (Not for Examination) 2

Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.

UNIT I PLANE CURVES AND FREE HAND SKETCHING 14**Curves Used In Engineering Practices:**

Conics – Construction of ellipse, Parabola and hyperbola by eccentricity method – Construction of cycloid, Epicycloids and Hypocycloid – construction of involutes of square and circle – Drawing of tangents and normal to the above curves. Construction of Spiral curve.

Free Hand Sketching:

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT II PROJECTION OF POINTS, LINES AND PLANE SURFACES 14

Orthographic projection- principles-Principal planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method and traces. Projection of planes inclined to both the principal planes by rotating object method.

UNIT III PROJECTION OF SOLIDS AND SECTIONS OF SOLIDS 15

Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes by rotating object method. Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section.

UNIT IV DEVELOPMENT OF SURFACES AND ISOMETRIC PROJECTIONS 15

Development of lateral surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones. Development of lateral surfaces of solids with cut-outs and holes. Principles of isometric projection – isometric scale –Isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones.

UNIT V INTRODUCTION TO CAD 15

Capabilities of software for Drafting and Modeling - Creation of simple figures like polygon and general multi-line figures - Isometric projection of simple objects - Development of prism, pyramid, cylinder, cone etc.,

TOTAL: 75 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- perform free hand sketching of basic geometrical constructions and multiple views of objects.
- draw the projections of points, straight lines and plane surfaces in given quadrant
- understand the projection of solids in various positions in first quadrant and section of solids
- draw the development of surfaces and isometric projection.
- draft simple drawings with the help of drafting software.

PUBLICATION OF BUREAU OF INDIAN STANDARDS

1. IS 10711 – 2001: Technical products Documentation – Size and lay out of drawing sheets.
2. IS 9609 (Parts 0 & 1) – 2001: Technical products Documentation – Lettering.
3. IS 11669 – 1986 & SP 46 – 2003: Dimensioning of Technical Drawings.
4. IS 15021 (Parts 1 to 4) – 2001: Technical drawings – Projection Methods.

(COMMON TO AERO/AGRI/MCT/IT)

COURSE OBJECTIVES

- To analyze the various AC and DC circuits and find the circuit parameters.
- To introduce the principles of AC and DC fundamentals.
- To familiarize the relationship between Electric and Magnetic circuits.
- To study the basics of electronic devices and its applications.
- To learn various number systems and to realize the logic functions by using various gates.

UNIT I ELECTRICITY AND MAGNETISM 9

Coulomb's law, Flemings law, lenz law–Properties of Magnets, Laws of Magnetism, flux, flux density, Field strength, Permeability, Reluctance, Permeance, Types of Magnetic circuits – Comparison of Magnetic and Electric Circuits. Self and Mutual Inductance – Self and mutually induced emf.

UNIT II DC AND AC CIRCUITS FUNDAMENTALS 9

DC: Ohm's Law- Limitations of Ohm's Law, Kirchhoff's' Laws, series– parallel resistive circuits, comparison of series and parallel circuits, Star - Delta Transformation – Problems.

AC Waveforms – RMS and Average value, Form Factor, Peak Factor. Single Phase AC Circuits – RL, RC, RLC series and parallel circuits– Impedance, Power, Power factor, Series and Parallel Resonance - Problems. Introduction to three phase AC circuits.

UNIT III MEASUREMENTS 9

Types of electrical measurement –construction and Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters. Types of errors.

UNIT IV SEMICONDUCTOR DEVICES 9

Characteristics of PN Junction Diode - Zener Effect - Zener Diode and its Characteristics - Half wave and Full wave Rectifiers - Voltage Regulation. Bipolar Junction Transistor - CB, CE, CC Configurations and Characteristics - Elementary Treatment of Small Signal Amplifier.

UNIT V DIGITAL ELECTRONICS 9

Binary Number System - Logic Gates - Boolean Algebra - Half and Full Adders - Flip-Flops - Registers and Counters - A/D and D/A Conversion.

TOTAL: 45 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- get the basic knowledge about the AC and DC Electric circuits.
- understand the basic quantities in measurements

- apply concepts and theories of electrostatics
- understand the concept of Semiconductor Devices and Applications
- acquire the knowledge of various types of digital electronics technique.

(COMMON TO ALL BRANCHES)

PHYSICS LABORATORY I**COURSE OBJECTIVES**

- To demonstrate various experiments, to understand the basic concepts in the properties of matter, sound, light, thermal physics and electricity.

LIST OF EXPERIMENTS

1. Determination of wavelength and particle size using Laser.
2. Determination of acceptance angle in an optical fiber.
3. Determination of velocity of sound and compressibility of liquid – Ultrasonic interferometer.
4. Determination of wavelength of mercury spectrum – spectrometer grating.
5. Determination of thermal conductivity of a bad conductor – Lee's Disc method.
6. Determination of Young's modulus by non-uniform bending method.

COURSE OUTCOMES

At the end of this course, the students will be able to apply the principles of mechanical, electrical, thermal and optical characteristics of materials.

CHEMISTRY LABORATORY I**COURSE OBJECTIVES**

- To analyze the hardness of water, impurities in water, water quality parameters and nature of chemicals in neutral medium.

LIST OF EXPERIMENTS

1. Determination of DO content of water sample by winkler's method.
2. Determination of chloride content of water sample by Argentometric method.
3. Determination of strength of given hydrochloric acid using pH meter.
4. Determination of strength of acids in a mixture using conductivity meter.
5. Conductometric titration of strong acid Vs Strong base.

TOTAL: 30 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to know the quality of water and chemical process taking place in different medium

COURSE OBJECTIVES

- To instil the basic communication concepts to enhance students' communication skills through various lab sessions.
- To help students develop the ability to communicate effectively in spoken English and develop their soft skills and interpersonal skills.
- To increase employability by developing students' communication skills in English.

UNIT I FORMAL AND INFORMAL CONVERSATION PRACTICE 6

Role Play conversations - with family members, neighbours, friends, relatives etc. Simple expressions - agreeing / disagreeing, persuading, wishing, consoling, advising, arguing, expressing opinions etc.- Professional dialogues with superiors - Conversation with different professionals in government and corporate Offices, Official Meetings, educational Institutions, (At the railway junction, malls, post office, bank) etc- every day usage of English

UNIT II ORAL REVIEW, RADIO SHOW AND NARRATIVE TECHNIQUES 6

Oral review of books - Presentation of various radio programs like news, announcements, advertisements, entertainment programs etc. as a team activity. Understanding the basic narrative techniques - Narrating short stories. Narrating real life experiences, Oral interpretation of charts, tables, graphs.

UNIT III RESUME / LETTER WRITING 6

Preparation of resume - structure – Types of resume – writing the vision statement – Objectives – Types of Letter – Job Application – accepting / declining a Job offer.

UNIT IV PRESENTATION SKILLS & GROUP DISCUSSION 6

Elements of effective presentation – Structure of a presentation – Speech acts - effective use to presentation tools - Audience analysis – Preparing the PPT slides - Video samples- Importance of GD – in the selection process - Structure of a GD – Moderator – led and other GDs - Strategies in GD – Team work - Body Language - Mock GD -Video samples

UNIT V INTERVIEW SKILLS 6

Kinds of interviews – one to one, group interview, telephone interview, online interview, stress interview - Required Skills – Corporate culture – Mock interviews-Video samples.

TOTAL: 30 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- speak effectively and confidently in English.

- attend job interviews with confidence.
- write effective job applications with resume.

TEXT BOOK

COURSE OBJECTIVES

- To enhance practical knowledge in art of designing, building and operating miniaturized aircrafts (powered or non-powered).

LIST OF MODELING

1. Study about historical background of aircrafts
2. Study of Components of aircrafts and its functions
3. Construction of glider models using different materials
4. Construction of wings
5. Construction of Fuselage
6. Construction of tail plane
7. Assembly of the aircraft models
8. Construction of aircraft
9. Calculation of Endurance, Range, time and CG

TOTAL: 30 PERIODS**COURSE OUT COMES**

At the end of this course, students will be able to design and operate the miniaturized aircrafts.

SEMESTER II

MA16201 DIFFERENTIAL EQUATIONS AND COMPLEX ANALYSIS 3 2 0 4
(COMMON TO ALL BRANCHES)

COURSE OBJECTIVES

- To discuss a wide range of basic mathematical methods for solving different types of problems arising in the fields of Science, Mathematics and Engineering.
- To acquire sound knowledge of in solving ordinary differential equations that model engineering problems.
- To understand the concepts of vector calculus, which is applied in all engineering disciplines.
- To know the standard techniques of complex variable
- To learn the purpose of using transforms and to create a new domain

UNIT I ORDINARY DIFFERENTIAL EQUATIONS 15

Higher order linear differential equations with constant coefficients – Method of variation of parameters – Cauchy's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients.

UNIT II VECTOR CALCULUS 15

Gradient, Divergence and Curl – Directional derivative – Irrotational and solenoidal vector fields – vector integration – verifications of Green's, Gauss divergence and Stokes' theorem – simple applications.

UNIT III ANALYTIC FUNCTIONS 15

Functions of a complex variable – Analytic functions –, Cauchy – Riemann equations (excluding proofs) – Harmonic and orthogonal properties of analytic function – Harmonic conjugate – Construction of analytic functions – Conformal mapping : $w = z+c$, cz , $1/z$, and bilinear transformation.

UNIT IV COMPLEX INTEGRATION 15

Complex integration – Statement and applications of Cauchy's integral theorem and Cauchy's integral formula – Taylor and Laurent expansions – Singular points – Residues – Residue theorem – Contour integration.

UNIT V LAPLACE TRANSFORM 15

Laplace transform – Transform of elementary functions – Basic properties – Definition of Inverse Laplace transforms – Convolution theorem (excluding proof) – Initial and Final value theorems – Solution of linear ODE of second order with constant coefficients using Laplace transformation techniques.

TOTAL: 75 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- solve differential equations.
- study the basics of vector calculus comprising of gradient, divergence and curl and line, surface and volume integrals and the classical theorems.
- know the concepts of analytic functions and its properties and apply it in conformal mapping.
- gain knowledge in the basics of complex integration and the concept of contour integration which is an important tool for evaluation of certain integrals encountered in practice.
- solve Laplace transform and its properties and give sufficient exposure to the solution of certain linear differential equations.

WEB LINKS

1. <http://tutorial.math.lamar.edu/Classes/DE/DE.aspx>
2. <https://rutherglen.science.mq.edu.au/wchen/lnicafolder/lnica.html>
3. <http://www.nptel.ac.in/courses/111103070/>

COURSE OBJECTIVES

- To help students of engineering and technology to enhance their ability to listen, read, write and speak English.
- To comprehend and write essays and prepare short project reports related to their branches of specialization.
- To enhance their ability to read and comprehend technical texts and to make effective presentations on topics in engineering and technology.

UNIT I VOCABULARY AND GRAMMAR 9

General Vocabulary- prefixes & suffixes – collocations - fixed expressions (adhere to, on the part of etc.)- Idioms and phrases - compound nouns -numerical expression – -Articles –direct into indirect speech – use of discourse markers- if conditionals- purpose and its functions – editing-wh Questions – One word Substitution

UNIT II LISTENING 9

Listening to news and announcements, listening to a telephone conversation- Listening to model interviews –/ Ink/TED Talks- Interview Techniques

UNIT III READING 9

Reading - Developing analytical skills, Deductive and inductive reasoning - Extensive reading- Reading articles in newspapers, journals, manuals- critical reading.

UNIT IV WRITING 9

Writing- Extended Definitions – Checklist, Dialogue writing - Formal letters- complaint letters, invitation letters- requisition letters – writing a job application- Resume(Letter and Email format) - Technical Report Writing – (Feasibility Reports, Survey Report) – Essay writing- Argumentative essay

UNIT V SPEAKING 9

Syllable - Stress- Intonation- Silent Letters - Presentations on a given topic - Mini presentation in small groups – group discussions- mock interviews.

TOTAL: 45 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- speak with clarity and confidence.
- write comprehensive correct reports, job applications and draft effective e-mails.

- make effective presentations using power point and participate successfully in group discussions.

TEXT BOOK

1. Mahalakshmi.S.N. English Workbook for Engineers, V.K. Publications, Sivakasi. 2015.

COURSE OBJECTIVES

- To develop knowledge about the conduction properties of metals.
- To correlate better understanding on carrier concentration and its variation with temperature in different types of semiconductors.
- To compute the different kinds of polarization mechanisms and applications of dielectric materials.
- To recognize the different types of magnetic materials and its uses.
- To describe the various material characterization techniques.

UNIT I CONDUCTING MATERIALS 9

Introduction: types of conducting materials- classical free electron theory: postulates- derivation of electrical conductivity. Thermal conductivity- derivation. Wiedemann-Franz law and its verifications- Lorentz number—merits and demerits of classical free electron theory. Quantum free electron theory: Fermi-Dirac distribution function and its variation with temperature – density of energy states –carrier concentration in metals- average energy of electrons at 0K.

UNIT II SEMICONDUCTING MATERIALS 9

Introduction: direct and indirect band gap semiconductors- origin of band gap in solids (qualitative treatment only) - concept of effective mass of an electron and hole. Intrinsic semiconductor: expressions for density of electrons, holes, carrier concentration, Fermi level, electrical conductivity and band gap.

Extrinsic semiconductors: derivations for charge carrier in n-type and p-type semiconductors – variation of Fermi level with temperature and impurity concentration. Hall effect—theory and experimental determination of Hall coefficient – Applications.

UNIT III DIELECTRIC MATERIALS 9

Introduction: fundamental definitions in dielectrics—expressions for electronic and ionic polarization mechanisms- orientation polarization (qualitative) – space charge polarization – Langevin – Debye equation – frequency and temperature effects on polarization. Internal field – expression for internal field (cubic structure) –Clausius–Mosotti equation—significance—dielectric loss –dielectric breakdown – various breakdown mechanisms with characteristics – applications of dielectric materials.

UNIT IV MAGNETIC MATERIALS 9

Introduction: basic definitions - origin of magnetic moment-Bohr magneton- magnetic materials: classification of dia, para, ferro magnetic materials. Ferro magnetic domains- energies involved in the growth of magnetic domains- hysteresis-explanation of hysteresis curve based on domain theory- soft and hard magnetic materials-ferrites - applications. Principle-Magneto resistance (MR) and giant

magneto resistance (GMR).

UNIT V MATERIALS CHARACTERIZATION

9

Introduction: Thermogravimetric analysis (TGA) – differential thermal analysis (DTA) – differential scanning calorimetry (DSC) – electron microscopy, scanning electron microscope (SEM) – transmission electron microscope (TEM) – atomic force microscope (AFM)–scanning tunneling microscope (STM) – Principle–electrostatic force mode (EFM) and magnetic force mode (MFM).

TOTAL: 45 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- select the metals required for specific applications in the area of engineering and technologies.
- distinguish between different types of semiconductor and determinations of hall co-efficient.
- classify different kinds of polarization mechanism and uses.
- identify different magnetic materials and giant magneto resistance.
- relate the different types of characterization techniques.

2. <http://www.careercornerstone.org/matscieng/matsciengfield.htm>

COURSE OBJECTIVES

- To gain hands an experience about cells and batteries
- To understand the mechanism of corrosion and its control methods.
- To emphasize the need of renewable energy sources.
- To familiar with the usage of chemistry which exhibit engineering materials.
- To apply the information of chemicals in designing the molecule.

UNIT I ELECTROCHEMISTRY 9

Electrochemical cells-types- reversible and irreversible cells – EMF –measurement of emf-Single electrode potential – Nernst Equation (derivation and problem) – reference electrodes – standard hydrogen electrode - calomel electrode – Ion selective electrode – glass electrode – measurement of pH – electrochemical series – significance -potentiometric titrations (redox – Fe^{2+} Vs dichromate).

UNIT II CORROSION AND CORROSION CONTROL 9

Corrosion-Causes-Types-Chemical corrosion - Pilling-Bedworth rule – electrochemical corrosion – mechanism - galvanic corrosion – differential aeration corrosion – factors influencing corrosion – corrosion control – sacrificial anode and impressed cathodic current methods – corrosion inhibitors – protective coatings – preliminary treatment –Metallic and Non metallic coatings-Varnish-Lacquer-Hot dipping-Metal Cladding-Electroplating(Au)-Galvanizing-Tinning-Electroless plating (Ni)– Paints – constituents and function .

UNIT III NONCONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES 9

Nuclear energy-fission and fusion reaction and light water nuclear reactor for power generation (block diagram only)-breeder reactor-solar energy conversion-solar cells-wind energy-Fuels cells-hydrogen-oxygen fuel cell-batteries-alkaline batteries-lead acid-nickel cadmium, lithium batteries and Nano batteries.

UNIT IV ENGINEERING MATERIALS 9

Refractories – classification – acidic, basic and neutral refractories – properties (refractoriness, refractoriness under load, dimensional stability, porosity, thermal spalling) – manufacture of alumina, magnesite and zirconia bricks. Lubricants – mechanism of lubrication, liquid lubricants, - properties – viscosity index, flash and fire points, cloud and pour points, oiliness-Aniline point) – solid lubricants – graphite and molybdenum sulphide.

UNIT V CHEMINFORMATICS 9

Definition – coordinate –bonds –bond length – bond angles – torsional angles – chemical structure – definition - conformation – representation of structural information – linear format – SMILEYF notation – MOL format – PDB format – storage of structural data in a database - structural keys –

finger print -canonical structure – similarity search –sub structure search - application of chem-informatics in drugs designing.

TOTAL: 45 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- understand the application of cells and batteries in practical field.
- know the rate of corrosion of a metal in a given environment and identify appropriate control techniques to avoid corrosion.
- recognize the energy devices produce sustainable energy.
- select the appropriate lubricant for different engineering applications.
- understand the basics concept of drug designing by chem-informatics.

3. www.chemwiki.ucdavis.edu

COURSE OBJECTIVES

- To learn the organization of a digital computer.
- To be exposed to the number systems.
- To think logically and write pseudo code or draw flow charts for problems.
- To be familiar with programming in C.
- To use arrays, strings, functions, pointers, structures and unions in C.

UNIT I INTRODUCTION TO COMPUTERS 9

Introduction – Characteristics of Computers – Evolution of Computers – Computer Generations – Classification of Computers – Basic Computer organization – Number Systems. Computer Software – Types of Software – Software Development Steps – Internet Evolution - Basic Internet Terminology – Getting connected to Internet Applications. Problem Solving Techniques- Planning the Computer Program – Purpose – Algorithm – Flow Charts – Pseudo code. Application Software Packages- Introduction to Office Packages (not detailed commands for examination).

UNIT II BASICS OF ‘C’ LANGUAGE 9

Overview of C – Constants, Variables and Data Types – Operators and Expressions – Managing Input and Output operators – Decision Making - Branching and Looping.

UNIT III ARRAYS AND STRINGS 9

Array Concepts- Two Dimensional Array - Passing Arrays to Functions - Multi Dimensional Array. String Operations - Sorting and Searching

UNIT IV FUNCTIONS AND POINTERS 9

Functions – Function Prototypes – Parameter Passing Methods – Recursion – Library Functions. Pointers – Pointers and Functions – Pointers and Strings – Operations on Pointers – Dynamic Memory Allocation

UNIT V STRUCTURE, UNIONS AND FILE HANDLING 9

Structures and Union – Declaring, Accessing, Initialization, Structure assignment, Nested Structure, Array of Structure. File Handling Functions

TOTAL: 45 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- gain knowledge about number systems.
- work in office package.
- understand basic concepts of C programs.

- obtain knowledge about user defined function and scope of variables in C.
- acquire knowledge for handling arrays, strings, functions, pointers, structures and unions in C.

4. E.Balagurusamy, “Computing fundamentals and C Programming”, TataMcGRaw-Hill Publishing Company Limited, (2011).
5. Dromey R.G., “How to Solve it by Computer”, Pearson Education, Fiveth Reprint, 2009.

(COMMON TO AERO / AGRI / CIVIL / MECH / MCT)

COURSE OBJECTIVES

- To solve basic concepts of engineering problems such as force, displacement, velocity and acceleration.
- To gain knowledge in the concepts involved in equilibrium of rigid bodies.
- To impart analytical skills to solve problems in moments of surfaces and solids
- To develop knowledge in the dynamics of particles due to force.
- To understand the rigid body problems subjected to friction and elements.

UNIT I BASICS AND STATICS OF PARTICLES 15

Introduction - Units and Dimensions - Laws of Mechanics - Lame's theorem, Parallelogram and triangular Law of forces - Vectors - Vectorial representation of forces and moments - Vector operations: additions, subtraction, dot product, cross product - Coplanar Forces - Resolution and Composition of forces - Equilibrium of a particle - Forces in space - Equilibrium of a particle in space - Equivalent systems of forces - Principle of transmissibility.

UNIT II EQUILIBRIUM OF RIGID BODIES 15

Free body diagram - Types of supports and their reactions - requirements of stable equilibrium Moments and Couples - Moment of a force about a point and about an axis - Vectorial representation of moments and couples - Scalar components of a moment - Varignon's theorem - Equilibrium of Rigid bodies in two dimensions - Equilibrium of Rigid bodies in three dimensions – Examples

UNIT III PROPERTIES OF SURFACES AND SOLIDS 15

Determination of Areas and Volumes - First moment of area and the Centroid of sections - Rectangle, circle, triangle from integration - T section, I section, - Angle section, Hollow section by using standard formula - second and product moments of plane area - Rectangle, triangle, circle from integration - T section, I section, Angle section, Hollow section by using standard formula - Parallel axis theorem and perpendicular axis theorem - Polar moment of inertia

UNIT IV DYNAMICS OF PARTICLES 15

Displacements, Velocity and acceleration, their relationship - Relative motion - Curvilinear motion - Newton's law - Work Energy Equation of particles - Impulse and Momentum - Impact of elastic bodies.

UNIT V FRICTION AND ELEMENTS OF RIGID BODY DYNAMICS 15

Frictional force - Laws of Coloumb friction - simple contact friction - Rolling resistance - Belt friction. Translation and Rotation of Rigid Bodies - Velocity and acceleration - General Plane motion.

TOTAL: 75 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- apply the differential principles to solve engineering problems.
- gain in-depth knowledge in the equilibrium of rigid bodies.
- identify and calculate the various properties of surfaces and solids
- categorize the various forces analysis in structures.
- solve rigid body problems subjected to dynamic forces.

3. <http://www.myopencourses.com/subject/engineering-mechanics-2>

(COMMON TO ALL BRANCHES)

PHYSICS LABORATORY II**COURSE OBJECTIVES**

- To assess various experiments to enhance the basic concepts of Physics in the properties of matter, optics and semiconductor.

LIST OF EXPERIMENTS

1. Determination of Young's modulus by uniform bending method.
2. Determination of band gap of a semiconductor.
3. Determination of coefficient of viscosity of a liquid –Poiseuille's method.
4. Determination of thickness of a thin wire – Air wedge method.
5. Determination of rigidity modulus – Torsion pendulum.

COURSE OUTCOMES

At the end of this course, the students will be able to apply the principles of mechanical, electrical, and optical characteristics of materials.

CHEMISTRY LABORATORY II**COURSE OBJECTIVES**

- To develop the practical knowledge through the instrumental methods of chemical analysis, role of chemistry in engineering applications and environmental impact of water.

LIST OF EXPERIMENTS

1. Determination of alkalinity in water sample.
2. Determination of total, temporary, and permanent hardness of water by EDTA method.
3. Estimation of copper content of the given solution by EDTA method.
4. Estimation of iron content of the given solution using potentiometer.
5. Conductometric precipitation titration using BaCl_2 and Na_2SO_4 .

TOTAL: 30 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to know the concepts of water hardness and analyse various types of water.

COURSE OBJECTIVES

- To provide exposure to the students with hands on experience in various basic engineering practices such as Civil, Mechanical, Electrical and Electronics Engineering.

GROUP A (CIVIL AND MECHANICAL)**I CIVIL ENGINEERING PRACTICE****BUILDINGS**

- Study of plumbing and carpentry components of residential and industrial buildings. Safety aspects.

PLUMBING WORKS

- Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, elbows in household fittings.
- Study of pipe connections requirements for pumps and turbines.
- Preparation of plumbing line sketches for water supply and sewage works.
- Hands-on-exercise:
- Basic pipe connections – Mixed pipe material connection – Pipe connections with different joining components. (e) Demonstration of plumbing requirements of high-rise buildings.

CARPENTRY USING POWER TOOLS ONLY

- a) Study of the joints in roofs, doors, windows and furniture.
- b) Hands-on-exercise:
Wood work, joints by sawing, planing and cutting.

II MECHANICAL ENGINEERING PRACTICE**WELDING**

- Preparation of arc welding of butt joints, lap joints and tee joints.
- Gas welding practice

BASIC MACHINING

- Simple Turning, Facing, Thread cutting and Taper turning
- Drilling Practice

SHEET METAL WORK

- Model making – Trays, funnels, etc.
- Different type of joints.

FITTING

- Square fitting
- Vee – fitting models

DEMONSTRATION ON

- (a) Smithy operations, upsetting, swaging, setting down and bending. Example – Exercise –
Production of hexagonal headed bolt.
- (b) Foundry operations like mould preparation for gear and step cone pulley.

TOTAL: 30 PERIODS

GROUP B (ELECTRICAL AND ELECTRONICS)

III ELECTRICAL ENGINEERING PRACTICE

1. Study of electrical tools and safety measures
2. Basic wiring practices - Stair-case wiring, Fluorescent lamp wiring and Residential house wiring
3. Measurement of electrical parameters such as voltage, current, power & power factor in RLC circuit.
4. Measurement of energy using single phase energy meter.
5. Earthing Practices & Measurement of earth resistance using megger.
6. Study of electrical equipments such as iron box, induction heater.

IV ELECTRONICS ENGINEERING PRACTICE

1. Study of Electronic components and equipments – Resistor, color coding measurement of AC signal parameter (Peak-Peak, RMS, Period, and Frequency) using CRO.
2. Study of logic gates AND, OR, Ex-OR and NOT.
3. Generation of Clock Signal.
4. Soldering practice – Components Devices and Circuits – Using general purpose PCB.
5. Measurement of ripple factor of HWR.
6. Construction and verification of half adder circuit.
7. Construction and verification of half subtractor circuit.
8. Study of Telephone, F.M Radio and Cell Phone.

TOTAL: 30 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- use tools and equipment for fitting, carpentry, sheet metal, welding, electrical wiring and plumbing
- prepare the models by fitting operation & carpentry operation.
- construct electrical wiring circuit and demonstrate practically.

COURSE OBJECTIVES

- To be familiar with the use of word processing software.
- To get exposure in presentation and visualization tools.
- To understand the problem solving techniques and flow charts.
- To learn the basic concepts of C programming.
- To use Arrays, strings, functions, structures and unions.

LIST OF EXERCISES**a) Word Processing****10**

1. Document creation, Text manipulation with Scientific notations.
2. Table creation, Table formatting and Conversion.
3. Mail merge and Letter preparation.
4. Drawing - flow Chart

b) Spread Sheet**10**

5. Chart - Line, XY, Bar and Pie.
6. Formula - formula editor.
7. Spread sheet - inclusion of object, Picture and graphics, protecting the document and sheet.
8. Sorting and Import / Export features.

C) Programming**10**

- 9 Data types, Expression Evaluation, Condition Statements.
- 10 Arrays
- 11 Structures and Unions
- 12 Functions
- 13 File Handling
- 14 Pointers

COURSE OUTCOMES

At the end of this course, the students will be able to

- execute the word processing programs.
- execute C programs for simple applications.
- develop recursive programs.
- develop recursive programs.

TOTAL: 30 PERIODS
