COURSE OBJECTIVES

- To impart knowledge in the fundamental concepts of stress and strain in mechanics of solids and structures.
- To estimate the stresses developed in bars, beams, shafts, cylinders and spheres.
- To understand torsion formulation stresses and deformation
- To study methods and theorems in deflection of beams
- To develop and analyse problem solving skill related to mechanical elements

UNIT I STRESS, STRAIN AND DEFORMATION OF SOLIDS 15

Rigid bodies and deformable solids – Tension, Compression and Shear Stresses – Deformation of simple and compound bars – Thermal stresses – Elastic constants – Volumetric strains –Stresses on inclined planes – principal stresses and principal planes – Mohr’s circle of stress.

UNIT II TRANSVERSE LOADING ON BEAMS AND STRESSES IN BEAM 15

Beams – types transverse loading on beams – Shear force and bending moment in beams – Cantilevers – Simply supported beams and over – hanging beams. Theory of simple bending– bending stress distribution – Load carrying capacity – Proportioning of sections – Flitched beams – Shear stress distribution.

UNIT III TORSION 15

Torsion formulation stresses and deformation in circular and hollows shafts – Stepped shafts– Deflection in shafts fixed at the both ends – Stresses in helical springs – Deflection of helical springs, carriage springs.

UNIT IV DEFLECTION OF BEAMS 15

Double Integration method – Macaulay’s method – Area moment method for computation of slopes and deflections in beams - Conjugate beam and strain energy – Maxwell’s reciprocal theorems.

UNIT V THIN CYLINDERS, SPHERES AND THICK CYLINDERS 15

Stresses in thin cylindrical shell due to internal pressure circumferential and longitudinal stresses and deformation in thin and thick cylinders – spherical shells subjected to internal pressure – Deformation in spherical shells – Lamé’s theorem.

TOTAL: 75 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- understand the fundamental concepts of stress and strain in mechanics of solids and structures.
- analyse and determine beams and trusses in shear forces, bending moments and axial forces.
- gain sufficient knowledge in designing shafts to transmit required power and also springs for its maximum energy storage capacities.
- calculate the deformation behavior of simple structures.
- analyse the critical problems arrive at solutions related to mechanical elements and the deformation behavior for different types of loads.

COURSE OBJECTIVES

- To impart knowledge in the basics of Agriculture
- To introduce the students about the regional and seasonal selection of crops
- To gain knowledge in crop water management
- To study the production practices of crops
- To delineate the role of agricultural and irrigation engineers in relation to various crop production practices.

UNIT I AGRICULTURE AND CROP PRODUCTION 9

Introduction to agriculture and its crop production sub-sectors - field crop production and horticulture; Factors affecting crop growth and production: genetic (internal) and environmental (external) factors; Crop management through environmental modification and adaptation of crops to the existing environment through crop cultural practices

UNIT II CROP SELECTION AND ESTABLISHMENT 9

Regional and seasonal selection of crops; Systems of crop production; Competition among crop plants; Spacing and arrangement of crop plants; Field preparation for crops including systems of tillage; Establishment of an adequate crop stand and ground cover, including selection and treatment of seed, and nursery growing.

UNIT III CROP MANAGEMENT 9

Crop water Management; Crop nutrition management - need for supplementation to soil supplied nutrients, sources, generalized recommendations, methods and timing of application of supplemental nutrients including fertigation scheduling; Crop protection including management of weeds, pests and pathogens; Integrated methods of managing water, nutrients and plant protection; Types and methods of harvest.

UNIT IV PRODUCTION PRACTICES OF AGRICULTURAL CROPS 9

Generalized management and cultivation practices for important groups of field crops in Tamil Nadu: cereal crops, grain legumes, oil seed crops, sugarcane, and fiber crops, and special purpose crops such as those grown for green manure and fodder.

UNIT V PRODUCTION PRACTICES OF HORTICULTURAL CROPS 9

Important groups of horticultural crops in Tamil Nadu such as vegetable crops, fruit crops, flower crops; Cultivation practices of representatives of each group; Special features of production of horticultural crops - green house cultivation.

TOTAL: 45 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- acquire knowledge in factors affecting growth and production of crops
- analyse the regional and seasonal selection of crops

- understand the crop management practices of agricultural crops.
- practice crop management practices of horticultural crops.
- relate agricultural and irrigation engineering in relation to various crop production practices

COURSE OBJECTIVES

- To introduce the students the theory of machines pertaining to agricultural engineering.
- To study various terminologies used in machines
- To understand concept of sliding and rolling friction
- To impart knowledge in gears
- To delineate the concepts of flywheel and balancing

UNIT I TERMINOLOGY**9**

Definitions - Kinematic links - Pairs - Chain - Machines and mechanism - Types and uses –Kinematic inversion of four bar chain and slider crank mechanism. Velocity and acceleration in simple mechanisms - Vector polygon and instantaneous centre methods – Coriolis component of acceleration.

UNIT II FRICTION AND APPLICATIONS**9**

Sliding and rolling friction –friction in screw threads-Bearing and lubrication- Friction clutches- Belt drives- Friction aspects in brakes.

UNIT III MOTION OF CAM AND FOLLOWER**9**

Cam and follower - types - application – displacement diagrams - profile layout for uniform velocity - Uniform acceleration and retardation - simple harmonic and cycloid motion.

UNIT IV GEARS AND GEAR TRAINS**9**

Gears - classification - terminology -law of gearing - tooth profile - interference between rack and pinion. Gear trains - simple - compound reverted. Simple epi-cyclic gear trains.

UNIT V FLYWHEEL AND BALANCING**9**

Inertia - turning moment - flywheel - fluctuation of speed and energy. Balancing of rotating masses and reciprocating masses.

TOTAL: 45 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- Gain inputs in the terminologies pertaining to agricultural machineries.
- Acquire basic knowledge in the friction applications, gear and gear trains.
- apply practical utility in sliding and rolling friction
- to know the motion of cam and follower
- to implement ideas of rotating masses and reciprocating masses

CO5	2	-	-	-	-	-	-	-	-	-	-	-	3	2

COURSE OBJECTIVES

- To introduce students the principle of surveying
- To provide exposure in various methods and applications of surveying to Agricultural Engineering projects.
- To understand the advanced level of surveying equipments
- To demonstrate methodologies involved in levelling
- To study the applications of leveling

UNIT I FUNDAMENTALS AND CHAIN SURVEYING**9**

Definition- Classifications - Basic principles – Equipment and accessories for ranging and chaining – Methods of ranging - well conditioned triangles – Errors in linear measurement and their corrections - Obstacles - Traversing – Plotting – applications- enlarging and reducing figures- Areas enclosed by straight lines - Irregular figures- digital Planimeter.

UNIT II COMPASS AND PLANE TABLE SURVEYING**9**

Compass – Basic principles - Types - Bearing – Systems and conversions – Sources of errors - Local attraction - Magnetic declination-Dip-Traversing - Plotting - Adjustment of closing error – applications - Plane table and its accessories - Merits and demerits - Radiation - Intersection - Resection – Traversing- sources of errors – applications.

UNIT III THEODOLITE AND MODERN SURVEYING**9**

Theodolite - Types - Description - Horizontal and vertical angles - Temporary and Permanent adjustments – Heights and distances– Tangential and Stadia Tacheometry – Subtense methods - Stadia constants - Anallactic lens - Traversing - Gale's table - Total Station- Global Positioning System (GPS).

UNIT IV LEVELLING**9**

Level line - Horizontal line - Datum - Bench marks -Levels and staves - temporary and permanent adjustments – Methods of leveling - Fly levelling - Check levelling - Procedure in levelling - Booking -Reduction - Curvature and refraction - Reciprocal levelling - sources of errors in leveling- Precise levelling - Types of instruments - Adjustments - Field procedure.

UNIT V LEVELLING APPLICATIONS**9**

Longitudinal and Cross-section-Plotting - Contouring - Methods – Characteristics and uses of contours-Plotting – Methods of interpolating contours – computation of cross sectional area and volumes Earthwork calculations - Capacity of reservoirs - Mass haul diagrams

TOTAL: 45 PERIODS**COURSE OUTCOMES**

At the end of the course the student will be able to

- use all surveying equipments,
- gain knowledge in the principles and classification of chain surveying and ranging
- understand the different types of bearing and traversing
- demonstrate the theodolite, total station and global position system
- prepare LS & CS, contour maps and carryout surveying works related to land and civil engineering projects

COURSE OBJECTIVES

- To introduce the scope, importance and key concepts of the agro processing
- To expose the fundamentals of various unit operations in Agricultural Processing
- To gain fundamental knowledge in Evaporation, Filtration, Sedimentation, Processing, Crystallization and Distillation in processing of agricultural produce.
- To impart knowledge in the concepts of size reduction
- To understand the factors influencing various unit operations in agriculture processing

UNIT I EVAPORATION AND CONCENTRATION**9**

Unit operations in food processing –conservation of mass and energy – overall view of an engineering process- dimensions and units – dimensional and unit consistency – dimensionless ratios-evaporation – definition – liquid characteristics – single and multiple effect evaporation-performance of evaporators and boiling point elevation – capacity – economy and heat balance- types of evaporators – once through and circulation evaporators – short tube evaporators and long tube evaporators – agitated film evaporator

UNIT II FILTRATION AND SEDIMENTATION**9**

Filtration – definition –filter media – types and requirements-constant rate filtration – constant pressure filtration – filter cake resistance-filtration equipment – rotary vacuum filter – filter press – sedimentation – gravitational sedimentation of particles in a fluid – Stoke’s law, sedimentation of particles in gas-cyclones – settling under sedimentation and gravitational sedimentation-centrifugal separations – rate of separations – liquid – liquid separation – centrifuge equipment.

UNIT III SIZE REDUCTION**9**

Size reduction – grinding and cutting – principles of comminuting – characteristics of comminuted products – particle size distribution in comminuted products-energy and power requirements in comminuting – crushing efficiency – Rittinger’s, Bond’s and Kick’s laws for crushing-size reduction equipments – crushers – jaw crusher, gyratory crusher-crushing rolls – grinders – hammer mills – rolling compression mills - attrition, rod, ball and tube mills – construction and operation.

UNIT IV PROCESSING**9**

Contact equilibrium separation processes – concentrations – gas-liquid and solid-liquid equilibrium – equilibrium concentration relationships – operating conditions-calculation of separation in contact – equilibrium processes-gas absorption – rate of gas absorption – stage – equilibrium gas – absorption equipment-properties of tower packing – types – construction – flow through packed towers-extraction – rate of extraction – stage equilibrium extraction-equipment for leaching coarse solids – intermediate solids – basket extractor-extraction of fine material – Dorr agitator – continuous leaching – decantation systems – extraction towers-washing – equipments

UNIT V CRYSTALLISATION AND DISTILLATION**9**

Crystallization-Equilibrium –Rate of crystal growth stage-Equilibrium crystallization-Crystallizers- Equipment-Classification- Construction and operation – Crystallizers-Tank-Agitated batch- Swenson-Walker and Vacuum

crystallizers-Distillation-Binary mixtures-Flash and differential distillation-Steam distillation –Theory-Continuous distillation with rectification –Vacuum distillation - Batch distillation-Operation and process-Advantages and limitation-Distillation equipments- Construction and operation-Factors influencing the operation.

TOTAL: 45 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- Understand scope, importance and key concepts of the agro processing
- Know the fundamentals of various unit operations of Agricultural Processing
- use the processing methods of agricultural produce
- apply the concepts of size reduction
- Know the factors influencing various unit operations in agriculture processing.

CO5	2	-	-	-	-	-	-	-	-	-	-	-	3	2

COURSE OBJECTIVES

- To introduce the fundamental knowledge in soil physical parameters
- To impart knowledge in types and methods of soil survey and interpretative groupings
- To understand the phase relationship and laboratory soil compaction methods
- To gain fundamental knowledge in engineering properties of different types of soil
- To study bearing capacity of different types of soil

UNIT I INTRODUCTION AND SOIL PHYSICS 9

Soil - definition - major components – Soil forming minerals and processes - soil profile –Physical properties - texture – density – porosity – consistence - colour- - specific gravity - capillary and non -capillary - plasticity. Soil air - soil temperature - soil water - classification of soil water - Movement soil water. Soil colloids – organic and inorganic matter - Ion exchange - pH – Plant nutrient availability

UNIT II SOIL CLASSIFICATION AND SURVEY 9

Soil taxonomy – Soils of Tamil Nadu and India. Soil survey - types and methods of soil survey – Field mapping- mapping units - base maps -preparation of survey reports - concepts and uses - land capability classes and subclasses - soil suitability -Problem soils – Reclamation.

UNIT III PHASE RELATIONSHIP AND SOIL COMPACTION 9

Phase relations- Gradation analysis- Atterberg Limits and Indices- Engineering Classification of soil – Soil compaction- factors affecting compaction- field and laboratory methods.

UNIT IV ENGINEERING PROPERTIES OF SOIL 9

Shear strength of cohesive and cohesion-less - Mohr-Coulomb failure theory- Measurement of shear strength, direct shear, Tri-axial and vane shear test- -Permeability- Coefficient of Permeability-Darcy's law-field and lab methods - Assessment of seepage - Compressibility.

UNIT V BEARING CAPACITY AND SLOPE STABILITY 9

Bearing capacity of soils - Factors affecting Bearing Capacity- Shallow foundations-Terzaghi's formula- BIS standards - Slope stability - Analysis of infinite and finite slopes- friction circle method slope protection measures.

TOTAL: 45 PERIODS**COURSE OUTCOMES**

At the end of the course the student will be able to

- gain ideas in fundamentals of soil physical parameters and classification of soils.
- acquire knowledge in the procedures involved in soil survey, field soil mapping and suitability of soil.
- understand the soil compaction and engineering classification of soil.
- analyse engineering properties of soil and darcy law.
- apply the concepts of bearing capacity, slope stability and BIS standard for soil.

COURSE OBJECTIVES

- To provide exposure in various methods and applications of surveying to Agricultural Engineering projects.
- To train the student to acquire skill in operating various surveying instruments
- To develop skill to operate levelling instruments
- To train the student, how to demonstrate the total station and gps
- To study the applications of leveling

LIST OF EXPERIMENTS**1. CHAIN SURVEYING**

- a. Ranging, Chaining and Pacing
- b. Chain traversing

2. COMPASS SURVEYING

- a. Triangulation Problem
- b. Compass traversing

3. PLANE TABLE SURVEYING

- a. Radiation
- b. Intersection - Triangulation problem
- c. Plane table traversing

4. THEODOLITE SURVEYING

- a. Measurement of horizontal & vertical angles
- b. Tangential & Stadia Tacheometry

5. LEVELLING

- a. Fly levelling using Dumpy level
- b. Fly levelling using Tilting level
- c. Check levelling
- d. Block Levelling
- e. Radial Contouring

6. DEMONSTRATION OF TOTAL STATION AND GPS**TOTAL: 60 PERIODS****COURSE OUTCOMES**

At the end of this course, the students will be able to

- use all surveying equipments
- gain knowledge in the principles and classification of chain surveying and ranging
- demonstrate the theodolite, total station and global position system
- understand the different types of bearing and traversing

- prepare LS & CS, contour maps and carryout surveying works related to land and civil engineering projects

COURSE OBJECTIVE

- To impart knowledge in the basics of Agriculture
- To introduce the different crop production practices in wet land, dry land and garden land through hands on experience and demonstrations.
- To introduce the students about the regional and seasonal selection of crops
- To gain knowledge in crop water management
- To delineate the role of agricultural and irrigation engineers in relation to various crop production practices.

LIST OF EXPERIMENTS

1. Field preparation studies
2. Seed selection and seed treatment procedures
3. Seed bed and nursery preparation
4. Sowing / Transplanting
5. Biometric observation for crops
6. Nutrient management studies
7. Water management and irrigation scheduling
8. Weed management studies
9. Integrated Pest Management studies
10. Harvesting
11. Post harvesting

TOTAL: 60 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- acquire knowledge in factors affecting growth and production of crops
- analyse the regional and seasonal selection of crops
- understand the seed selection and seed treatment procedures
- know the water management and irrigation scheduling
- integrated pest management

CO5	3	-	-	--	-	-	2	-	-	-	-	3	3	-

COURSE OBJECTIVES

- To develop the reading skills of the students and make them familiarize in skimming and scanning.
- To instill the communication concepts to enhance the students' conversational skills through various practice sessions
- to familiarize them with a variety of business correspondence.
- To inculcate the receptive skills i.e. Listening and Reading and to make the students well versed in the Productive skills and to assist them in improving their vocabulary and comprehension of grammar.

UNIT I READING AND VOCABULARY

Understanding short, real notices, messages - detailed comprehension of factual material- skimming & scanning skills - interpreting visual information - reading for detailed factual information - reading for gist and specific information - reading for grammatical accuracy and understanding of text structure - reading and information transfer.

UNIT II WRITING

Re-arranging appointments - asking for permission - giving instructions - apologizing and offering compensation - making or altering reservations - dealing with requests - giving information about a product.

UNIT III LISTENING

Listening to short telephonic conversation - Listening to short conversation or monologue - Listening to specific information - Listening to conversation- interview, discussion.

UNIT IV SPEAKING

Conversation between the interlocutor and the candidate - general interaction and social language - A mini presentation by each candidate on a business theme - organising a larger unit of discourse - giving information and expressing opinions - two way conversation between candidates followed by further prompting from the interlocutor- Expressing opinions- agreeing and disagreeing

TOTAL: 30 PERIODS

COURSE OUTCOMES

At the end of the course, students will be able to

- enrich the vocabulary through reading and to develop their pronunciation skills.
- prepare flawless reports and proposals.
- listen to speeches and conversations and answer the questions.
- communicate fluently and effectively on any given topic and appear with confidence for on-line tests.

SEMESTER – IV

MA15403

PROBABILITY AND STATISTICS

3 2 0 4

COURSE OBJECTIVES

- To discuss the outcome of a random experiment by a number.
- To learn about the characteristics of the outcomes of a random variable.
- To analyze the decisions made about the population on the basis of sample information.
- To analyze the design of experiments to control the extraneous variables.
- To maintain the quality of the goods manufactured and marketing them at reasonable prices.

UNIT I RANDOM VARIABLES

15

Discrete and continuous random variables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential, Gamma and Normal distributions.

UNIT II TWO - DIMENSIONAL RANDOM VARIABLES

15

Joint distributions – Marginal and conditional distributions – Covariance – Correlation and Linear regression – Transformation of random variables – Central limit theorem (for independent and identically distributed random variables).

UNIT III TESTING OF HYPOTHESIS

15

Sampling distributions - Estimation of parameters - Statistical hypothesis - Large sample test based on Normal distribution for single mean and difference of means - Tests based on t, Chi-square and F distributions for mean, variance and proportion - Contingency table (test for independent) - Goodness of fit.

UNIT IV DESIGN OF EXPERIMENTS

15

One way and Two way classifications - Completely randomized design – Randomized block design – Latin square design - 2² factorial design.

UNIT V STATISTICAL QUALITY CONTROL

15

Control charts for measurements (X and R charts) – Control charts for attributes (p, c and np charts) – Tolerance limits - Acceptance sampling.

TOTAL: 75 PERIODS

COURSE OUTCOMES

At the end of course, students will be able to

- understand the fundamental knowledge of the concepts of probability.
- acquire the knowledge of standard distributions which can describe real life phenomenon.
- learn the sampling distributions and statistical techniques for engineering and management problems.
- realize the principles that are adopted for designing the experiments.
- gain knowledge on the quality control charts and sampling.
-

COURSE OBJECTIVES

- To understand the basic laws of thermodynamics and heat transfer.
- To study the principle of operation of thermal equipments
- To impart knowledge in the properties of mixture of gases
- To introduce modes of heat transfer
- To furnish ideas related to the applications of laws of thermodynamics

UNIT I BASIC CONCEPTS OF THERMODYNAMICS 15

Thermodynamics and Energy – Systems – Types and properties - State and Equilibrium - Processes and Cycles – Forms of Energy – Temperature and Zeroth law of Thermodynamics – Pure substances – Phase change processes of pure substances – Property diagrams – Internal energy – Enthalpy – Energy transfer by Heat, Work and Mass – Applications.

UNIT II FIRST AND SECOND LAW OF THERMODYNAMICS 15

First law of thermodynamics – Energy balance for closed systems and steady flow systems – Applications of First law of Thermodynamics – Energy balance for Unsteady flow processes – Second law of Thermodynamics – Entropy – Carnot principles – Change in Entropy – Entropy and irreversibility -Applications.

UNIT III HEAT ENGINES 15

Internal Combustion Engines – C.I and S.I Engines – Four Stroke and Two Stroke Engines – Gas Turbines - Boilers – Fire Tube Boiler & Water Tube Boilers , Boiler Accessories and Components. Turbines – Impulse Turbine and Reaction Turbine , Turbine Components - Refrigeration Cycle – Vapour Compression & Vapour Absorption System ,Gas Refrigeration System – Environmental friendly Refrigerants – Air Conditioning.

UNIT IV GASES AND VAPOUR MIXTURES 15

Ideal and Real gases – Vander waals equations – Reduced property – Compressibility chart - Properties of mixture of gases – Dalton's law and Gibbs – Dalton law – Internal energy, Enthalpy and specific heats of gas mixtures.

UNIT V HEAT TRANSFER 15

Conduction – Plane Wall, Cylinder system, Composite Walls – Critical insulation thickness – Simple, fins convection – Free convection and forced convection – Flow over Flat plates and Flow through Pipes – Radiation – Black Body, Grey Body Radiation.

TOTAL: 75 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- gain knowledge in different gas power cycles
- use gas power cycles in IC and R&AC applications.
- understand the concepts of internal Combustion Engines
- know the properties of gases and vapour mixtures
- differentiate three modes of heat transfer

COURSE OBJECTIVES

- To study the basic theory and practice for various areas of Agricultural Engineering, application of engineering to the problems of agricultural production.
- To impart knowledge in farm structures
- To introduce students the harvesting and mowing equipments
- To give outline in the cold storage and packaging of agricultural produce
- To define the concepts of energy requirement in agricultural operations

UNIT I INTRODUCTION, SOIL & WATER CONSERVATION AND IRRIGATION ENGINEERING 10

Agricultural Engineering – Introduction – Branches - Importance in national and global scenario – Institutes & organizations – Soil & water - Land development, Soil irrigability classification – Soil erosion and control, Soil conservation methods, Watershed management - Agro meteorology – Soil Water Plant relationship – Sources of water – Tanks – Wells & Reservoirs – Canal Network – Irrigation Scheduling – Irrigation methods – Micro irrigation - Participatory management of Irrigation Systems..

UNIT II FARM STRUCTURES 8

Farm stead, Farm Roads, Cattle sheds, Stanchion barn, Poultry shed, Hog housing, Machinery and implement shed, Storage structures for food grain, feed & forage - Structures for Plant environment - Green houses, Poly houses – Shade net.

UNIT III FARM MACHINERY AND EQUIPMENT 8

Tractor and Power Tiller – Tillage equipment – Sowing, Planting, Fertilizer application, Fertigation equipment - Spraying, Weeding and interculture – Harvesting and Mowing Equipment, Pumps.

UNIT IV AGRICULTURAL PROCESS ENGINEERING 10

Post harvest of crops, Unit operations in agricultural processing, Ripening chamber and Cold Storage - Packing of agricultural produces – Material handling equipments – Milk processing and dairy products.

UNIT V AGRO ENERGY 9

Energy requirement in agricultural operations - Solar (Thermal and Photovoltaic), Wind mills, Biogas energy and their utilization in agriculture – Gasification of biomass for IC Engines – Energy efficient cooking stoves and alternative cooking fuels – agricultural waste and their utilization.

TOTAL: 45 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- acquire knowledge in soil water conservation, irrigation engineering and farm structures
- utilize the agricultural waste effectively
- understand the post harvest technology of agricultural crops
- know the energy efficient cooking stoves and alternative cooking fuels
- understand the milk processing and dairy products

COURSE OBJECTIVES

- To present the concepts of erosion so that students get a sound knowledge in the problems associated with it.
- To introduce the Classification of eroded soils and Runoff computation for soil conservation
- To impart knowledge in various practices to control erosion
- To study the water harvesting principles and techniques
- To enable the students to make use of the principles and concepts to solve issues related to soil and water management.

UNIT I SOIL EROSION PRINCIPLES 9

Approaches to soil conservation – Soil conservation in India - Erosion – Agents - Causes - Mechanics of water erosion – Soil erosion problems - Types of water erosion: Raindrop erosion, Sheet erosion, Rill erosion, Gully erosion, Stream bank erosion – Classification of Gully – Gully Control Structures: Drop Spillway, Drop Inlet, Chute Spillways - Prerequisites for soil and water conservation measures.

UNIT II ESTIMATION OF SOIL EROSION 9

Runoff computation for soil conservation: SCS-CN method – Evolution of Universal Soil Loss Equation: Applications and Limitations – Modified Universal Soil Loss Equation – Revised Universal Soil Loss Equation-2 - Permissible erosion – Land use capability classification - Classification of eroded soils.

UNIT III EROSION CONTROL MEASURES 10

Agronomic practices: contour cultivation - strip cropping – tillage practices – Soil management practices – Bunding: Types and design specifications - Mechanical measures for hill slopes – Terracing: Classification and design specification of bench terrace – Grassed waterways: Location, construction and maintenance – Types of temporary and permanent gully control structures.

UNIT IV WATER CONSERVATION MEASURES 9

In-situ soil moisture conservation – Water harvesting principles and techniques: Micro catchments, catchment yield using morphometric analysis - Farm ponds: Components, Design, Construction and Protection – Check dams - Earthen dam – Retaining wall.

UNIT V SEDIMENTATION 8

Sediment: Sources – Types of sediment load – Mechanics of sediment transport – Estimation of bed load – Sediment Graph - Reservoir sedimentation: Basics - Factors affecting sediment distribution pattern, Rates of reservoir sedimentation - Silt Detention Tanks.

TOTAL: 45 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- gain knowledge in the concepts of erosion and sedimentation.
- design specification of terracing

- implement water harvesting principles and techniques
- know the construction and protection of dams
- understand the factors affecting sediment distribution pattern.

COURSE OBJECTIVES

- To introduce the student the concept of hydrological aspects of water availability and requirements
- To give idea in the factors affecting runoff
- To study the properties of aquifers
- To impart knowledge to quantify, control and regulate the water resources
- To develop skill to conduct Spatial analysis of rainfall data and design of water storage reservoirs

UNIT I PRECIPITATION AND ABSTRACTIONS**10**

Hydrological cycle- Meteorological measurements – Requirements, types and forms of precipitation - Rain gauges-Spatial analysis of rainfall data using Thiessen and Isohyetal methods- Interception - Evaporation. Horton's equation, pan evaporation measurements and evaporation suppression - Infiltration-Horton's equation - double ring infiltrometer, infiltration indices.

UNIT II RUNOFF**8**

Watershed, catchment and basin - Catchment characteristics - factors affecting runoff - Run off estimation using empirical - Strangé's table and SCS methods – Stage discharge relationships- flow measurements- Hydrograph – Unit Hydrograph – IUH

UNIT III FLOOD AND DROUGHT**9**

Natural Disasters-Flood Estimation- Frequency analysis- Flood control- Definitions of droughts- Meteorological, hydrological and agricultural droughts- IMD method-NDVI analysis- Drought Prone Area Programme (DPAP)

UNIT IV RESERVOIRS**8**

Classification of reservoirs, General principles of design, site selection, spillways, elevation – area - capacity - storage estimation, sedimentation - life of reservoirs – rule curve

UNIT V GROUNDWATER AND MANAGEMENT**10**

Origin- Classification and types - properties of aquifers- governing equations – steady and unsteady flow - artificial recharge - RWH in rural and urban areas

TOTAL: 45 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- understand the key drivers on water resources, hydrological processes and their integrated behaviour in catchments
- gain knowledge in properties of aquifers
- to construct and apply a range of hydrological models to surface water and groundwater problems including Hydrograph, Flood/Drought management, artificial recharge
- to conduct Spatial analysis of rainfall data
- to design water storage reservoirs

CO5	2	2	2	3	3	2	2	-	2	2	3	1	2	3

COURSE OBJECTIVES

- To introduce the students the mechanics of fluids through a thorough the properties and behaviour of fluids under static conditions.
- To impart idea in the dynamics of fluids through the control volume approach
- To expose the applications of the conservation laws
- To study the various hydraulic engineering problems like open channel flows and hydraulic pumps.
- To understand and practice the theory related to hydraulic engineering.

UNIT I PROPERTIES OF FLUIDS**15**

Properties of fluids – definition – units of measurement - Mass density – specific weight, specific volume – specific gravity - equation of state – perfect gas - Viscosity – vapour pressure – compressibility and elasticity - surface tension – capillarity. Fluid pressure and measurement – simple, differential and micro manometers - Mechanical gauges – calibration. Hydrostatic forces on surfaces – total pressure and centre of pressure - Horizontal- vertical and inclined plane surface - Pressure diagram – total pressure on curved surface. Archimedes principles – buoyancy – meta centre – metacentric height.

UNIT II FLUID FLOW ANALYSIS**15**

Types of fluid flow – velocity and acceleration of a fluid particle - Rotational – irrotational circulation and vorticity - Flow pattern – stream line – equipotential line – stream tube path line – streak line – flow net – velocity potential – stream function. Principles of conservation of mass – energy – momentum – continuity equation in Cartesian co-ordinates - Euler's equation of motion.

UNIT III FLOW MEASUREMENTS**15**

Bernoulli's equation – applications - Venturimeter – orifice meter – nozzle meter - rota meter – elbow meter - pitot tube – Orifice – sharp edged orifice discharging free – submerged orifice – mouth piece - Flow through orifice under variable head – time of emptying a tank with and without inflow. Flow through pipes – laminar and turbulent flow in pipes - Reynold's experiment - Darcy – Weisbach equation for friction head loss – Chezy's formula – Manning's formula – Hazen-William's formula - Major and minor losses in pipes – hydraulic gradient line – energy gradient line. Siphon – water hammer in pipes – gradual and sudden closure of valves

UNIT IV OPEN CHANNEL FLOW**15**

Types of flow in channel – uniform flow – most economical section of channel – rectangular – trapezoidal. Specific energy and critical depth - momentum in open channel flow – specific force – critical flow – computation. Flow measurement in channels – notches – rectangular, Cipolletti and triangular – float method - Flow measurement in rivers/ streams/ canals – weirs – free and submerged flow – current meter – Parshall flume.

UNIT V DIMENSIONAL ANALYSIS & PUMPS**15**

Dimensional analysis – Fundamental dimensions – dimensional homogeneity – Rayleigh's method and Buckingham Pi-Theorem - concept of geometric, kinematic and dynamic similarity. Important non dimensional numbers – Reynolds, Froude, Euler, Mach and Weber - Pump terminology – suction lift, suction head, delivery head, discharge, water horse power – selection of pump capacity. Centrifugal pumps – components – working – types of pumps and impellers - Priming – cavitation – specific speed – characteristic curves. Turbine and submersible pumps - Jet pump – jet assembly - Other pumps – Air lift pump - reciprocating pump - sludge pump and vacuum pump- Hydraulic ram.

TOTAL: 75 PERIODS

COURSE OUTCOMES

At the end of this course, the student will be able to

- understand the properties, behaviour of fluids under static conditions.
- relate the theory and practice problems in hydraulic engineering.
- get a basic knowledge of fluids in static, kinematic and dynamic equilibrium.
- know various hydraulic engineering problems like open channel flows and hydraulic pumps
- apply physical laws in addressing problems in hydraulics

COURSE OBJECTIVES

- To conceive and design various farm structures related to agricultural engineering.
- To plan and to draw layout for farm structures
- To enhance the knowledge to design fencing system
- To understand the layouts and design of sanitary and storage structures.

LIST OF EXERCISES

1. Planning and Layout of farmstead
2. Design of stall bam
3. Design of loose housing and milk parlors
4. Design of poultry house
5. Design of a sheep / goat house
6. Design of ventilation system for dairy and poultry house
7. Design of silos – over ground and underground and hay storages
8. Design of farm fencing system
9. Design of farm trusses
10. Design of machinery and equipment shed and workshops
11. Design of septic tank and sanitary structures
12. Design of rural/farm roads and culverts.
13. Design of biogas plant

TOTAL: 60 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- design various form structures related to agricultural engineering
- plan and layout of farmstead
- design machinery and equipment shed and workshops
- Draft biogas plant and storage structures.

COURSE OBJECTIVES

- To practice various aspects of agricultural engineering by performing basic experiments in lab.
- To identify food crops
- To Estimate biometric parameters of different food crops
- To measure soil and water parameters
- To demonstrate Agro-energy equipment

AGROMETEOROLOGY**12**

1. Meteorology – Precipitation – Rain gauges - recording and non-recording rain gauges - Automatic Weather Station (AWS)
2. Measurement of evaporation using evaporimeter
3. Measurement of humidity, sunshine, solar radiation, wind direction and speed

SEEDS AND CROPS**12**

1. Identification of food grains and crops
2. Estimation of germination rate for cereals, pulses and oilseeds by conventional method and using Seed Growth germinator
3. Estimation of biometric parameters of different food crops

SOIL AND WATER PARAMETERS**9**

1. Soil Moisture estimation by different methods
2. pH and EC measurement using electrode device

AGRICULTURAL MACHINERY**12**

1. Demonstration of Agricultural machineries and equipment
2. Demonstration of Agricultural processing equipment
3. Demonstration of Agro-energy equipment

TOTAL: 60 PERIODS**COURSE OUTCOMES**

At the end of this course the student will be able to

- know various aspects of agricultural engineering
- identify food crops
- Estimate biometric parameters of different food crops
- measure soil and water parameters
- demonstrate Agro-energy equipment

COURSE OBJECTIVES

- To verify the various principles by performing the experiments in lab.
- To determine the major and minor losses of fluid flow through pipes.
- To understand the working principles of various pumps by doing performance test.
- To expose the testing of different materials under the action of various forces
- To determine the properties of various materials experimentally.

LIST OF EXPERIMENTS - FLUID MECHANICS

1. Flow Measurement

Calibration of Rotometer.

1. Flow through Venturimeter.
2. Flow through a circular Orifice.
3. Determination of mean velocity by Pitot tube.
4. Verification of Bernoulli's Theorem.
5. Flow through a Triangular Notch.
6. Flow through a Rectangular Notch.

2. Losses in Pipes

3. Determination of friction coefficient in pipes.
1. Determination of losses due to bends, fittings and elbows.

3. Pumps

1. Characteristics of Centrifugal pump.
2. Characteristics of Submersible pump.
3. Characteristics of Reciprocating pump.
4. Characteristics of Jet pump.

LIST OF EXPERIMENTS - STRENGTH OF MATERIALS

1. Tension test on mild steel rod.
2. Compression test on wood.
3. Double shear test on metal.
4. Torsion test on mild steel rod.
5. Impact test on metal specimen (Izod and Charpy).
6. Hardness test on metals (Rockwell and Brinell Hardness Tests).
7. Deflection test on metal beam.
8. Compression test on helical spring.
9. Deflection test on carriage spring.
10. Test on Cement.

TOTAL: 60 PERIODS

COURSE OUTCOMES

At the end of this course the student will be able to

- determine the coefficient of discharge through various flow measuring devices.
- measure flow in pipes and determine frictional losses.
- develop characteristic curves of pumps.
- acquire knowledge in the area of material testing
- understand the behavior of various materials.
