EN20101 **ENGLISH COMMUNICATION SKILLS I** **3 0 0 3**

(COMMON TO ALL BRANCHES)

COURSEOBJECTIVES

To enable students to

- impart knowledge about the significance of vocabulary and syntax.
- develop a strong base in the use of English language.
- enrich the reading skills of the students so as to enable them to communicate with confidence in English.
- enhance their basic speaking skills in delivering impromptu talks and participating in conversations with confidence.
- draft effective essays and emails for effective communication.

UNIT I **9**

Language focus - Word Formation, Prefix and suffix, Synonyms, Antonyms; Listening and transferring of information; Reading - Sub-skills of Reading, Skimming, Scanning, inferring; Writing –Defining, Describing gadgets, Process describing, providing examples or evidence; Speaking - Me Chart - personal information name, background, study details, areas of interest- speaking about one's hobbies, strengths and weaknesses, role model and future ambition.

UNIT II **9**

Language focus - Spelling – Homophones - Homonyms - Word used as Nouns and Verbs - Comparative Adjectives; Listening to dialogues; Reading short passages and answering multiple choice and open-ended questions; Writing - E-Mails, Letter inviting delegates, Accepting, Declining; Speaking - Simple Expressions.

UNIT III **9**

Language focus - Phrasal verbs - Acronyms - Abbreviations - Tenses; Listening to informal conversation; Reading - Note Making, Jumbled Sentences, Writing - Use of Cohesive devices and reference words - Paragraph Writing - compare and contrast; Speaking - Discourse Markers, Role play.

UNIT IV **9**

Language focus - Cause and Effect Expressions - Subject Verb Agreement - Wh questions - Yes or No questions - Listening to short talks and answering questions; Reading - developing hints, - Writing - Instructions, Minutes of meeting , Speaking - Narration of a story, Narrating an incident.

UNIT V **9**

Language focus - Articles - Sentence Structures - Single line definition; Listening - Understanding the structure of conversations; Reading - Interpreting visual information - Flow Chart, Pie Chart, Bar Chart and Tabular column; Speaking – Presentation Skills - Presentations on a given topic.

TOTAL PERIODS 45

COURSE OUTCOMES

At the end of the course, the students will be able to

- develop vocabulary and grammar and express their ideas both in speech and writing.
- listen and comprehend classroom lectures, short talks and conversations.
- interpret and analyze a given text effectively and use cohesive devices in written English.
- communicate appropriately and present on different topics.
- write minutes, essays and letters without errors.

MA20101 **MATRICES AND CALCULUS** **3 1 0 4**

(COMMON TO ALL BRANCHES)

OBJECTIVES

To enable the students to

- understand the concepts of Eigen values and Eigen vectors of real matrices and its applications in the process of diagonalization of real symmetric matrices.
- study applications of Rolle's and Mean Value Theorems and also to understand the concept of maxima and minima using derivatives.
- learn the concept of partial differentiation and its applications to maxima and minima of functions of two or more variables.
- develop a thorough knowledge of definite and indefinite integrals
- learn the concepts of multiple integrals and their applications

UNIT I MATRICES **12**

Characteristic equation - Eigenvalues and Eigenvectors of a real matrix , Properties ; Statement and applications of Cayley-Hamilton theorem ; Diagonalisation by Similarity and Orthogonal transformation ; Quadratic form - Reduction of quadratic form to canonical form by orthogonal transformation.

UNIT II DIFFERENTIAL CALCULUS **12**

Limits and Continuity, properties of limit and classification of discontinuities ; Tangent problems ; Differentiation - Standard forms, Successive differentiation and Leibnitz theorem , Mean value theorem , Rolle's theorem, Maxima and Minima, Concavity.

UNIT III FUNCTIONS OF SEVERAL VARIABLES **12**

Partial derivatives ; Euler's theorem for homogenous functions ; Total derivatives ; Differentiation of implicit functions - Jacobians , Taylor's expansion , Maxima and Minima , Method of Lagrangian multipliers.

UNIT IV INTEGRAL CALCULUS **12**

Area Problem - Indefinite and definite integrals ; Properties of integrals ; Methods of integration - Substitution method, Integration by parts, Bernoulli's formula ; Reduction formulae involving exponential and trigonometric functions.

UNIT V MULTIPLE INTEGRALS **12**

Double integration - Cartesian and polar coordinates , Change of order of integration , Change of Variables ; Triple integration in Cartesian co-ordinates ; Area as double integral ; Volume as triple integral.

TOTAL PERIODS: 60

OUTCOMES

At the end of the course, the students will be able to

- determine eigen values and eigen vectors and diagonalize real symmetric matrices.
- classify various types of functions involved in engineering fields, their differentiation techniques and applications
- find partial derivatives and apply the same to find maxima and minima of two or more variables
- implement different methods of integration used in engineering problems
- execute suitable integration techniques to calculate surface areas and volumes.

EEE

PH20101 **ENGINEERING PHYSICS** **3 0 0 3**

(COMMON TO ALL BRANCHES)

COURSE OBJECTIVES

To enable the students to

- understand the basic concepts of properties of matter.
- acquire the knowledge in the areas of ultrasonics and its applications.
- realize the dual nature of matter and applications of Schrodinger wave equation.
- categorize the types of laser and fiber optics.
- identify the different types of crystal structures and crystal growth techniques.

UNIT I PROPERTIES OF MATTER **9**

Elasticity: Hooke's Law - Stress - Strain Diagram; Young's modulus: theory and experiment (uniform and non-uniform bending) ; Twisting couple on a cylinder- Torsional pendulum - Rigidity modulus and moment of inertia.

Viscosity: Co-efficient of viscosity and its dimensions - Rate of flow of liquid in a capillary tube - Poiseuilles' formula - Experiment to determine co-efficient of viscosity of a liquid - Applications of viscosity.

UNIT II ULTRASONICS **9**

Classification of Sound waves ; Properties - Production of ultrasonic waves- Magnetostriction oscillator and piezoelectric oscillator ; Determination of velocity of sound in liquid using acoustic grating ; SONAR; Non destructive testing - Pulse echo system ; Industrial Applications -Welding, drilling and cutting ; Medical Applications - Sonogram.

UNIT III MODERN PHYSICS **9**

Black body radiation - Planck's theory (derivation) ; Compton effect (derivation) ; Matter waves - de-Broglie wavelength ; Wave function - Physical significance of the wave function ; Schrodinger's time independent and time dependent equations - Applications: particle in one dimensional box-degenerate and non-degenerate states.

UNIT IV APPLIED OPTICS **9**

Laser: Characteristics of laser - Stimulated absorption, spontaneous emission and stimulated emission - Population inversion ; Pumping methods ; Types of laser - Nd-YAG, CO_2 and semiconductor lasers (hetero junction) - Applications.

Optical fiber: Principle, propagation of light through optical fiber - expressions for numerical aperture and acceptance angle; Types of optical fibers; Fiber optical communication system (block diagram); Applications.

UNIT V CRYSTAL PHYSICS **9**

Crystalline solids and amorphous solids; Lattice - Unit cell - Crystal system - Bravais lattices; Lattice planes - Miller indices - Derivation of inter-planar spacing in cubic lattice; Calculation of number of

atoms per unit cell , atomic radius , coordination number and packing factor for SC, BCC, FCC and HCP structures ; Crystal Growth Techniques - Bridgman and Czochralski techniques.

TOTAL PERIODS: 45

COURSE OUTCOMES

At the end of the course, the students will be able to

- understand the elastic properties of the materials.
- apply the fundamental knowledge of ultrasonics in engineering and medical field.
- predict the dual nature of matter, radiation and the application of wave nature of particles.
- associate the propagation of light concept for real time applications.
- categorize the basics of crystals, its structures and different crystal growth techniques.

EEE

CH20101 **ENGINEERING CHEMISTRY** **3 0 0 3**

(Common to all B.E./ B.Tech Programmes)

COURSE OBJECTIVES

To enable the students to

- make students conversant with water quality requirements and treatment methods.
- understand the need of adsorption process in surface chemistry.
- acquire basic knowledge of phase rule and significance of alloys.
- relate appropriate laws of thermodynamics in heat transfer process.
- acquaint with the fundamentals of nanomaterials, preparation and its processing.

UNIT I WATER AND ITS TREATMENT **9**

Hardness of water –types –expression of hardness –units –estimation of hardness of water by EDTA–boiler troubles (scale and sludge, priming and foaming, caustic embrittlement and boiler corrosion) –boiler feed water –Treatments-Internal treatment (phosphate and calgon conditioning) external treatment –Ion exchange process–desalination-Reverse Osmosis- Disinfection-Break point chlorination.

UNIT II SURFACE CHEMISTRY AND CATALYSIS **9**

Adsorption: Types of adsorption –adsorption of gases on solids –adsorption of solute from solutions – adsorption isotherms –Freundlich's adsorption isotherm –Langmuir's adsorption isotherm–applications of adsorption on pollution abatement.

Catalysis: Catalyst –types of catalysis-Homogenous and Heterogeneous –autocatalysis –catalytic poisoning and catalytic promoters –enzyme catalysis–Michaelis –Menten equation.

UNIT III PHASE RULE AND ALLOYS **9**

Phase rule: Introduction, and explanation of terms with examples, One Component System: Water System- Reduced phase rule- Two Component Systems- Lead- Silver system, Zn-Mg system. Alloys: Introduction – Definition – properties of Alloys- Functions - Ferrous alloys- Nichrome and Stainless Steel- Heat treatment of steel: Non Ferrous alloys; Brass and Bronze.

UNIT IV CHEMICAL THERMODYNAMICS **9**

Terminology of thermodynamics-First law- Second law: Entropy- Entropy change for a reversible and irreversible process; Free energy and work function: Helmholtz and Gibbs free energy functions- Criteria of spontaneity: Derivation of - Gibbs Helmholtz Equation -Maxwell Relations- Derivation of Vant Hoff Isotherm and Isochore.

UNIT V NANOMATERIALS **9**

Basics-distinction between molecules, nanoparticles and bulk materials; size-dependent properties.Nanoscale materials properties and uses of nanocluster, rods, tubes (CNT) and wires. Preparation of nanoparticles- thermolysis, hydrothermal, solvothermal, Preparation of Carbon nanotube by chemical vapour deposition, laser ablation; applications of nanomaterials.

TOTAL PERIODS: 45

COURSE OUTCOMES

At the end of the course, the students will be able to

- analyze the water quality parameters and treatment methods.
- employ the concepts of surface chemistry and its application in various fields
- differentiate the various states in a equilibrium on a heterogeneous system.
- interpret the thermodynamic laws in energy calculations.
- elaborate the importance and advancements of nanomaterials.

EEE

ME20101 **ENGINEERING GRAPHICS** **2 1 0 3**
(COMMON TO ALL BRANCHES)

COURSE OBJECTIVES

To enable the students to

- familiarize concepts like dimensioning, conventions and standards related to Engineering drawing and imbibe knowledge on plane curves and projection of points
- understand on projection of lines and plane surfaces
- develop the visualization skills for understanding the projection of solids
- illustrate on sectioning of solids and development of surfaces for simple solids
- comprehend the orthographic projection and isometric view

CONCEPTS AND CONVENTIONS (Not for Examination) **2**

Importance of graphics in engineering applications – Use of drafting instruments; BIS conventions and specifications; Size, layout and folding of drawing sheets; Lettering and dimensioning;

UNIT I PLANE CURVES AND PROJECTION OF POINTS **8**

Basic Geometrical constructions, Curves used in Engineering Practices: Conics – Construction of Ellipse, Parabola and Hyperbola by eccentricity method; Construction of cycloid; Construction of involutes of square and circle – Drawing of tangents and normal to the above curves; Introduction to Orthographic Projection - Projection of points in four quadrants.

UNIT II PROJECTION OF LINES AND PLANES **9**

Projection of straight lines (only First angle projections) inclined to both the HP & VP - Determination of true lengths and true inclinations by Change of Position method; Projection of Planes (Square, Pentagon, Hexagon and Circle) inclined to both the principal planes by rotating object method.

UNIT III PROJECTION OF SOLIDS **8**

Projection of simple solids like Square Prism, Pentagonal Prism, Hexagonal Prism, Square Pyramid, Pentagonal Pyramid, Hexagonal Pyramid, Cylinder and Cone when the axis is inclined to one of the principal planes (either horizontal or vertical plane).

UNIT IV SECTION OF SOLIDS AND DEVELOPMENT OF SURFACES **9**

Sectioning of Prisms (Square, Pentagon, Hexagon) and Pyramids (Square, Pentagon, Hexagon), Cylinder and Cone in simple vertical position when the cutting plane is inclined to one of the principal planes (HP & VP) and perpendicular to the other – obtaining true shape of section; Development of lateral surfaces of simple and sectioned solids mentioned above.

UNIT V ORTHOGRAPHIC AND ISOMETRIC PROJETIONS **9**

Representation of Three-dimensional objects – Need for importance of multiple views and their placement – First angle projection – layout views –developing visualization skills through multiple views from pictorial

views of objects; Principles of isometric projection – isometric scale –Isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones; Conversion of Isometric view to orthographic projection.

TOTAL PERIODS 45

COURSE OUTCOMES

At the end of this course, students will be able to

- draw the basic curves and projection of points in four quadrants
- delineate the projections of straight lines and plane surfaces in given quadrant
- comprehend the projection of solids in various positions in first quadrant
- generate the sectioning of solids and development of surfaces
- interpret orthographic and isometric projection of simple solids

EEE

ME20102 **BASIC MECHANICAL ENGINEERING** **3 0 0 3**

COURSE OBJECTIVES

To enable the students to

- become familiar with different power plants and their working principles.
- acquire Knowledge of various boilers with safety measures.
- comprehend the simple functioning of pumps and steam turbines.
- gain knowledge on the basic working principles of IC engines.
- differentiate between the working principle of Refrigeration and Air conditioning systems.

UNIT I POWER PLANT ENGINEERING **9**

Power Plants-Introduction, Classification, Working principle and layout of steam, Gas, Diesel, Hydro-electric, Solar, Geothermal, Tidal and Nuclear Power plants; Merits and Demerits.

UNIT II BOILERS, ACCESSORIES AND MOUNTINGS **9**

Boilers – Introduction, classifications; Low pressure boilers (simple vertical and Cochran boiler); High Pressure boiler (Babcock and Wilcox boiler, Lamont boiler, Benson boiler); Boiler mountings and boiler accessories.

UNIT III PUMPS AND TURBINES **9**

Pumps-Introduction, Classifications, working principle of Reciprocating pumps (single acting and double acting); Centrifugal Pump and multistage centrifugal pump; Air vessels; Turbine-Introduction, working; steam turbine; simple impulse turbine (De-Laval turbine); Reaction turbine (Parson's turbine).

UNIT IV I.C. ENGINES **9**

IC engine –Introduction, Classifications, Working principle of Petrol and Diesel Engines; Four stroke and two stroke cycles; Comparison of four stroke and two stroke engines; IC engines –Cooling system, lubrication system; Electric hybrid vehicle.

UNIT V REFRIGERATION AND AIR CONDITIONING SYSTEM **9**

Refrigeration and Air Conditioning –Introduction, terminology, explanations; Principle of vapor compression and absorption system; Typical domestic refrigerator –Layout, working, merits and demerits; Window and Split type room Air conditioners.

TOTAL PERIODS 45

COURSE OUTCOMES

At the end of this course, students will be able to

- understand the components used in various power plant cycles and explain their working principles.
- analyze different boiler types with mounting and accessories for industrial applications.

- interpret the significance of various pumps and turbines.
- distinguish between petrol, diesel, 2-Stroke and 4-Stroke Engines.
- apply the components of refrigeration and Air conditioning cycle and identify the difference between the cooling systems.

GE20101 **ENGINEERING PRACTICES LABORATORY** **0 0 4 2**

COURSE OBJECTIVES

To enable the students to

- develop their knowledge in basic civil engineering practices such as plumbing, carpentry and its tool usages.
- practice some of mechanical basics such as welding, basic machining, sheet metal work, fitting.
- experience with basic electrical wiring circuits.
- know about the electronic components, color coding signal generation, soldering practice.

GROUP A (CIVIL AND MECHANICAL)

I CIVIL ENGINEERING PRACTICE

BUILDINGS

- Study of plumbing and carpentry components of residential and industrial buildings. Safety aspects.

PLUMBING WORKS

- Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, elbows in household fittings.
- Study of pipe connections requirements for pumps and turbines.
- Preparation of plumbing line sketches for water supply and sewage works.
- Hands-on-exercise:
- Basic pipe connections – Mixed pipe material connection – Pipe connections with different joining components. (e) Demonstration of plumbing requirements of high-rise buildings.

CARPENTRY USING POWER TOOLS ONLY

a) Study of the joints in roofs, doors, windows and furniture.

b) Hands-on-exercise:

Wood work, joints by sawing, planning and cutting.

II MECHANICAL ENGINEERING PRACTICE

WELDING

- Preparation of arc welding of Butt joints, Lap joints and Tee-joints

BASIC MACHINING

- Simple Turning, Facing
- Drilling Practice

SHEET METAL WORK

- Model making – Trays, Funnels, etc.
- Different type of joints.

FITTING

- Vee – Fitting models

DEMONSTRATION

- Smithy operations, upsetting, swaging, setting down and bending. Example – Exercise – Production of hexagonal headed bolt.
- Foundry operations like mould preparation for gear and step cone pulley.

TOTAL PERIODS: 30

GROUP B (ELECTRICAL AND ELECTRONICS)

I. ELECTRICAL ENGINEERING PRACTICE

1. Study of electrical tools and safety measures.
2. Basic wiring practices - Stair-case wiring, Fluorescent lamp wiring and Residential house wiring.
3. Measurement of electrical parameters such as voltage, current, power and power factor in RLC Circuit.
4. Measurement of energy using single phase energy meter.
5. Earthing practices and measurement of earth resistance using megger.
6. Study of electrical equipment's such as iron box, induction heater.

II. ELECTRONICS ENGINEERING PRACTICE

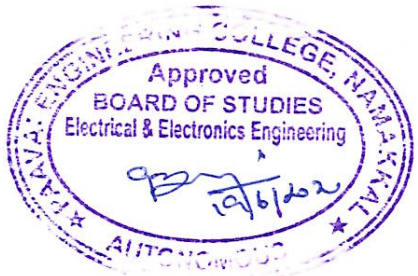
1. Study of electronic components and equipment's– Resistor, color coding measurement of AC signal parameter (Peak-Peak, RMS, Period, and Frequency) using CRO.
2. Study of logic gates AND, OR, Ex-OR and NOT.
3. Generation of clock signal.
4. Soldering practice – Components devices and circuits, using general purpose PCB.
5. Measurement of ripple factor of HWR.
6. Construction and verification of half adder circuit.
7. Construction and verification of half subtractor circuit.
8. Study of telephone, F.M radio and cell phone.

TOTAL PERIODS: 30

COURSE OUTCOMES

At the end of this course, the students will be able to

- use the tools for plumbing and carpentry works
- prepare models by welding, machining, sheet metal and fitting.
- construct electrical wiring circuit and demonstrate practically.
- analyse the signal generation, solder the electronic components based on the circuits.



EEE

CH20102 **CHEMISTRY LABORATORY** 0 0 2 1

(Common to all B.E./ B.Tech Programmes)

COURSE OBJECTIVES

To enable the students to

- acquire practical skills in the determination of water quality parameters through volumetric and instrumental analysis.
- acquaint with the determination of molecular weight of a polymer
- explain the amount of corrosion in steel by instrumentation.
- elucidate the presence of metals in aqueous media by volumetric analysis.

LIST OF EXPERIMENTS (Any Eight Experiments)

1. Determination of DO content of water sample by Winkler's method.
2. Determination of Calcium and Magnesium in water sample by a titration method.
3. Determination of strength of given hydrochloric acid by using pH meter.
4. Determination of strength of acids in a mixture using conductivity meter.
5. Conductometric titration of strong acid Vs Strong base.
6. Estimation of HCl using Na_2CO_3 as primary standard and determination of alkalinity in water sample.
7. Estimation of copper content of the given solution by Iodometry
8. Estimation of iron content of the given solution using potentiometer.
9. Determination of molecular weight of polyvinyl alcohol using Oswald viscometer.
10. Corrosion experiment – weight loss method.

TOTAL PERIODS: 30

COURSE OUTCOMES

At the end of the course, the students will be able to

- outfitted with hands-on experience in the quantitative analysis of water quality parameters.
- evaluate the weight loss in steel
- calculate the molecular weight of a given polymer.
- interpret the presence of metals in aqueous media

EN20201 **ENGLISH COMMUNICATION SKILLS II (COMMON TO ALL BRANCHES)** **3 0 0 3**

COURSE OBJECTIVES

To enable students to

- enhance their ability to listen, read, write and speak English.
- comprehend and draft reports related to their branches of specialization.
- augment their ability to read and comprehend technical texts.
- equip the learners to make effective presentations on topics in engineering and technology.
- participate successfully in Group Discussions.

UNIT I **9**

Language focus - One word substitutions, Active Voice and Passive Voice; Listening to news and announcements; Reading - Developing analytical skills, Deductive and inductive reasoning; Writing - Check list, Recommendations; Speaking - Syllable, Stress, Intonation, Spot light.

UNIT II **9**

Language focus - Collocations - Fixed expressions (adhere to, on the part of etc.) - Idioms and Phrases; Listening to a telephone conversation; Reading - Extensive reading, Summarizing; Writing - Writing a job application – Resume, E-mail format; Speaking – Welcome address, Vote of thanks,.

UNIT III **9**

Language focus - Compound Nouns - Numerical Expression – Preposition; Listening to TED Talks ; Reading - critical reading, Reading articles in newspapers; Writing Technical Reports - Industrial Visit report, Accident report, Feasibility report, Survey report; Speaking - impromptu talks, Introduction of the chief guest, MC.

UNIT IV **9**

Language focus - Direct and Indirect Speech - If Conditionals - Purpose expression; Listening and viewing a model Group discussion; Reading - journals articles; Writing – writing review of a Book, film, product - Drafting project proposal, Letter writing – Business Correspondence - Calling for quotation, Placing orders, complaint ; Speaking -.Group Discussion skills - Initiating, turn taking and concluding the discussion.

UNIT V **9**

Language focus - Editing - Extended Definitions - Silent Letters; Listening to speech by Technologists; Reading - English Corner; Writing – Process description, Product description, Writing SOP, Essay writing; Speaking - Interview Techniques, mock interviews.

TOTAL PERIODS 45

COURSE OUTCOMES

At the end of this course, the students will be able to

- converse with clarity and confidence.
- interpret and analyse a given text.
- draft comprehensive reports, job applications and e-mails.
- make effective presentations using power point.
- participate successfully in Group Discussions and interviews.

EEE

MA20201 COMPLEX VARIABLES AND DIFFERENTIAL EQUATIONS 3 1 0 4

(COMMON TO ALL BRANCHES)

OBJECTIVES

To enable the students to

- gain knowledge on differentiation and integration of vector-valued functions
- understand the differential calculus of complex variables and analytic functions
- recognize the concept of complex integration applied in engineering disciplines
- develop analytical techniques to solve various higher order differential equations with constant and variable coefficients
- study Laplace Transforms of various standard functions, periodic functions and understand the techniques of solving ordinary differential equations using Laplace Transform methods.

UNIT I VECTOR CALCULUS 12

Gradient, Divergence and Curl , Directional derivative ; Irrotational and solenoidal vector fields ; Vector integration - Green's, Gauss divergence and Stokes' theorem , Statement, Verification and Simple applications.

UNIT II ANALYTIC FUNCTIONS 12

Functions of a complex variable ; Analytic functions - Statement of Cauchy-Riemann equations ; Harmonic functions and orthogonal properties , Harmonic conjugate , Construction of analytic functions ; Conformal mapping - w= z+c, cz, 1/z and Bilinear transformation.

UNIT III COMPLEX INTEGRATION 12

Complex integration - Statement and applications of Cauchy's integral theorem and Cauchy's integral formula ; Taylor and Laurent expansions ; Singular points - Residues , Residue theorem ; Contour integration - evaluation of circular and semicircular Contour.

UNIT IV ORDINARY DIFFERENTIAL EQUATIONS 12

Higher order linear differential equations with constant coefficients ; Method of variation of parameters ; Cauchy's and Legendre's linear equations ; Simultaneous first order linear equations with constant coefficients.

UNIT V LAPLACE TRANSFORM 12

Laplace transform - Transform of elementary functions , Properties ; Transform of periodic functions ; Definition of Inverse Laplace transforms - Statement and applications of Convolution theorem ; Initial and Final value theorems ; Solution of linear ODE of second order with constant coefficients by Laplace transforms.

TOTAL PERIODS: 60

COURSE OUTCOMES

At the end of the course, the students will be able to

- familiarize with vector calculus concepts
- gain knowledge on the analytic functions and related concepts
- solve real definite integrals with the help of complex integration techniques
- solve higher order differential equations with constant and variable coefficients
- determine Laplace transforms of various functions and solve initial value problems using Laplace transforms.

EEE

PH20201 **PHYSICS FOR ELECTRONICS ENGINEERING** **3 0 0 3**

(COMMON TO ECE/EEE/ME/BM)

COURSE OBJECTIVES

To enable the students to

- gain knowledge about the conduction properties of metals.
- correlate better understanding the carrier concentration and its variations with temperature in an intrinsic semiconductor.
- analyze ferromagnetic materials, different polarization mechanisms and its applications.
- study the properties of advanced engineering materials and its uses.
- familiarize the quantum mechanical concepts and its applications.

UNIT I CONDUCTING MATERIALS **9**

Conductors - Types of conducting materials ; Classical free electron theory of metals – Postulates; Derivation of electrical conductivity and thermal conductivity - Wiedemann-Franz law and its verifications - Lorentz number - Merits and demerits of classical free electron theory ; Quantum free electron theory - Fermi-Dirac distribution function - Effect of temperature on Fermi function ; Density of energy states-Carrier concentration in metals.

UNIT II SEMICONDUCTING MATERIALS **9**

Types of semiconductors - elemental and compound semiconductor ; Intrinsic semiconductor: Expressions for density of electrons, holes and carrier concentration - Fermi level -Variation of Fermi level with temperature ; Electrical conductivity - Band gap determination ; Extrinsic semiconductors: n-type and p-type semiconductors (Qualitative) ; Hall effect - Determination of Hall coefficient - Applications.

UNIT III MAGNETIC AND DIELECTRIC MATERIALS **9**

Magnetic Materials: Domain theory of ferromagnetism; Hysteresis; Soft and hard magnetic materials; Ferrites -Applications.

Dielectric Materials: Types of polarization - Expression for electronic and ionic polarization -orientation and space charge polarization - Langevin Debye equation; Different types of dielectric breakdown; Applications (Capacitor and transformer).

UNIT IV ADVANCED ENGINEERING MATERIALS **9**

Metallic glasses - preparation, properties and applications; Shape Memory Alloys (SMA): Characteristics, properties of NiTi alloy, application.

Nanomaterials-properties and applications; NLO materials –Birefringence- optical Kerr effect; Classification of Biomaterials and its applications.

UNIT V NANOELECTRONICS AND DEVICES **9**

Scaling trends in CMOS and limitations; Quantum confinement -Density of states for 1D, 2D and 3D nanostructures(qualitative); Tunneling Through a Potential Barrier; Resonant Tunneling Diodes (RTD's);

Coulomb Blockade -Single electron Phenomenon- Single electron Transistor- Single Electron Transistor Logic; Semiconductor Nanowire FETs- Molecular FET.

TOTAL PERIODS: 45

COURSE OUTCOMES

At the end of the course, the students will be able to

- select the metals required for specific applications in the field of engineering and technology.
- discuss the basic idea of doping and determinations of Hall co-efficient.
- apply the knowledge of ferromagnetic and dielectric materials in real time applications.
- realize the function of advanced engineering materials for NLO and biomaterials applications.
- relate the different types of quantum structures and its nanoelectronics device applications.

EEE

CS20201 **PROGRAMMING IN PYTHON** **3 0 0 3**

(Common to Agri/EEE/Mech/Chemical/Food)

COURSE OBJECTIVES

To enable the students to

- understand the basics of computer and basic elements of python programming.
- study various looping statements, control statements and functions in python.
- analyze different string operations and lists.
- learn how to use tuples and dictionaries in python program.
- study the exception handling mechanism and file handling.

UNIT I BASICS OF COMPUTER AND PYTHON PROGRAMMING **9**

Introduction to Computer-Generation and classification of computers, basic organization of computer, number systems (binary, decimal, octal and hexadecimal);algorithm; flowchart, pseudo code; Introduction to python-python interpreter, interactive and script mode, values and types, operators, expressions, statements, precedence of operators, multiple assignments, comments.

UNIT II CONTROL STATEMENTS AND FUNCTIONS IN PYTHON **9**

Conditional and looping Statements- Conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration-while, for, break, continue, pass. Functions- Introduction, inbuilt functions, user defined functions, passing parameters, return values, recursion, lambda functions.

UNIT III STRINGS AND LISTS **9**

Strings-String slices, immutability, string methods and operations; Lists- creating lists, list operations, list methods, mutability, aliasing, cloning lists

UNIT IV TUPLES AND DICTIONARIES **9**

Tuples-Tuple assignment, operations on tuples, lists and tuples, tuple as return value. Dictionaries- operations and methods, nested dictionaries.

UNIT V FILES AND MODULES **9**

Files- Text files, reading and writing files(read number of characters, lines and words in a file) , format operator , command line arguments – errors and exceptions; Modules- Python Modules ; creating own python modules.

TOTAL PERIODS: 45

COURSE OUTCOMES

At the end of this course, students will be able to

- classify and make use of python programming elements to solve and debug simple logical problems
- experiment various control statements, looping statements and functions in python.
- develop python programs using strings and lists.
- implement tuples and dictionaries in python program.
- create python programs to work with files and handling exceptions.

EE20202	CIRCUIT THEORY	3	0	0	3

COURSE OBJECTIVES

To enable the students to

- understand the basics of circuit theory and analysis of electric circuits.
- apply the network elements and theorems for the analysis of complex circuits.
- analyse the coupled circuits using the series and parallel resonance circuit terminologies.
- compute the transient responses of RLC circuits.
- understand the concepts of power measurements.

UNIT I BASICS OF CIRCUIT ELEMENTS AND ANALYSIS 9

Basics of circuit elements - Network reduction, voltage division, current division ,Star – delta transformation: Ohm's Law, Kirchhoff's laws; DC and AC Circuits ;Mesh current and node voltage method of analysis.

UNIT II NETWORK THEOREMS 9

Theorems -Thevenin's theorem, Norton's theorem, Superposition theorem, Maximum power transfer theorem, Reciprocity theorem, Substitution theorem, Compensation theorem, Millman's theorem, Tellegan's theorem; Statement, illustration; Application to DC and AC circuits.

UNIT III RESONANCE AND COUPLED CIRCUITS 9

Series resonance, parallel resonance; Q factor – Bandwidth; Self-inductance, mutual inductance, coefficient of coupling, dot rule; Ideal transformer effective inductance of coupled coils in series and in parallel; Analysis of magnetic circuits.

UNIT IV TRANSIENT ANALYSIS 9

Transient response of RL, RC and RLC circuits using Laplace transform for DC input and AC with sinusoidal input; Introduction to PSpice; Application to electrical circuits

UNIT V POWER MEASUREMENTS 9

Power, power factor and energy; Power measurement - 3 voltmeter and 3 ammeter method ; Solution of three phase balanced circuits and unbalanced circuits ; Three phase power measurement using 2 wattmeter method.

TOTAL PERIODS : 45

COURSE OUTCOMES

At the end of this course, students will be able to

- implement the basic laws and circuit solving methods to calculate current and voltage.

- analyze the complex circuits using the network theorems.
- design the resonance circuit and calculate the inductance under coupled conditions.
- perform transient analysis of electrical circuits.
- apply the concepts of power measurements in electrical circuits.

EEE

MC20201	ENVIRONMENTAL SCIENCE AND ENGINEERING	3	0	0	0

(Common to all B.E./ B.Tech Programmes)
(Mandatory, Non credit Course)

COURSE OBJECTIVES

To enable the students to

- recognize the interdisciplinary and holistic nature of the environment.
- create awareness on ecosystem and biodiversity preserve.
- study about the integrated themes of pollution control and waste management.
- understand the significance of natural resources and environment to stimulate sustainable development.
- assess the socio-economic, political and ethical issues on population with environment.

UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES 9

Environment–Definition, scope, importance, need for public awareness; Forest resources–Use, over exploitation, deforestation, effects on forests and tribal people; Water resources – Use, over utilization of surface and ground water.; Mineral resources – Use, exploitation, environmental effects of extracting and using mineral resources; Food resources: Effects of modern agriculture – fertilizer, pesticide problems; Role of an individual in conservation of natural resources; **Activity**– Slogan making event on conserving natural resources or plantation of trees.

UNIT II ECOSYSTEMS AND BIODIVERSITY 9

Concept of an ecosystem–Structure and function of an ecosystem, producers, Consumers, decomposers, energy flow in the ecosystem; Ecological succession; Food chains - food webs and ecological pyramids; Ecosystems–Types of ecosystem, Introduction, forest ecosystem. aquatic ecosystems(lakes, rivers); Biodiversity– Introduction, definition (genetic - species –ecosystem); Diversity–Value of biodiversity, Consumptive use, productive use, social values, ethical values, aesthetic values; Hotspots of biodiversity; Conservation of biodiversity– In-situ and ex-situ; conservation of biodiversity.

UNIT III POLLUTION 9

Pollution–Définition, air pollution, water pollution, marine pollution, noise pollution, thermal pollution ; Solid waste management– Causes, effects, control measures of urban and industrial wastes; Role of an individual in prevention of pollution; Disaster management– Floods, earthquake, cyclone, landslides; Electronic waste –Sources, causes and its effects.

UNIT IV SOCIAL ISSUES AND ENVIRONMENT 9

Water conservation – rain water harvesting, watershed management; Environmental ethics– climate change, global warming and its effects on flora and fauna, acid rain, ozone layer depletion, nuclear

accidents, nuclear holocaust; Environment protection act– Air (Prevention and Control of Pollution) Act, water (Prevention and control of Pollution) act.

UNIT V HUMAN POPULATION AND ENVIRONMENT 9

Human population– Population growth, variation among nations, population explosion; Family welfare programme; Environment and human health; Human rights; Value education; HIV/AIDS; Women and child welfare; Role of information technology in environment and human health.

TOTAL PERIODS : 45

COURSE OUTCOMES

Upon the completion of the course, students will be able to

- explain the importance of interdisciplinary nature of environment studies, uses and exploitation of natural resources.
- analyze the different types of ecosystem and biodiversity, its values and protecting the environment from degradation.
- investigate the existing environmental challenges related to pollution and its management.
- select suitable strategies for sustainable management of components of environment.
- correlate the impacts of population and human activities on environment.

EEE

PH20205 **PHYSICS LABORATORY** **0 0 2 1**

(COMMON TO AERO/AGRI/BM/CHEM/CIVIL/CSE/CYBER SECURITY/EEE/MCT/MECH/ME/PHARMA)

COURSE OBJECTIVES

To enable the students to

- study the maximum stress applied to the given beam by uniform and non-uniform bending method.
- learn the concept of moment of inertia and rigidity modulus using torsional pendulum.
- demonstrate various experiments and physics concepts applied in viscosity of liquid, sound, light, thermal physics and semiconductor.
- understand the use of Bragg's Law and its relation to crystal structure.

LIST OF EXPERIMENTS (Any seven)

1. Determination of Young's modulus by non- uniform bending method.
2. Determination of Young's modulus by uniform bending method.
3. Determination of rigidity modulus - Torsion pendulum.
4. Determination of coefficient of viscosity of a liquid -Poiseuille's method.
5. Determination of velocity of sound and compressibility of liquid - Ultrasonic interferometer.
6. Determination of particle size using Laser.
7. Determination of acceptance angle in an optical fiber.
8. Determination of lattice parameters using powder XRD (Interpretation and data analysis).
9. Determination of band gap of a semiconductor.
10. Determination of thermal conductivity of a bad conductor - Lee's Disc method.

TOTAL PERIODS: 30

COURSE OUTCOMES

At the end of the course, the students will be able to

- determine the Young's modulus and rigidity modulus of the given material.
- calculate the coefficient of viscosity of a liquid and determine the velocity of ultrasonic waves, compressibility of the given liquid.
- determine the particle size in the given powder (Lycopodium), the characteristics of a given optical fibre, the thermal conductivity of a given bad conductor and band gap of a semiconductor.
- interpret the crystallographic structure, chemical composition of materials.

EEE

CS20203 **PROGRAMMING IN PYTHON LABORATORY** **0 0 2 1**

COURSE OBJECTIVES

To enable the students to

- gain knowledge about basic elements of python and implementation of data structure concepts in python program.
- develop the program functions, strings and lists in python.
- design and implement the tuples and dictionaries in python.
- acquire the knowledge about the file operation.

LIST OF EXPERIMENTS

1. Implement various control statements in python.
2. Create python programs to implement looping statements.
3. Implement user defined functions using python.
4. Develop python programs to perform various string operations.
5. Develop python programs to perform operations on list.
6. Develop python programs to work with Tuples.
7. Create python program to implement dictionary.
8. Implement python program to perform file operations.
9. Implement python programs using modules.
10. Create python program to handle exceptions.

TOTAL PERIODS: 30

COURSE OUTCOMES

At the end of this course, students will be able to

- create python program using various looping and control statements.
- work with functions, strings and lists in python.
- implement tuples and dictionaries in python programming.
- develop python program to perform file operations and handle the exceptions.

COURSE OBJECTIVES

To enable the students to

- understand the basics of circuit theory and analysis of electric circuits.
- apply the network elements and theorems for the analysis of complex circuits.
- analyse the coupled circuits using the series and parallel resonance circuit terminologies.
- compute the transient responses of RLC circuits and concepts of power measurements.

LIST OF EXPERIMENTS

1. Verification of Ohms law.
2. Verification of Kirchoff's laws
3. Verification of Thevenin's and Norton's Theorem.
4. Verification of Superposition theorem.
5. Verification of Maximum Power Transfer theorem
6. Power measurement in 3 phase circuits.
7. Design and simulation of Resonance circuits.
8. Circuit Analysis using CRO
9. Digital simulation of Circuit Transients using PSpice / PSIM.
10. Digital simulation of Network theorems using PSpice / PSIM

TOTAL PERIODS: 30

COURSE OUTCOMES

At the end of this course, students will be able to

- verify the basic laws and circuit solving methods.
- analyse the complex circuits using the network theorems.
- design the resonance circuit and calculate the inductance under coupled conditions.
- perform transient analysis of electrical circuits and concepts of power measurements using Pspice/PSIM.

CO-PO MAPPING

Mapping of Course Outcome (CO's) with Programme Outcomes (PO's) and Programme Specific Outcomes PSO's
(1/2/3 indicates strength of correlation) 3-Strong, 2-Medium, 1-Weak

CO's	PO's												PSO's	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	3	3	1	-	2	2	2	-	2	-	2	1	1	1
CO2	3	3	1	-	2	2	2	-	2	-	2	1	2	2
CO3	3	3	1	-	3	2	2	-	2	-	2	1	2	2
CO4	3	3	1	3	3	2	2	-	2	-	2	1	2	2
