

PAAVAI ENGINEERING COLLEGE, NAMAKKAL - 637 018

(AUTONOMOUS)

B.E. PHARMACEUTICAL ENGINEERING

CURRICULUM

REGULATIONS 2016

(CHOICE BASED CREDIT SYSTEM)

(For the candidates admitted during the Academic Year 2018 - 2019)

SEMESTER I

S.No.	Category	Course Code	Course Title	L	T	P	C
Theory							
1	BS	MA16101	Matrices and Calculus	3	2	0	4
2	HS	EN16101	Technical English I	3	0	0	3
3	BS	PH16101	Engineering Physics	3	0	0	3
4	BS	CH16101	Engineering Chemistry I	3	0	0	3
5	ES	ME16102	Basic Civil and Mechanical Engineering	3	0	0	3
6	ES	CS16101	Computer Programming	3	0	0	3
Practical							
7	BS	PC16101	Physics and Chemistry Laboratory	0	0	4	2
8	HS	EN16102	English Communication Skills Laboratory	0	0	2	1
9	ES	CS16102	Computer Programming Laboratory	0	0	2	1
TOTAL				18	2	8	23

SEMESTER II

S.No.	Category	Course Code	Course Title	L	T	P	C
Theory							
1	BS	MA16201	Differential Equations and Complex Analysis	3	2	0	4
2	HS	EN16201	Technical English II	3	0	0	3
3	BS	PH16202	Applied Physics	3	0	0	3
4	BS	CH16203	Biochemistry	3	0	0	3
5	ES	ME16202	Engineering Graphics	3	2	0	4
6	BS	PT16201	Human Physiology	3	0	0	3
Practical							
7	ES	GE16201	Engineering Practices Laboratory	0	0	4	2
8	ES	CH16205	Biochemistry Laboratory	0	0	4	2
TOTAL				18	4	8	24

OBJECTIVES

To enable students to

- understand the concepts of Eigen values and Eigen vectors of real matrices and its applications in the process of diagonalization of real symmetric matrices.
- study applications of Rolle's and Mean Value Theorems and also to understand the concept of maxima and minima using derivatives.
- learn the concept of partial differentiation and its applications to maxima and minima of functions of two or more variables.
- develop a thorough knowledge of definite and indefinite integrals
- learn the concepts of multiple integrals and their applications

15

UNIT I MATRICES

Characteristic equation – Eigenvalues and Eigenvectors of a real matrix – Properties – Cayley-Hamilton theorem (excluding proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Quadratic form – Reduction of quadratic form to canonical form by orthogonal transformation.

UNIT II DIFFERENTIAL CALCULUS

15

Limit – Continuity, properties of limit and classification of discontinuities - Simple problems. Differentiation – Standard forms, Successive differentiation and Leibnitz theorem. Mean value theorem – Rolle's theorem – maxima, minima using first and second derivative tests.

UNIT III FUNCTIONS OF SEVERAL VARIABLES

15

Partial derivatives – Euler's theorem for homogenous functions – Total derivatives – Differentiation of Implicit functions – Jacobians – Taylor's expansion – Maxima and Minima – Method of Lagrangian multipliers.

UNIT IV INTEGRAL CALCULUS

15

Indefinite and definite integrals - Properties of integrals, Integration of simple function. Methods of Integration – Integration by parts – Reduction formulae involving exponential and trigonometric functions, Bernoulli's formula.

UNIT V MULTIPLE INTEGRALS

15

Double integration – Cartesian and polar coordinates – Change of order of integration – Triple integration in Cartesian co-ordinates – Area as double integral – Volume as triple integral.

TOTAL : 75 PERIODS

OUTCOMES

At the end of this course, the students will be able to

- determine eigen values and eigen vectors and diagonalize real symmetric matrices.
- classify various types of functions involved in engineering fields, their differentiation techniques and applications
- find partial derivatives and apply the same to find maxima and minima of two or more variables
- implement different methods of integration used in engineering problems
- execute suitable integration techniques to calculate surface areas and volumes.

CO5	3	2	2	2	-	-	-	-	-	-	-	1	2	3

COURSE OBJECTIVES

To enable students to

- impart knowledge about the importance of vocabulary and grammar.
- help the students of engineering and technology develop a strong base in the use of English.
- improve the reading skills of the students so as to enable them to communicate with confidence in English.
- develop their basic speaking skills in order to deliver impromptu talks, participate with confidence in conversations.
- enable students to write / draft effective essays and emails for effective communication.

UNIT I VOCABULARY & GRAMMAR 9

General Vocabulary - Prefixes & Suffixes - Words used as nouns and verbs - Comparative adjectives - Phrasal verbs- Acronyms - Abbreviations -Tenses - Active and Passive voice - Modal verbs and Probability - Cause and Effect expressions - Subject-verb agreement - Yes or no questions - Gerund and Infinitives - Imperative Sentences - Prepositions.

UNIT II LISTENING 9

Listening and transferring of information, listening to dialogues, listening to informal conversation- listening to short talks and answering questions- understanding the structure of conversations- telephone etiquettes - note taking.

UNIT III READING 9

Reading - Sub-Skills of reading - skimming - scanning - predicting - Reading comprehension - reading short passages in English and answering multiple choice questions / open-ended questions - Analyzing the use of language in advertisements - Interpreting Visual Information - Flow Chart, Pie Chart, (Transcoding).

UNIT IV WRITING 9

Informal letters - email communication - Developing hints - Writing Instructions, Recommendations – Note Making - Minutes of the Meeting - Use of cohesive devices and reference words - Essay writing - different types of essays - summary writing.

UNIT V SPEAKING 9

Self introduction - Personal information - Name, background, study details, areas of interest, hobbies, strengths and weaknesses, role model and future ambition -Role Play- Presentation on a given topic- Group Discussion skills- fundamentals of GD.

TOTAL PERIODS 45

COURSE OUTCOMES

Upon the completion of the course, students will be able to

- use suitable vocabulary and grammar with confidence and express their ideas both in speech and writing.
- listen and comprehend classroom lectures, short talks and conversations.
- read, interpret and analyze a given text effectively, and use cohesive devices in spoken and written English.
- understand English and converse effectively.
- write flawless sentences, essays and letters.

lasers (hetero junction) –uses.

Optical fiber: Principle and propagation of light through optical fiber– expressions for numerical aperture and acceptance angle–types of optical fibers– fiber optical communication system (block diagram) – endoscope – Fiber optic sensors: temperature and displacement sensors.

UNIT V CRYSTAL PHYSICS

9

Lattice – unit cell – Bravais lattices – lattice planes – Miller indices –derivation for inter-planar spacing in terms of Miller indices– calculation of number of atoms per unit cell , atomic radius , coordination number and packing factor for SC, BCC, FCC and HCP structures. X-ray diffraction: Bragg’s law –diffraction methods – powder and Laue methods (Qualitative treatment only).Growth Techniques: Bridgman and Czochralski techniques.

TOTAL: 45 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- assess the elastic properties of the materials.
- relate the fundamental knowledge of acoustics which would facilitate in acoustical design of buildings and ultrasonics.
- know the development of modern physics and its applications.
- recognize the uses of laser and the propagation of light through fiber optics.
- distinguish the different crystal systems, structural determination and synthesis of crystals.

(Common to all branches)

COURSE OBJECTIVES

- To know the need of polymers for industrial application.
- To understand the interrelation of heat and work within the confines of the laws of thermodynamics.
- To understand the basic concepts of instrumentation, data acquisition, data processing and the principles of analytical techniques and their applications.
- To predict the number of stable phases that may exist in equilibrium for a particular system.
- To acquaint the students with the basics of Nano materials, their properties and applications.

UNIT I POLYMERS

9

Introduction: Classification of polymers – Natural and Synthetic- Functionality – Degree of polymerization: Types of polymerization and Mechanism of Addition (Free Radical, cationic and anionic); condensation and copolymerization. Effect of polymer structure and properties of polymers strength, plastic deformation, physical state and chemical resistance. Plastics-Thermoplastics and Thermosetting plastics -Preparation, properties and uses of Nylon 6:6, Teflon, epoxy resin and polycarbonate (Lexan)-Compounding of Plastics-Constituents and functions -Fabrication methods of Plastics.

UNIT II CHEMICAL THERMODYNAMICS

9

Terminology of thermodynamics-First law- Second law: Entropy- Entropy change for an ideal gas, reversible and irreversible process; Entropy of Phase transition: Clausius inequality. Free energy and work function: Helmholtz and Gibbs free energy functions(problems); Criteria of spontaneity: Gibbs Helmholtz Equation(problems); ClausiusClapeyron equation ; Maxwell Relations- Vant Hoff Isotherm and Isochore (problems).

UNIT III WATER TECHNOLOGY AND SPECTROSCOPIC TECHNIQUES

9

Water quality standards-Hardness of water-Types-expression-units-CaCO₃equivalence-problems and disadvantages- Water quality parameters and their determination methods-Titremetry,ElectroUV and AAS-Spectroscopy -Types- Electromagnetic spectrum – Absorption of radiation – Beer-Lambert’s law – UV-Visible spectroscopy and IR spectroscopy – principles and instrumentation (block diagram only Electronic, Vibrational and rotational transitions. Estimation of iron by colorimetry – flame photometry principles and instrumentation (block diagram only) - estimation of sodium by flame photometry –

UNIT IV PHASE RULE AND ALLOYS

9

Phase rule: Introduction, and explanation of terms with examples, One Component System: Water System- Reduced phase rule- Two Component Systems- Lead- Silver system, Zinc – Magnesium system. Alloys: Introduction – Definition – properties of Alloys- significance of alloying. Functions and effect of alloying elements- Ferrous alloys- Nichrome and Stainless Steel- Heat treatment of steel: Non Ferrous alloys; Brass and Bronze.

UNIT V NANOCHEMISTRY

9

Basics-distinction between molecules, nanoparticles and bulk materials; size-dependent properties. Nanoscale materials- particles: cluster, rods, tubes(CNT) and wires. Synthesis: precipitation, thermolysis, hydrothermal, solvothermal, electrode deposition, chemical vapour deposition, laser ablation; Properties and applications in electronics and communication, Energy sciences and risk discussion and future perspectives.

TOTAL : 45 PERIODS

COURSE OUTCOMES

- To select a polymeric material for a specific engineering application.
- To know the basic concepts of internal energy, enthalpy, entropy, free energy and chemical potential.
- To gain practical experience with chemical process equipment as well as to analyze and interpret data.
- To classify the states in a equilibrium in a heterogeneous system. To become familiar with the types, the heat treatment and properties of alloys .
- To identify the particle size, and the application of Nanomaterials in various fields .

(COMMON TO CSE / EEE / CHEMICAL)

COURSE OBJECTIVES

- To impart basic knowledge of surveying and various civil engineering materials.
- To understand the basic components involved in buildings, dams and bridges
- To gain knowledge of different power plants and their working principles
- To understand the basic working principles of IC engines and boilers
- To distinguish between different types of Refrigeration and Air conditioning systems

A CIVIL ENGINEERING**UNIT I SURVEYING AND CIVIL ENGINEERING MATERIALS 9**

Surveying: Objects – types – classification – principles – measurements of distances – angles – leveling – determination of areas – illustrative examples. Civil Engineering Materials: Bricks – stones – sand – cement – concrete – steel sections.

UNIT II BUILDING COMPONENTS AND STRUCTURES 9

Foundations: Types, Bearing capacity – Requirement of good foundations. Superstructure: Brick masonry – stone masonry – beams – columns – lintels – roofing – flooring – plastering – Mechanics – Internal and external forces – stress – strain – elasticity – Types of Bridges and Dams – Basics of Interior Design and Landscaping.

B MECHANICAL ENGINEERING**UNIT III POWER PLANT ENGINEERING 9**

Introduction, Classification of Power Plants – Working principle of steam, Gas, Diesel, Hydro-electric, Solar and Nuclear Power plants – Merits and Demerits – Pumps and turbines – working principle of Reciprocating pumps (single acting and double acting) – Centrifugal Pump.

UNIT IV IC ENGINES 9

Internal combustion engines as automobile power plant – Working principle of Petrol and Diesel Engines – Four stroke and two stroke cycles – Comparison of four stroke and two stroke engines – Boiler as a power plant.

UNIT V REFRIGERATION AND AIR CONDITIONING SYSTEM 9

Terminology of Refrigeration and Air Conditioning. Principle of vapour compression and absorption system – Layout of typical domestic refrigerator – Window and Split type room Air conditioner.

TOTAL: 45 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- analyze different surveying methods and understanding of various Civil Engineering Materials

- interpret the significance of various components of buildings, dams and bridges
- identify the components used in various power plant cycles.
- distinguish between petrol, diesel, 2-Stroke and 4-StrokeEngines
- explain the components of refrigeration and Air conditioning cycle.

CO5	2	2	2	-	2	-	-	-	-	-	-	1	2	1

COURSE OBJECTIVES

- To learn the organization of a digital computer.
- To be exposed to the number systems.
- To think logically and write pseudo code or draw flow charts for problems.
- To be familiar with programming in C.
- To use arrays, strings, functions, pointers, structures and unions in C.

UNIT I INTRODUCTION TO COMPUTERS 9

Introduction – Characteristics of Computers – Evolution of Computers – Computer Generations – Classification of Computers – Basic Computer organization – Number Systems. Computer Software –Types of Software – Software Development Steps – Internet Evolution - Basic Internet Terminology – Getting connected to Internet Applications. Problem Solving Techniques- Planning the Computer Program – Purpose –Algorithm – Flow Charts – Pseudo code. Application Software Packages- Introduction to Office Packages (notdetailed commands for examination).

UNIT II BASICS OF ‘C’ LANGUAGE 9

Overview of C – Constants, Variables and Data Types – Operators and Expressions – Managing Input and Output operators – Decision Making - Branching and Looping.

UNIT III ARRAYS AND STRINGS 9

Array Concepts- Two Dimensional Array - Passing Arrays to Functions - Multi Dimensional Array. String Operations - Sorting and Searching

UNIT IV FUNCTIONS AND POINTERS 9

Functions – Function Prototypes – Parameter Passing Methods – Recursion – Library Functions. Pointers – Pointers and Functions – Pointers and Strings – Operations on Pointers – Dynamic Memory Allocation

UNIT V STRUCTURE, UNIONS AND FILE HANDLING 9

Structures and Union – Declaring, Accessing, Initialization, Structure assignment, Nested Structure, Array of Structure. File Handling Functions

TOTAL: 45 PERIODS**COURSE OUTCOMES**

At the end of this course, the students will be able to

- gain knowledge about number systems.
- work in office package.
- understand basic concepts of C programs.
- obtain knowledge about user defined function and scope of variables in C.
- acquire knowledge for handling arrays, strings, functions, pointers, structures and unions in C.

(COMMON TO ALL BRANCHES)

PHYSICS LABORATORY- I**COURSE OBJECTIVES**

To enable the students to

- compile various experiments to enhance the basic understanding and concepts of physics in properties of matter, sound, light, thermal physics and electricity.
- learn the concept of ultrasonic waves in liquid using ultrasonic interferometer.

LIST OF EXPERIMENTS

1. a) Determination of wavelength and particle size using Laser.
b) Determination of acceptance angle in an optical fiber.
2. Determination of velocity of sound and compressibility of liquid – Ultrasonic Interferometer.
3. Determination of wavelength of mercury spectrum – Spectrometer grating.
4. Determination of thermal conductivity of a bad conductor – Lee's Disc method.
5. Determination of Young's modulus by non- uniform bending method.

COURSE OUTCOMES

At the end of the course, the students will be able to

- apply Physics principles to evaluate mechanical, electrical, thermal and optical characteristics of materials.
- determine the velocity of ultrasonic waves, compressibility of the given liquid.

CHEMISTRY LABORATORY-I**COURSE OBJECTIVES.**

To enable the students to

- analyze the hardness of water, impurities in water, water quality parameters and nature of chemicals in neutral medium.
- understand the concept of acids and bases, their importance in water.

LIST OF EXPERIMENTS

1. Determination of DO content of water sample by Winkler's method.
2. Determination of chloride content of water sample by Argentometric method.
3. Determination of strength of given hydrochloric acid using pH meter.
4. Determination of strength of acids in a mixture using conductivity meter.
5. Conductometric titration of strong acid Vs Strong base.

TOTAL : 30 PERIODS

COURSE OUT COMES

At the end of the course, the students will be able to

- know the quality of water and chemical processes taking place in different medium.
- gain analytical skills on identification of parameters in water.

Mapping of Course Outcomes with Programme Outcomes (1/2/3 indicates strength of correlation) 3-Strong, 2-Medium, 1-Weak														
COs	Programme Outcomes (POs)													
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO2	2	-	3	2	-	-	-	-	-	-	-	-	-	-
CO3	-	2	1	1	2	-	2	-	-	-	-	-	-	-
CO4	3	2	-	-	3	-	-	-	-	-	-	-	-	-

COURSE OBJECTIVES:**To enable the students to**

- Instill the basic communication concepts to enhance students' communication skills through various lab sessions.
- Help students develop the ability to communicate effectively in spoken English.
- Help students develop their soft skills and interpersonal skills.
- Increase employability by developing students' communication skills in English.

UNIT I FORMAL & INFORMAL CONVERSATION PRACTICE**9**

Role Play conversations - with family members, neighbors, friends, relatives etc. Simple expressions - agreeing/disagreeing, persuading, wishing, consoling, advising, arguing, expressing opinion etc. - Professional dialogues with superiors - Conversation with different professionals in - Government and Corporate Offices, Official Meetings, Educational Institutions, (At the railway junction, malls, post office, bank) etc - every day usage of English

UNIT II ORAL REVIEW, RADIO SHOW & NARRATIVE TECHNIQUES**9**

Oral review of books - Presentation of various radio programs like news, announcements, advertisements, entertainment programs etc. as a team activity. Understanding the basic narrative techniques - Narrating short stories, Narrating real life experiences, Oral interpretation of charts, tables, graphs.

UNIT III RESUME / LETTER WRITING**9**

Preparation of resume- structure - Types of resume - writing the vision statement - Objectives - Types of Letter - Job Application - accepting/declining a Job offer.

UNIT IV PRESENTATION SKILLS & GROUP DISCUSSION**9**

Elements of effective presentation - Structure of a presentation - Speech acts - effective use to presentation tools - Audience analysis - Preparing the PPT slides - Video samples - Importance of GD - in the selection process - Structure of a GD - Moderator - led and other GDs - Strategies in GD - Team work - Body Language - Mock GD - Video samples

UNIT VI INTERVIEW SKILLS

Kinds of interviews—one to one, group interview, telephone interview, online interview, stress interview-
Required Skills– Corporate culture–Mock interviews-Video samples.

TOTAL: 30 PERIODS

COURSE OUTCOMES:

- listen and comprehend classroom lectures, short talks and conversations.
- read, interpret and analyze a given text effectively, and use cohesive devices in spoken and written English.
- understand English and converse effectively.
- write flawless sentences, Job application.

TEXT BOOKS:

- Kalpana.V&Co.,“Communication Skills Laboratory Manual”, Vijay Nicole Imprints Pvt. Limited, Chennai.2013

COURSE OBJECTIVES

- To be familiar with the use of word processing software.
- To get exposure in presentation and visualization tools.
- To understand the problem solving techniques and flow charts.
- To use Arrays, strings, functions, structures and unions.

LIST OF EXERCISES**a) Word Processing****10**

1. Document creation, Text manipulation with Scientific notations.
2. Table creation, Table formatting and Conversion.
3. Mail merge and Letter preparation.
4. Drawing - flow Chart

b) Spread Sheet**10**

5. Chart - Line, XY, Bar and Pie.
6. Formula - formula editor.
7. Spread sheet - inclusion of object, Picture and graphics, protecting the document and sheet.
8. Sorting and Import / Export features.

C Programming**10**

9. Data types, Expression Evaluation, Condition Statements.
10. Arrays
11. Structures and Unions
12. Functions
13. File Handling
14. Pointers

COURSE OUTCOMES

At the end of this course, the students will be able to

- execute the word processing programs.
- execute C programs for simple applications.
- develop recursive programs.
- develop recursive programs.

TOTAL PERIODS: 30

Mapping of Course Outcomes with Programming Outcomes

MA 16201

**DIFFERENTIAL EQUATIONS AND COMPLEX
ANALYSIS**
(Common to all branches)

3 2 0 4

OBJECTIVES

To enable students to

- discuss a wide range of basic mathematical methods for solving different types of problems arising in the fields of Science, Mathematics and Engineering.
- acquire sound knowledge in solving ordinary differential equations that model engineering problems.
- understand the concept of vector calculus, which is applied in all engineering disciplines.
- know the standard techniques of complex variable theory.
- learn the purpose of using transforms and to create a new domain

UNIT I ORDINARY DIFFERENTIAL EQUATIONS 15

Higher order linear differential equations with constant coefficients – Method of variation of parameters -Cauchy's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients.

UNIT II VECTOR CALCULUS 15

Gradient, Divergence and Curl – Directional derivative – Irrotational and solenoidal vector fields.–Vector integration – verifications of Green's, Gauss divergence and Stokes' theorem – simple applications.

UNIT III ANALYTIC FUNCTIONS 15

Functions of a complex variable – Analytic functions – Necessary conditions, Cauchy – Riemann equation and Sufficient conditions (excluding proofs) – Harmonic and orthogonal properties of analytic

UNIT IV COMPLEX INTEGRATION 15

Complex integration – Statement and applications of Cauchy's integral theorem and Cauchy's integral formula– Taylor and Laurent expansions – Singular points – Residues – Residue theorem –Contour integration.

UNIT V LAPLACE TRANSFORM 15

Laplace transform – Transform of elementary functions – Basic properties – Definition of Inverse Laplace transform as contour integral – Convolution theorem(excluding proof)– Initial and Final value theorems – Solution of linear ODE of second order with constant coefficients using Laplace transformation techniques.

TOTAL: 75 PERIODS

OUTCOMES

At the end of this course, the students will be able to

- solve differential equations
- study the basics of vector calculus comprising of gradient, divergence and curl and line, surface and volume integrals and the classical theorems.
- know the concepts of analytic functions and its properties and apply it in conformal mapping.
- gain knowledge in the basics of complex integration and the concept of contour integration which is an important tool for evaluation of certain integrals encountered in practice.
- solve Laplace transform and its properties and give sufficient exposure to the solution of certain linear differential equations.

CO5	3	3	2	3	-	-	-	-	-	-	-	3	3	3

COURSE OBJECTIVES**To enable students to**

- help the students of engineering and technology to enhance their ability to listen, read, write and speak English.
- comprehend and write essays and prepare short project reports related to their branches of specialization.
- enhance their ability to read and comprehend technical texts.
- make effective presentations on topics in engineering and technology.
- participate successfully in Group Discussions.

UNIT I VOCABULARY & GRAMMAR**9**

General Vocabulary- use of articles- different forms of a word (noun, verb) - Collocations - Fixed Expressions (adhere to, on the part of etc.)- Phrasal verbs - Compound nouns - Numerical Expressions - Direct and Indirect Speech - use of discourse markers - if conditionals- Cause and Effect expressions - Editing - Wh questions - One word substitution.

UNIT II LISTENING**9**

Listening to news and announcements, listening to telephone conversation- Listening to model interviews / TED Talks- Interview Techniques.

UNIT III READING**9**

Reading - Developing analytical skills, Deductive and inductive reasoning - Extensive reading- Reading articles in newspapers, journals, manuals- critical reading.

UNIT IV WRITING**9**

Writing- Extended Definitions - Checklist, Recommendations -Formal letters- complaint letters, invitation letters- requisition letters - Writing a job application - Resume (Letter and Email format) - Technical Report Writing - (Industrial Visit, Accident, Feasibility & Project Reports) - Paragraph writing, Essay writing.

UNIT V SPEAKING**9**

Syllable - Stress- Intonation- Silent Letters - Presentations on a given topic - Mini presentation in small groups- group discussions- mock interviews.

TOTAL PERIODS 45

COURSE OUTCOMES

Upon the completion of the course, students will be able to

- Speak with clarity and confidence.
- Read, interpret and analyse a given text.
- Write comprehensive reports, job applications and draft effective e-mails.
- Make effective presentations using power point.
- Participate successfully in Group Discussions.

CO5	-	-	-	2	-	-	-	3	3	3	3	-	-	-

COURSE OBJECTIVES

To enable the students to

- develop knowledge about the conduction properties of metals.
- correlate better understanding on carrier concentration and its variation with temperature in different types of semiconductors.
- compute the different kinds of polarization mechanisms and applications of dielectric materials.
- recognize the different types of magnetic materials and its uses.
- describe the various material characterization techniques.

UNIT I CONDUCTING MATERIALS 9

Introduction: types of conducting materials - classical free electron theory: postulates - derivation of electrical conductivity. Thermal conductivity - derivation. Wiedemann - Franz law and its verifications - Lorentz number - merits and demerits of classical free electron theory. Quantum free electron theory: Fermi - Dirac distribution function and its variation with temperature - density of energy states - carrier concentration in metals- average energy of electrons at 0K.

UNIT II SEMICONDUCTING MATERIALS 9

Introduction: direct and indirect band gap semiconductors - origin of band gap in solids (qualitative treatment only) - concept of effective mass of an electron and hole. Intrinsic semiconductor: expressions for density of electrons, holes, carrier concentration, Fermi level, electrical conductivity and band gap.

Extrinsic semiconductors: derivations for charge carrier in n-type and p-type semiconductors - variation of Fermi level with temperature and impurity concentration. Hall effect - theory and experimental determination of Hall coefficient - Applications.

UNIT III DIELECTRIC MATERIALS 9

Introduction: fundamental definitions in dielectrics - expressions for electronic and ionic polarization mechanisms - orientation polarization (qualitative) - space charge polarization - Langevin - Debye equation - frequency and temperature effects on polarization. Internal field - expression for internal field (cubic structure) – Clausius - Mosotti equation - significance - dielectric loss - dielectric breakdown - various breakdown mechanisms with characteristics - applications of dielectric materials.

UNIT IV MAGNETIC MATERIALS 9

Introduction: basic definitions - origin of magnetic moment - Bohr magneton - magnetic materials: classification of dia, para, ferro magnetic materials. Ferro magnetic domains - energies involved in the growth of magnetic domains – hysteresis - explanation of hysteresis curve based on domain theory - soft and hard magnetic materials - ferrites - applications. Principle - Magneto Resistance (MR) and Giant Magneto Resistance (GMR).

UNIT V MATERIALS CHARACTERIZATION 9

Introduction: Thermogravimetric Analysis (TGA) - Differential Thermal Analysis (DTA) - Differential Scanning Calorimetry (DSC) - Electron Microscope, Scanning Electron Microscope (SEM) - Transmission Electron Microscope (TEM) - Atomic Force Microscope (AFM) - Scanning Tunneling Microscope (STM) – Principle - Electrostatic Force Mode (EFM) and Magnetic Force Mode (MFM).

COURSE OUTCOMES

At the end of this course, the students will be able to

- select the metals required for specific applications in the area of engineering and technologies.
- distinguish between different types of semiconductor and determinations of hall co-efficient.
- classify different kinds of polarization mechanism and uses.
- identify different magnetic materials and giant magneto resistance.
- relate the different types of characterization techniques.

CO2	3	-	3	2	-	-	-	-	-	-	-	-	-	-
CO3	-	2	3	1	-	-	2	-	-	-	-	-	-	-
CO4	3	2	3	-	-	-	-	-	-	-	-	-	-	-
CO5	-	2	3	1	-	-	-	-	-	-	-	-	-	-

COURSE OBJECTIVES

To enable the students to

- develop knowledge about the Bio Chemicals.
- enable students learn the fundamentals of Biochemical Processes and Biomolecules.
- recognize the importance of proteins for building block elements.
- describe the functions of fats and amino acids against germ fighting.
- understand the enzymatic action against bacteria.

UNIT I INTRODUCTION TO BIOMOLECULES 5

Basic principles of organic chemistry, role of carbon, types of functional groups, biomolecules, chemical nature of water, pH and biological buffers.

UNIT II CARBOHYDRATES 8

Carbohydrates (mono, di, oligo & polysaccharides) mutarotation, glycosidic bond, reactions of monosaccharides and reducing sugars Starch, glycogen, cellulose and chitin. Proteoglycans, glycosaminoglycans. hyaluronic acid, chondroitin sulfate.

UNIT III LIPIDS, FATS AND AMINO ACIDS 14

Lipids: Fatty acids, glycerol, triacylglycerol, saponification, iodination, hydrogenation, phospholipids, glycolipids, sphingolipids. Inherited metabolic disorders of Lipid-metabolism -Tay-Saach's disease, Niemann-Pick's disease and Gaucher's disease. Cholesterol, steroids, Bile acids and salts, Gluco and Mineralo - corticosteroids. Aldosterone, cortisone and synthetic derivative-prednisolone. Androgens- testosterone, Estrogens- estrone, estradiol and progesterone. Prostaglandins and their functions. LDL, HDL and VLDL. Amino Acids and Proteins: Classification based on side - chain properties. Structures, hierarchy of organization primary, secondary, tertiary and quaternary structures, glycoproteins, lipoproteins.

UNIT IV NUCLEIC ACIDS AND METABOLIC PATHWAYS 10

Nucleic Acids: Purines, pyrimidines, nucleosides, nucleotides, Chargaff's Rules. Base pairing, A-T and G-C, mRNA, rRNA and tRNA., Watson-Crick structure of DNA. reactions, properties. Functions of Proteins, Enzymes, introduction to biocatalysts, primary and secondary metabolites. Glycolysis, TCA cycle, gluconeogenesis, pentose phosphate shunt, glyoxalate shunt, fatty acid synthesis and oxidation, reactions of amino acids, deamination, transamination and decarboxylation, urea cycle, Bioenergetics - High energy compounds, electronegative potential of compounds, respiratory chain, ATP cycle.

Enzymes: Introduction, Nature, Classification and nomenclature of enzymes. Specificity. Enzyme Kinetics - Michaelis-Menten equation. Factors affecting enzyme action, mechanism of enzyme action. Active site. Immobilization methods.

TOTAL PERIODS 45

COURSE OUTCOMES

At the end of this course, the students will be able to

- ensure students have a strong foundation in the structure and reactions of Biomolecules.
- introduce them to metabolic pathways of the major biomolecules and relevance to clinical conditions.
- correlate Biochemical processes with Biotechnology applications.
- elaborate the mechanism of hormones.
- apply the kinetics of enzyme actions and formation.

CO5	2	1	3	-	3	2	3	1	2	1		2	-	-

COURSE OBJECTIVES

- To enable the students with various concepts like dimensioning, conventions and standards related to Engineering Drawing
- To impart knowledge on the projection of points, lines and plane surfaces
- To improve the visualization skills for better understanding of projection of solids
- To develop the imaginative skills of the students required to understand Section of solids and Developments of surfaces
- To make the students understand the viewing perception of a solid object in Isometric and Perspective projections

Concepts and Conventions (Not for Examination) 2

Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.

UNIT I PLANE CURVES AND FREE HAND SKETCHING 14**Curves Used In Engineering Practices:**

Conics – Construction of ellipse, Parabola and hyperbola by eccentricity method – Construction of cycloid, Epicycloid and Hypocycloid – construction of involutes of squad and circle – Drawing of tangents and normal to the above curves. Construction of spiral curve.

Free Hand Sketching:

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT II PROJECTION OF POINTS, LINES AND PLANE SURFACES 14

Orthographic projection- principles-Principal planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes -Determination of true lengths and true inclinations by rotating line method and traces. Projection of planes inclined to both the principal planes by rotating object method.

UNIT III PROJECTION OF SOLIDS 12

Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes by rotating object method.

UNIT IV PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OF SURFACES 14

Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section. Development of lateral

surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones. Development of lateral surfaces of solids with cut-outs and holes.

UNIT V ISOMETRIC AND PERSPECTIVE PROJECTIONS 14

Principles of isometric projection – isometric scale –Isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions and miscellaneous problems. Perspective projection of simple solids-Prisms, pyramids and cylinders by visual ray method.

INTRODUCTION TO INTERSECTION OF SOLIDS (Not for Examination) 5

Introduction to intersection of surfaces – Line of intersection – Intersection of solids

TOTAL: 75 PERIODS

COURSE OUTCOMES

At the end of this course, the students will be able to

- perform free hand sketching of basic geometrical constructions and multiple views of objects
- draw the projections of points, straight lines and plane surfaces in given quadrant
- understand the projection of solids in various positions in first quadrant
- draw projections and solids and development of surfaces
- prepare isometric and perspective sections of simple solids

COURSE OBJECTIVES

To enable the students to,

- identify all the organelles of an animal cell and their function.
- explain physiological mechanism of various organ systems and to explain the pathophysiology of underlying common diseases.
- understand the structure and functions of the various types of systems of human body.
- provide the knowledge of structure and functioning of cardiovascular system, respiratory system, endocrine system and reproductive system
- provide the knowledge of physiological parameters of normal health and factors affecting various physiological processes in the body.

UNIT I HEAMATOLOGY 9

Composition and functions of blood, functions of plasma proteins, reaction of blood, coagulation of blood, coagulation factors, functions of bone marrow, erythropoiesis, functions of haemoglobin, blood groups.

UNIT II PHYSIOLOGY OF MUSCLES 9

Physiology and properties of skeletal muscle,, smooth muscle, cardiac muscle, Physiology of muscular contraction, excitability and contractibility, isotonic and isometric contractions, refractory period, tonicity, electromyography.

UNIT III RESPIRATORY SYSTEM 9

Functions of respiratory system, role of ciliated epithelium, pleural cavity and intra pleural pressure, mechanism of breathing, resistance to breathing, pulmonary volumes, mechanism of gaseous exchange, control of respiration.

UNIT IV CARDIOVASCULAR SYSTEM 9

Introduction to circulation, functions of circulation, anatomical considerations of heart, cardiac impulse, cardiac cycle, heart sounds, electrocardiogram, heart rate, cardiac output, blood pressure, factors influencing blood pressure, blood velocity, functions of pulmonary circulation, coronary circulation, nervous control and reflex control of blood flow.

UNIT V ENDOCRINE AND REPRODUCTIVE SYSTEM 9

Physiology of Pituitary, thyroid, parathyroid, adrenal and pancreatic hormones and disorders of these glands, endocrine control of growth and metabolism; pineal, thymus, testes, ovaries, physiology of reproductive systems, sex hormones, physiology of fertilization, menstruation, menopause, spermatogenesis and oogenesis, pregnancy and parturition and clinical disorders.

TOTAL PERIODS: 45

COURSE OUTCOMES

At the end of the course, the students will be able to,

- explain basic structure and functions of human cell
- learn about the physiology of various systems of human body
- locate and have idea while dealing with images
- analyze and interpret physiological data to design of medical instruments used for diagnosis
- explain interconnect of various systems

CO5	2	-	2	-	-	-	-	-	-	-	-	-	1	1

(COMMON TO ALL BRANCHES)

COURSE OBJECTIVES**To enable the students to**

- develop their knowledge in basic civil engineering practices such as plumbing, carpentry and its tool usages.
- practice some of mechanical basics such as welding, basic machining, sheet metal work, fitting.
- experience with basic electrical wiring circuits
- know about the electronic components, color coding signal generation, soldering practice..

GROUP A (CIVIL AND MECHANICAL)**I CIVIL ENGINEERING PRACTICE****BUILDINGS**

- Study of plumbing and carpentry components of residential and industrial buildings. Safety aspects.

PLUMBING WORKS

- Study of pipeline joints, its location and functions: valves, taps, couplings, unions, reducers, elbows inhousehold fittings.
- Study of pipe connections requirements for pumps and turbines.
- Preparation of plumbing line sketches for water supply and sewage works.
- Hands-on-exercise:
- Basic pipe connections – Mixed pipe material connection – Pipe connections with different joiningcomponents. (e) Demonstration of plumbing requirements of high-rise buildings.

CARPENTRY USING POWER TOOLS ONLY

- a) Study of the joints in roofs, doors, windows and furniture.
- b) Hands-on-exercise:
Wood work, joints by sawing, planing and cutting.

II MECHANICAL ENGINEERING PRACTICE**WELDING**

- Preparation of arc welding of butt joints, lap joints and tee joints.
- Gas welding practice

BASIC MACHINING

- Simple Turning, Facing, Thread cutting and Taper turning
- Drilling Practice

SHEET METAL WORK

- Model making – Trays, funnels, etc.
- Different type of joints.

FITTING

- Square fitting
- Vee – fitting models

DEMONSTRATION ON

- (a) Smithy operations, upsetting, swaging, setting down and bending. Example –
Exercise –Production of hexagonal headed bolt.
- (b) Foundry operations like mould preparation for gear and step cone pulley.

TOTAL: 30 PERIODS

GROUP B (ELECTRICAL AND ELECTRONICS)

III ELECTRICAL ENGINEERING PRACTICE

1. Study of electrical tools and safety measures
2. Basic wiring practices - Stair-case wiring, Fluorescent lamp wiring and Residential house wiring
3. Measurement of electrical parameters such as voltage, current, power & power factor in RLC circuit.
4. Measurement of energy using single phase energy meter.
5. Earthing Practices & Measurement of earth resistance using megger.
6. Study of electrical equipments such as iron box, induction heater.

IV ELECTRONICS ENGINEERING PRACTICE

1. Study of Electronic components and equipments – Resistor, color coding measurement of AC signal parameter (Peak-Peak, RMS, Period, and Frequency) using CRO.
2. Study of logic gates AND, OR, Ex-OR and NOT.
3. Generation of Clock Signal.
4. Soldering practice – Components Devices and Circuits – Using general purpose PCB.
5. Measurement of ripple factor of HWR.
6. Construction and verification of half adder circuit.
7. Construction and verification of half subtractor circuit.
8. Study of Telephone, F.M Radio and Cell Phone.

TOTAL: 30 PERIODS

COURSE OUTCOMES

At the end of this course, students will be able to

- use the tools for plumbing and carpentry works
- prepare models by -welding, machining, sheet metal and fitting
- construct electrical wiring circuit and demonstrate practically
- analyse the signal generation, solder the electronic components based on the circuits

CO - PO Mapping

CO1	2	2	2	2	2	-	-	-	1	-	-	1	2	3
CO2	2	2	2	2	2	-	-	-	1	-	-	1	2	3
CO3	2	2	2	2	2	-	-	-	1	-	-	1	2	3
CO4	2	2	2	2	2	-	-	-	1	-	-	1	2	3

COURSE OBJECTIVES

To enable the students to

- understand the principles behind the qualitative and quantitative estimation of biomolecules
- gain knowledge on chromatographic analysis
- identify the analysis of body fluids.
- have a sound knowledge of separation technology of proteins and amino acids.

EXPERIMENTS

1. General guidelines for working in biochemistry lab (theory)
2. Units of volume, weight, density and concentration measurements and their range in biological measurements. Demonstration of proper use of volume and weight measurement devices.
3. Accuracy, precision, sensitivity and specificity (theory)
4. Preparation of buffer -titration of a weak acid and a weak base.
5. Qualitative tests for carbohydrates - distinguishing reducing from non-reducing sugars and keto from aldo sugars.
6. Quantitative method for amino acid estimation using ninhydrin - distinguishing amino from imino acid.
7. Protein estimation by Biuret and Lowry's methods.
8. Protein estimation by Bradford and spectroscopic methods.
9. Extraction of lipids and analysis by TLC.
10. Estimation of nucleic acids by absorbance at 260 nm and hyperchromic effect (demo).
11. Enzymatic assay: phosphatase from potato.
12. Enzymatic assay: estimation of glucose by GOD-POD method after hydrolysis of starch with acid and specificity of the enzymatic method.

TOTAL PERIODS 60

COURSE OUTCOMES:

At the end of this course, the students will be able to

- understand the Biochemistry laboratory functional components
- understand the basics principle of preparation of buffers.
- have a sound knowledge of qualitative test of different biomolecules.
- understand the basics knowledge of Biochemical parameter and their interpretation in Blood sample.

Mapping of Course Outcomes with Programme Outcomes (1/2/3 indicates strength of correlation) 3-Strong, 2-Medium, 1-Weak														
COs	Programmes Outcomes (POs)
