|--|---|-----------|---|---|------------------|
| MA23301  | <b>TRANSFORM TECHNIQUES AND PARTIAL DIFFERENTIAL EQUATIONS</b>  | 3         | 1 | 0 | 4                |
| (Common to Aero, Agri, BME, Biotech, Civil, Chemical, EEE, Food, Pharma, Mech, MCT, R&A)   |   |           |   |   |                  |
| <b>COURSE OBJECTIVES</b>   |   |           |   |   |                  |
| To enable the students to  |   |           |   |   |                  |
| 1.   | develop the knowledge of periodic and non-periodic functions and their representations using fourier series.  |           |   |   |                  |
| 2.   | acquaint the student with Fourier transform techniques used in wide variety of situations.                    |           |   |   |                  |
| 3.   | introduce the basic concepts of PDE for solving standard partial differential equations.                      |           |   |   |                  |
| 4.   | acquaint the student with Fourier series techniques in solving heat flow problems used in various situations. |           |   |   |                  |
| 5.   | develop Z transform techniques for discrete time systems.   |           |   |   |                  |
| <b>UNIT I</b>  | <b>FOURIER SERIES</b>   | <b>12</b> |   |   |                  |
| Dirichlet's conditions; General Fourier series; Odd and even functions; Half range series; Statement of Complex form of Fourier Series; Parseval's identity; Harmonic Analysis.  |   |           |   |   |                  |
| <b>UNIT II</b>   | <b>FOURIER TRANSFORMS</b>   | <b>12</b> |   |   |                  |
| Fourier integral theorem (without proof); Fourier transform pair; Sine and Cosine transform - Properties; Transforms of elementary functions; Convolution theorem; Parseval's identity.  |   |           |   |   |                  |
| <b>UNIT III</b>  | <b>PARTIAL DIFFERENTIAL EQUATIONS</b>   | <b>12</b> |   |   |                  |
| Formation of partial differential equations; Lagrange's linear equation; Solutions of four standard types of first order partial differential equations; Linear partial differential equations of second order with constant coefficients. |   |           |   |   |                  |
| <b>UNIT IV</b>   | <b>FOURIER SERIES SOLUTION TO PARTIAL DIFFERENTIAL EQUATIONS</b>  | <b>12</b> |   |   |                  |
| Solutions of One-dimensional wave and heat equation; Steady state two-dimensional heat equation.   |   |           |   |   |                  |
| <b>UNIT V</b>  | <b>Z -TRANSFORMS AND DIFFERENCE EQUATIONS</b>   | <b>12</b> |   |   |                  |
| Z-transforms - Elementary properties; Inverse Z-transform; Method of partial fraction ; Residue method; Convolution theorem; Solution of difference equations by Z-transform.  |   |           |   |   |                  |
| <b>TOTAL PERIODS</b>   |   |           |   |   | <b>60</b>        |
| <b>COURSE OUTCOMES</b>   |   |           |   |   | <b>BT MAPPED</b> |
| At the end of this course, the students will be able to  |   |           |   |   | (Highest Level)  |
| CO1  | classify the properties of periodic and non-periodic vibrations with the help of Fourier series.              |           |   |   | Applying (K3)    |

|     |   |               |
|-----|---|---------------|
| CO2 | apply the Fourier transform to convert the function from frequency domain to time domain.                                 | Applying (K3) |
| CO3 | demonstrate partial differential equations that occur in many engineering applications.                                   | Applying (K3) |
| CO4 | apply Fourier series techniques in solving one and two dimensional heat flow problems and one dimensional wave equations. | Applying (K3) |
| CO5 | apply knowledge of Z transform to analyse linear time invariant systems.  | Applying (K3) |

|--|--|----------|----------|----------|-------------------------------------|
| <b>ME23301</b>   | <b>ENGINEERING THERMODYNAMICS</b>  | <b>3</b> | <b>1</b> | <b>0</b> | <b>4</b>                            |
| <b>COURSE OBJECTIVES</b>   |  |          |          |          |                                     |
| To enable the students to  |  |          |          |          |                                     |
| 1  | acquire knowledge on the basic thermodynamic concepts like processes, zeroth law, first law and application of thermodynamic system. |          |          |          |                                     |
| 2  | comprehend about the second law, Carnot cycle and the concept of entropy.  |          |          |          |                                     |
| 3  | analyze the properties of pure substance and operations of steam power cycle.  |          |          |          |                                     |
| 4  | distinguish between ideal and real gases and their thermodynamics relations.   |          |          |          |                                     |
| 5  | understand the concepts of psychometry properties and processes.   |          |          |          |                                     |
| <b>UNIT I</b>  | <b>BASIC CONCEPT AND FIRST LAW</b>   |          |          |          | <b>12</b>                           |
| Basic concepts - concept of continuum, macroscopic approach; Thermodynamic systems - closed, open and isolated, Property, state, path and process, quasi-static process, work, modes of work; Zeroth law of thermodynamics – concept of temperature and heat, Concept of ideal and real gases; First law of thermodynamics – application to closed and open systems, internal energy, specific heat capacities; steady flow process with reference to various thermal equipment's. |  |          |          |          |                                     |
| <b>UNIT II</b>   | <b>SECOND LAW</b>  |          |          |          | <b>12</b>                           |
| Second law of thermodynamics – Kelvin's and Clausius statements of second law; Reversibility and irreversibility; Carnot theorem - Carnot cycle, reversed Carnot cycle, efficiency, COP; Thermodynamic temperature scale; concept of entropy- entropy of ideal gas, principle of increase of entropy.  |  |          |          |          |                                     |
| <b>UNIT III</b>  | <b>PROPERTIES OF PURE SUBSTANCE AND STEAM POWER CYCLE</b>  |          |          |          | <b>12</b>                           |
| Properties of pure substances – Thermodynamic properties of pure substances in solid, liquid and vapour phases, phase rule, P-V, P-T, T-V, T-S, H-S diagrams; PVT surfaces-thermodynamic properties of steam; Calculations of work done and heat transfer in non-flow and flow processes.  |  |          |          |          |                                     |
| <b>UNIT IV</b>   | <b>IDEAL AND REAL GASES AND THERMODYNAMIC RELATIONS</b>  |          |          |          | <b>12</b>                           |
| Gas mixtures – properties ideal and real gases, equation state, Avagadro's Law, Vander Waal's equation of state, compressibility factor, compressibility chart; Dalton's law of partial pressure - exact differential; T-D relations, Maxwell's relations, Joule –Thomson coefficient.   |  |          |          |          |                                     |
| <b>UNIT V</b>  | <b>PSYCHROMETRY</b>  |          |          |          | <b>12</b>                           |
| Psychometry and psychrometric charts - property calculations of air vapour mixtures, Psychrometric process; Sensible heat exchange processes; Latent heat exchange processes; Adiabatic mixing; evaporative cooling.   |  |          |          |          |                                     |
|  |  |          |          |          | <b>TOTAL PERIODS : 60</b>           |
| <b>COURSE OUTCOMES</b>   |  |          |          |          |                                     |
| At the end of this course, students will be able to  |  |          |          |          | <b>BT MAPPED</b><br>(Highest level) |
| <b>CO1</b>   | understand the basic thermodynamic concepts like process, zeroth law, first law, thermodynamic systems.                              |          |          |          | Understanding (K2)                  |

|     |  |                    |
|-----|--|--------------------|
| CO2 | demonstrate the real time applications of second law, Carnot cycle and the concept of entropy. | Understanding (K2) |
| CO3 | differentiate the properties of pure substances and steam power cycle.                         | Analysing (K4)     |
| CO4 | utilize the properties of ideal and real gas in thermodynamic relation.                        | Applying (K3)      |
| CO5 | apply the psychrometric concepts in various processes.   | Applying (K3)      |

| ME23302  |  | MANUFACTURING PROCESSES |  |  | 3 | 0 | 0                       | 3        |  |
|--|--|-------------------------|--|--|---|---|-------------------------|----------|--|
| <b>COURSE OBJECTIVES</b>   |  |                         |  |  |   |   |                         |          |  |
| To enable the students to  |  |                         |  |  |   |   |                         |          |  |
| 1  | analyze the limitations and scope of manufacturing processes to perform variety of operations.       |                         |  |  |   |   |                         |          |  |
| 2  | compare the different working principles of arc welding, TIG welding and special welding processes.  |                         |  |  |   |   |                         |          |  |
| 3  | enhance the fundamental knowledge in hot and cold working processes with their typical applications. |                         |  |  |   |   |                         |          |  |
| 4  | understand the sheet metal characteristics, operations, and special forming processes.               |                         |  |  |   |   |                         |          |  |
| 5  | learn the various types of powder metallurgy and plastic processing.                                 |                         |  |  |   |   |                         |          |  |
| <b>UNIT I</b>  | <b>METAL CASTING PROCESSES</b>   |                         |  |  |   |   |                         | <b>9</b> |  |
| Casting terminology, hand moulding, Type of patterns: Single piece, split, gated, Pattern materials, Pattern allowances, Moulding sand Properties; Cores – Types and Applications; Moulding machines – Types Melting furnaces - Cupola and Induction furnaces; principle of special casting processes – Shell, investment, Ceramic mould, Pressure die casting - Centrifugal casting, Stir casting - CO <sub>2</sub> casting; Sand Casting defects.  |  |                         |  |  |   |   |                         |          |  |
| <b>UNIT II</b>   | <b>JOINING PROCESSES</b>   |                         |  |  |   |   |                         | <b>9</b> |  |
| Gas welding – flame types, equipment, Electric Arc welding (EAW), Metal inert-Gas (MIG) welding, Tungsten inert-Gas (TIG) welding; types of electrodes, flux material, resistance welding: principle, spot, seam, lap welding, Modern welding processes: Friction Stir welding, Weld defects; Adhesive bonding.  |  |                         |  |  |   |   |                         |          |  |
| <b>UNIT III</b>  | <b>BULK DEFORMATION PROCESSES</b>  |                         |  |  |   |   |                         | <b>9</b> |  |
| Hot working and cold working of metals; Forging processes – Open, impression and closed die forging, Characteristics of the processes; Typical forging operations – Rolling of metals, Types of Rolling mills, Flat strip Shape rolling operations; Defects in rolled parts - Principle of rod and wire drawing, Tube drawing; Principles of Extrusion–Types of Extrusion, Hot and Cold extrusion.   |  |                         |  |  |   |   |                         |          |  |
| <b>UNIT IV</b>   | <b>SHEET METAL PROCESSES</b>   |                         |  |  |   |   |                         | <b>9</b> |  |
| Sheet metal characteristics; Typical shearing operations, stamping, blanking, piercing, bending and drawing operations; Stretch forming operations– Formability of sheet metal; Test methods; Working principle and application of special forming processes -Hydro forming, Rubber pad forming, Metal spinning, Introduction to Explosive forming, Magnetic pulse forming, Peen forming, Super plastic forming, Micro forming, Incremental forming. |  |                         |  |  |   |   |                         |          |  |
| <b>UNIT V</b>  | <b>POWDER METALLURGY AND PLASTIC PROCESSING</b>  |                         |  |  |   |   |                         | <b>9</b> |  |
| Production of metal powder: Atomization, crushing; Blending; Compacting: Die pressing, iso-static pressing; Sintering: Principle, continuous sintering process; Plastic processing: Injection, blow moulding and rotational moulding.  |  |                         |  |  |   |   |                         |          |  |
|  |  |                         |  |  |   |   | <b>TOTAL PERIODS:45</b> |          |  |
| <b>COURSE OUTCOMES</b>   |  |                         |  |  |   |   | <b>BT MAPPED</b>        |          |  |
| At the end of the course, the students will be able to   |  |                         |  |  |   |   | (Highest level)         |          |  |
| CO1  | identify the types of casting and molding processes and melting furnaces.                            |                         |  |  |   |   | Applying (K3)           |          |  |
| CO2  | interpret the various types of welding methods and their applications.                               |                         |  |  |   |   | Understanding (K2)      |          |  |

|     |   |                    |
|-----|---|--------------------|
| CO3 | analyze the various types of forging processes, types of rolling and extrusion processes. | Analysing (K4)     |
| CO4 | comprehend sheet metal characteristics and typical shearing operations.                   | Understanding (K2) |
| CO5 | review different types of plastics and working of Injection molding machines.             | Analysing (K4)     |

| ME23303   | FLUID MECHANICS AND HYDRAULIC MACHINES   | 3 | 0 | 0 | 3                       |
| <b>COURSE OBJECTIVES</b>  |  |   |   |   |                         |
| To enable the students to   |  |   |   |   |                         |
| 1   | gain knowledge of fluid, its properties and behaviour under various conditions.                  |   |   |   |                         |
| 2   | apply Bernoulli's equation to various flow measuring devices.                                    |   |   |   |                         |
| 3   | evaluate the fluid velocity considering major and minor losses.                                  |   |   |   |                         |
| 4   | emphasize the boundary layer concepts and importance of dimensional analysis.                    |   |   |   |                         |
| 5   | comprehend the functioning and characteristic curves of pumps and turbines                       |   |   |   |                         |
| <b>UNIT I</b>   | <b>FLUID PROPERTIES AND FLUID STATICS</b>  |   |   |   | <b>9</b>                |
| Fluid definition and Classification; Properties of fluids - Density, Specific volume, Specific gravity, Specific weight, Viscosity, Compressibility, Bulk modulus, Capillarity and Surface tension; Pressure Measurement - Piezometer, U-tube and Differential Manometers.  |  |   |   |   |                         |
| <b>UNIT II</b>  | <b>KINEMATICS AND DYNAMICS OF FLUID FLOW</b>   |   |   |   | <b>9</b>                |
| Kinematics of flow - Types of fluid flow, Continuity equation in two and three dimensions; Velocity and acceleration of fluid particle; Velocity potential function and Stream function; Dynamics of flow - Euler's equation of motion, Bernoulli's equation, Applications, Venturimeter, Orifice meter and Pitot tube – Navier's stoke statement.  |  |   |   |   |                         |
| <b>UNIT III</b>   | <b>FLOW THROUGH PIPES</b>  |   |   |   | <b>9</b>                |
| Reynold's experiment; Laminar flow through circular pipe (Hagen Poiseulle's equation); Flow through pipes - Loss of head due to friction, Minor head losses, Flow through pipes in series and in parallel.  |  |   |   |   |                         |
| <b>UNIT IV</b>  | <b>FLUID FLOW OVER BODIES AND DIMENSIONAL ANALYSIS</b>   |   |   |   | <b>9</b>                |
| Boundary layer concepts - Types of boundary layer, Boundary layer thickness; Need for dimensional analysis- Methods of dimensional analysis using Buckingham's $\pi$ theorem;   |  |   |   |   |                         |
| <b>UNIT V</b>   | <b>HYDRAULIC PUMPS AND HYDRAULIC TURBINES</b>  |   |   |   | <b>9</b>                |
| Centrifugal pumps - Classifications, Working principle, Velocity triangles, Work done by the impeller; Reciprocating pumps - Classifications, Working Principle (Theory and derivation of discharge, work done and power required to drive a double acting pump) ; Turbines - Classification of turbines, Pelton wheel, Francis turbine, Working principles, Velocity triangles , Work done by water on the runner. |  |   |   |   |                         |
|   |  |   |   |   | <b>TOTAL PERIODS:45</b> |
| <b>COURSE OUTCOMES</b>  |  |   |   |   | <b>BT MAPPED</b>        |
| At the end of the course, the students will be able to  |  |   |   |   | (Highest level)         |
| CO1   | apply the knowledge of various fluid properties at rest and in transit.                          |   |   |   | Applying (K3)           |
| CO2   | utilize the Bernoulli's equation to various fluid flow to kinematics and dynamics of fluid flow. |   |   |   | Applying (K3)           |
| CO3   | analyze the friction losses of fluid while flowing through a pipe to pipeline network.           |   |   |   | Analyzing (K4)          |
| CO4   | illustrate the boundary layer concepts and dimensional analysis.                                 |   |   |   | Understanding (K2)      |

|     |   |                |
|-----|---|----------------|
| CO5 | analyze the performance aspects of fluid machinery for centrifugal pump and turbines. | Analyzing (K4) |
|-----|---|----------------|

| MC23302   | HUMAN VALUES AND GENDER EQUALITY   | 2        | 0 | 0 | 0         |
| <b>COURSE OBJECTIVES</b>  |  |          |   |   |           |
| To enable the students to   |  |          |   |   |           |
| 1.  | define different types of human values and their impact on individual behaviour and societal norms.  |          |   |   |           |
| 2.  | apply principles of personal development such as self-confidence, self-discipline, and resilience to navigate modern challenges effectively.   |          |   |   |           |
| 3.  | evaluate the role of values in shaping professional ethics, civic sense and global citizenship.  |          |   |   |           |
| 4.  | examine the socio-economic factors influencing gender inequality and explore avenues for empowerment and advocacy.   |          |   |   |           |
| 5.  | critically analyze prevalent issues and challenges faced by women, including gender-based violence, discrimination, and cultural biases, and propose measures for their eradication. |          |   |   |           |
| <b>UNIT I</b>   | <b>HUMAN VALUES</b>  | <b>6</b> |   |   |           |
| Value Education - Definition, Types of values; Human values - Acceptance, Consideration. Appreciation, Listening. Empathy, Sympathy, Honesty, Integrity, Wisdom, Decision making, Self-actualization, Character formation towards positive personality, Contentment; - Religious Values - Humility, Compassion, Gratitude. Peace, Justice, Freedom, Equality.           |  |          |   |   |           |
| <b>UNIT II</b>  | <b>PERSONALITY DEVELOPMENT</b>   | <b>6</b> |   |   |           |
| Personal Development - Introspection, Self-confidence, Self-discipline; Flexibility -Peer pressure - Sensitization towards Gender Equality; Reliability; Unity; Modern Challenges of Adolescent Emotions and behavior - Comparison and Competition, Positive and Negative attitudes; Family values; Self- improvement - Physical exercises, Meditation ,Yoga.           |  |          |   |   |           |
| <b>UNIT III</b>   | <b>VALUE EDUCATION TOWARDS NATIONAL AND GLOBAL DEVELOPMENT</b>   | <b>6</b> |   |   |           |
| Professional Values -. Integrity, Responsibility, Punctuality, Dedication - Perseverance - Competence; Civic sense and Responsibility; Global Values - Computer Ethics, Moral Leadership, Code of Conduct; Corporate Social Responsibility; Aesthetic values; National Integration and International understanding of Religious Values – Spirituality, thought process. |  |          |   |   |           |
| <b>UNIT IV</b>  | <b>GENDER EQUALITY</b>   | <b>6</b> |   |   |           |
| Gender Equality - Definition, Empowerment, Economic Equality; Condition of Women in India- Education, Healthcare, Political Representation, Gender-based Violence; Challenging Stereotypes: Parental and Caregiving Responsibilities; Legal and Policy Reform; Cultural Shifts; Global Perspective; Male Chauvinism; Sustainable Development..                          |  |          |   |   |           |
| <b>UNIT V</b>   | <b>WOMEN ISSUES AND CHALLENGES</b>   | <b>6</b> |   |   |           |
| Women Issues and Challenges - female feticide, violence against women; Domestic violence- dowry related abuse and deaths, Physical violence, Emotional abuse; Sexual assault; Honour killing; Eve-teasing- Stalking, e-stalking (cyber-crime).  |  |          |   |   |           |
| <b>TOTAL PERIODS:</b>   |  |          |   |   | <b>30</b> |

| COURSE OUTCOMES   |   | BT MAPPED<br>(Highest Level) |
|---|---|------------------------------|
| At the end of this course, the students will be able to |   |                              |
| CO1   | discuss the concept of human values and their significance in personal and societal development.                  | Understanding (K2)           |
| CO2   | demonstrate introspective skills to enhance personal growth and self-awareness.                                   | Applying (K3)                |
| CO3   | recognize the importance of gender equality in promoting a just and equitable society.                            | Understanding (K2)           |
| CO4   | cultivate a sense of social responsibility and ethical conduct towards achieving national and global development. | Analyzing (K4)               |
| CO5   | analyse the challenges faced by women in various spheres and identify strategies for addressing them.             | Analyzing (K4)               |

| <b>EE23306</b>   | <b>ELECTRICAL MACHINES AND DRIVES</b>   | <b>3</b> | <b>0</b> | <b>2</b> | <b>4</b>             |           |
| <b>COURSE OBJECTIVES</b>   |   |          |          |          |                      |           |
| To enable the students to  |   |          |          |          |                      |           |
| 1.   | understand the fundamentals of electrical drive motor characteristics.                    |          |          |          |                      |           |
| 2.   | recognize the characterization and utilization of different types of starters.            |          |          |          |                      |           |
| 3.   | outline the representation of electrical drives.  |          |          |          |                      |           |
| 4.   | acquire knowledge on the operation of solid state speed control of DC drives.             |          |          |          |                      |           |
| 5.   | identify the voltage and frequency control of AC drives.                                  |          |          |          |                      |           |
| <b>UNIT I</b>  | <b>ELECTRICAL MACHINES</b>  | <b>9</b> |          |          |                      |           |
| Mechanical characteristics - Speed-torque characteristics; Three-phase induction motor - Construction, types, principle of operation, torque-slip characteristics, applications.   |   |          |          |          |                      |           |
| <b>UNIT II</b>   | <b>STARTING METHODS</b>   | <b>9</b> |          |          |                      |           |
| Necessity of starter; Types of D.C motor starters - Two point starter, three point starter, four point starter; Types of AC starter - Direct online starter, Y- $\Delta$ starter, rotor resistance starter.                        |   |          |          |          |                      |           |
| <b>UNIT III</b>  | <b>FUNDAMENTALS OF ELECTRIC DRIVES</b>  | <b>9</b> |          |          |                      |           |
| Basic elements; Types of electric drives; Factors influencing the choice of electrical drives; Heating and cooling curves; Loading conditions and classes of duty; Selection power rating of drive motors; Load equalization.      |   |          |          |          |                      |           |
| <b>UNIT IV</b>   | <b>CONVENTIONAL AND SOLID STATE SPEED CONTROL OF DC DRIVES</b>                            | <b>9</b> |          |          |                      |           |
| Speed control of DC series and shunt motors - Armature and field control; Ward-Leonard control system; Single phase half wave controlled rectifiers; Single phase fully controlled rectifier; Four quadrant chopper; Applications. |   |          |          |          |                      |           |
| <b>UNIT V</b>  | <b>CONVENTIONAL AND SOLID STATE SPEED CONTROL OF AC DRIVES</b>                            | <b>9</b> |          |          |                      |           |
| Speed control of three phase induction motor - Voltage / frequency control, cascade control; Types of slip power recovery scheme; Voltage source inverters fed AC drive; AC voltage controller; Applications.                      |   |          |          |          |                      |           |
| <b>LIST OF EXPERIMENTS</b>   |   |          |          |          |                      |           |
| 1.   | Load test on DC shunt motor.  |          |          |          |                      |           |
| 2.   | Load test on DC series motor.   |          |          |          |                      |           |
| 3.   | Open circuit characteristics and load characteristics of self-excited DC generator.       |          |          |          |                      |           |
| 4.   | Open circuit characteristics and load characteristics of separately-excited DC generator. |          |          |          |                      |           |
| 5.   | Speed Control of DC shunt motor (Armature and Field control).                             |          |          |          |                      |           |
| 6.   | Load test on three phase squirrel cage induction motor.                                   |          |          |          |                      |           |
|  |   |          |          |          | <b>TOTAL PERIODS</b> | <b>75</b> |

| <b>COURSE OUTCOMES</b>   |  |                                      |   |   |   |   |   |   |   |    |    |    |       |   |
|--|--|--------------------------------------|---|---|---|---|---|---|---|----|----|----|-------|---|
| At the end of this course, students will be able to  |  | <b>BT Mapped<br/>(Highest Level)</b> |   |   |   |   |   |   |   |    |    |    |       |   |
| <b>CO1</b>   | describe the characteristics of DC motors under different load conditions. | Understanding (K2)                   |   |   |   |   |   |   |   |    |    |    |       |   |
| <b>CO2</b>   | classify the type of starter for various applications.                     | Applying (K3)                        |   |   |   |   |   |   |   |    |    |    |       |   |
| <b>CO3</b>   | infer the operations of electric drives.                                   | Understanding (K2)                   |   |   |   |   |   |   |   |    |    |    |       |   |
| <b>CO4</b>   | explain the speed control of DC motor drives.                              | Understanding (K2)                   |   |   |   |   |   |   |   |    |    |    |       |   |
| <b>CO5</b>   | interpret the speed control of AC motor drives.                            | Understanding (K2)                   |   |   |   |   |   |   |   |    |    |    |       |   |

| <b>COURSE OBJECTIVES</b>   |  |  |  |   |   |                      |           |
| To enable the students to  |  |  |  |   |   |                      |           |
| 1.   | determine the concepts of hypotheses testing, its need and applications.   |  |  |   |   |                      |           |
| 2.   | equip with statistical techniques for designing experiments, analyzing, interpreting and presenting research data. |  |  |   |   |                      |           |
| 3.   | apply various numerical techniques for solving algebraic/transcendental equations and system of linear equations.  |  |  |   |   |                      |           |
| 4.   | develop the knowledge of numerical differentiation and numerical integration techniques.                           |  |  |   |   |                      |           |
| 5.   | acquaint the knowledge of various techniques and methods of solving ordinary differential equations.               |  |  |   |   |                      |           |
| <b>UNIT I</b>  | <b>TESTING OF HYPOTHESIS</b>   |  |  |   |   |                      | <b>12</b> |
| Sampling theory; Large sample - Tests for single mean, proportion and difference of means; Small sample - Test for single mean and difference of means; Test equality of variances; Chi square test - Goodness of fit, Independence of attributes.   |  |  |  |   |   |                      |           |
| <b>UNIT II</b>   | <b>DESIGN OF EXPERIMENTS</b>   |  |  |   |   |                      | <b>12</b> |
| Completely randomized design; Randomized block design; One way and two way classifications- Latin square design - $2^2$ factorial design.  |  |  |  |   |   |                      |           |
| <b>UNIT III</b>  | <b>SOLUTION OF EQUATIONS AND EIGENVALUE PROBLEMS</b>   |  |  |   |   |                      | <b>12</b> |
| Solution of algebraic and transcendental equations; Fixed point iteration method; Newton Raphson method; Solution of linear system of equations; Gauss elimination method – Pivoting; Gauss Jordan method; Iterative methods of Gauss Jacobi and Gauss Seidel; Eigenvalues of a matrix by Power method and Jacobi's method for symmetric matrices. |  |  |  |   |   |                      |           |
| <b>UNIT IV</b>   | <b>INTERPOLATION, NUMERICAL DIFFERENTIATION AND NUMERICAL INTEGRATION</b>  |  |  |   |   |                      | <b>12</b> |
| Interpolations - Newton's forward and backward difference interpolation; Approximation of interpolation polynomials; Divided differences; Lagrangian methods for equal and unequal intervals; Numerical differentiation and integration by trapezoidal and Simpson's 1/3 rules.  |  |  |  |   |   |                      |           |
| <b>UNIT V</b>  | <b>NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS</b>   |  |  |   |   |                      | <b>12</b> |
| Single step methods: Taylor's series method; Euler's method, Modified Euler's method; Fourth order Runge-Kutta method for solving first order differential equations; Multi step methods: Milne's and Adams - Bash forth predictor corrector methods for solving first order differential equations.   |  |  |  |   |   |                      |           |
|  |  |  |  |   |   | <b>TOTAL PERIODS</b> | <b>60</b> |

| <b>COURSE OUTCOMES</b><br>At the end of this course, the students will be able to |   | <b>BT MAPPED</b><br>(Highest Level) |
|---|---|-------------------------------------|
| CO1   | apply the concept of testing of hypothesis for small and large samples in real life problems  | Applying (K3)                       |
| CO2   | analyse the principles to be adopted for designing the experiments.                           | Analysing(K4)                       |
| CO3   | apply various numerical techniques to solve algebraic and transcendental equations.           | Applying(K3)                        |
| CO4   | derive the concepts of numerical differentiation and integration.                             | Applying (K3)                       |
| CO5   | compute the solution of first order ordinary differential equations by numerical techniques.. | Applying (K3)                       |

|--|--|--|--|---|---|-------------------------|------------------|
| ME23402  | APPLIED THERMODYNAMICS   |  |  | 3 | 0 | 0                       | 3                |
| <b>COURSE OBJECTIVES</b>   |  |  |  |   |   |                         |                  |
| To enable the students to  |  |  |  |   |   |                         |                  |
| 1  | acquire knowledge on the basic thermodynamic cycles used in various thermal devices and their related calculations.  |  |  |   |   |                         |                  |
| 2  | understand the fundamentals of operation of internal combustion engines, the factors affecting their performance, operation, fuel requirements and environmental impact. |  |  |   |   |                         |                  |
| 3  | analyze the various cycles used for power generation, combustion and kinetics involved in turbines.  |  |  |   |   |                         |                  |
| 4  | comprehend design and working principles of air compressors.   |  |  |   |   |                         |                  |
| 5  | acquire the knowledge of designing concepts of refrigeration and its types and also air conditioning processes   |  |  |   |   |                         |                  |
| <b>UNIT I</b>  | <b>THERMODYNAMIC CYCLES</b>  |  |  |   |   |                         | <b>9</b>         |
| Gas power cycles – Basics, types of gas power cycles, Rankine, Otto, Diesel, Dual, Brayton cycles, Calculation of mean effective pressure, and air standard efficiency.  |  |  |  |   |   |                         |                  |
| <b>UNIT II</b>   | <b>INTERNAL COMBUSTION ENGINES</b>   |  |  |   |   |                         | <b>9</b>         |
| Classification - Components and their function- Valve timing diagram and port timing diagram - Actual and theoretical p-V diagram of four stroke and two stroke engines; Governing of I.C. engines; Simple and complex Carburetor; MPFI; Diesel pump and injector system; Battery and Magneto Ignition System ; Principles of Combustion and knocking in SI and CI Engines; Turbulence in S.I. engines; Lubrication and its types -Splash and full pressure lubrication system ; Cooling systems; CRDI; Homogeneous charge compression ignition engines. |  |  |  |   |   |                         |                  |
| <b>UNIT III</b>  | <b>STEAM NOZZLES AND TURBINES</b>  |  |  |   |   |                         | <b>9</b>         |
| Flow of steam through nozzles; shapes of nozzles; effect of friction, critical pressure ratio, supersaturated flow-variation of mass flow rate with pressure ratio; Effect of friction. Metastable flow; Impulse and Reaction principles-compounding, velocity diagram for simple and multi-stage turbines; speed regulations – Governors.   |  |  |  |   |   |                         |                  |
| <b>UNIT IV</b>   | <b>AIR COMPRESSORS</b>   |  |  |   |   |                         | <b>9</b>         |
| Classification and working principle of various types of compressors; work of compression with and without clearance; Volumetric efficiency; Isothermal efficiency and Isentropic efficiency of reciprocating compressors; Multistage air compressor and inter cooling – work of multistage air compressor.  |  |  |  |   |   |                         |                  |
| <b>UNIT V</b>  | <b>REFRIGERATION AND AIR CONDITIONING</b>  |  |  |   |   |                         | <b>9</b>         |
| Refrigerants classification- properties and applications; Vapour compression refrigeration cycle- super heat, sub cooling , Performance calculations; working principle of vapour absorption system - Ammonia , Water, Lithium bromide, water systems (Description only); Air conditioning system - Processes, Types and Working Principles ,Split AC, Window AC, Central AC and inventor AC.  |  |  |  |   |   |                         |                  |
|  |  |  |  |   |   | <b>TOTAL PERIODS:45</b> |                  |
| <b>COURSE OUTCOMES</b>   |  |  |  |   |   |                         | <b>BT MAPPED</b> |
| At the end of the course, the students will be able to   |  |  |  |   |   |                         | (Highest level)  |
| CO1  | analyze the different gas power cycles for various requirements.   |  |  |   |   | Analysing (K4)          |                  |

|     |   |               |
|-----|---|---------------|
| CO2 | apply the knowledge of the working of internal combustion engine in automobile industry.                            | Applying (K3) |
| CO3 | implement the concepts of steam nozzles and turbines in real time application.                                      | Applying (K3) |
| CO4 | make use of the knowledge on working and performance of air compressor.   | Applying (K3) |
| CO5 | solve problems on refrigeration and air-conditioning systems by understanding the various thermodynamic properties. | Applying (K3) |

|--|--|--|--|---|---|---|-------------------------|
| ME23403  | MECHANICS OF MATERIALS   |  |  | 3 | 1 | 0 | 4                       |
| <b>COURSE OBJECTIVES</b>   |  |  |  |   |   |   |                         |
| To enable the students to  |  |  |  |   |   |   |                         |
| 1  | understand the concepts of stress, strain, principal stresses and principal planes.  |  |  |   |   |   |                         |
| 2  | know the concept of shearing force and bending moment due to external loads in determinate beams and their effect on stresses. |  |  |   |   |   |                         |
| 3  | determine stresses and deformation in circular shafts and helical spring due to torsion.                                       |  |  |   |   |   |                         |
| 4  | compute slopes and deflections in determinate beams by various methods.  |  |  |   |   |   |                         |
| 5  | understand the stresses and deformations induced in thin shells.   |  |  |   |   |   |                         |
| <b>UNIT I</b>  | <b>STRESS, STRAIN AND DEFORMATION OF SOLIDS</b>  |  |  |   |   |   | <b>12</b>               |
| Mechanical Properties of Materials, Stress strain curve, Rigid and Deformable bodies – Strength, Stiffness and Stability; Stresses - Tensile, Compressive and Shear; Generalized Hook's law Deformation of simple and compound bars under axial load; Thermal stress Relationship between Elastic constants –Volumetric strains; Stresses on inclined plane – Principal planes and stresses – Mohr's circle of stresses. |  |  |  |   |   |   |                         |
| <b>UNIT II</b>   | <b>SHEAR FORCE &amp; BENDING MOMENT</b>  |  |  |   |   |   | <b>12</b>               |
| Definition of beam & Types of beams - Supports and Loads; Shear force and Bending Moment diagram in beams – Cantilever, simply supported and over hanging beams subjected to concentrated loads, uniformly distributed and uniformly varying loads; Point of contra flexure.   |  |  |  |   |   |   |                         |
| <b>UNIT III</b>  | <b>TORSION OF SHAFTS AND SPRINGS</b>   |  |  |   |   |   | <b>12</b>               |
| Theory of torsion, Bars of Solid and hollow circular section; Power transmitted by a Shaft -Torsion stiffness; Stresses in helical springs – Deflection of open & closed coil helical springs under axial loads.   |  |  |  |   |   |   |                         |
| <b>UNIT IV</b>   | <b>DEFLECTION OF BEAMS</b>   |  |  |   |   |   | <b>12</b>               |
| Slope & Deflection of a Cantilever & Simply supported beams by Double Integration Method, Macaulay Method for computation of slopes and deflections in beams; Concept of Conjugate beam method (Theory only).  |  |  |  |   |   |   |                         |
| <b>UNIT V</b>  | <b>THIN SHELLS</b>   |  |  |   |   |   | <b>12</b>               |
| Stresses in thin cylindrical shell due to internal pressure circumferential and longitudinal stresses and deformation in thin cylinders; spherical shells subjected to internal pressure – Deformation in spherical shells; Lamé's theorem.  |  |  |  |   |   |   |                         |
|  |  |  |  |   |   |   | <b>TOTAL PERIODS:60</b> |
| <b>COURSE OUTCOMES</b>   |  |  |  |   |   |   | <b>BT MAPPED</b>        |
| At the end of the course, the students will be able to   |  |  |  |   |   |   | (Highest level)         |
| CO1  | apply the concepts of strength of materials to obtain solutions to real time Engineering problems.                             |  |  |   |   |   | Applying (K3)           |
| CO2  | analyze the deformation behavior of simple structures subjected to different loads.  |  |  |   |   |   | Analysing (K4)          |
| CO3  | solve torsion of circular bars and stresses in helical springs.  |  |  |   |   |   | Applying (K3)           |
| CO4  | interpret the deflection and slope of beams using different methods under various loading conditions.                          |  |  |   |   |   | Understanding (K2)      |
| CO5  | experiment with the stresses in thin cylindrical and spherical shells.   |  |  |   |   |   | Applying (K3)           |

| TEXT BOOKS   |                         |     |     |     |     |     |     |     |     |       |      |      |      |      |

| <b>MC23401</b>  | <b>ENVIRONMENTAL SCIENCES AND SUSTAINABILITY</b>  | <b>2</b> | <b>0</b> | <b>0</b> | <b>0</b>  |
| <b>COURSE OBJECTIVES</b>  |   |          |          |          |           |
| To enable the students to   |   |          |          |          |           |
| 1   | establish the knowledge of precious resources of the environment and their various impacts.       |          |          |          |           |
| 2   | create awareness on ecosystem and biodiversity preserve.  |          |          |          |           |
| 3   | learn scientific and technological solutions to current day pollution issues.                     |          |          |          |           |
| 4   | analyze climate changes, concept of carbon credit and the challenges of environmental management. |          |          |          |           |
| 5   | understand green materials, energy cycles and the role of sustainable urbanization.               |          |          |          |           |
| <b>UNIT I</b>   | <b>ENVIRONMENT AND NATURAL RESOURCES</b>  |          |          |          | <b>6</b>  |
| Definition, scope and importance of Environment. Forest resources: Use and over-exploitation, deforestation, - mining, dams and their effects on forests and tribal people. Water resources: Use and over- utilization of surface and ground water, dams-benefits and problems. Food resources: effects of modern agriculture, fertilizer-pesticide problems. Role of an individual in conservation of natural resources.         |   |          |          |          |           |
| <b>UNIT II</b>  | <b>ECOSYSTEMS AND BIODIVERSITY</b>  |          |          |          | <b>6</b>  |
| Concept of an ecosystem: Structure and function of an ecosystem - ecological succession - food chains and food webs. Ecosystems- Types of ecosystem: Introduction - forest ecosystem and lake ecosystems. Biodiversity: Introduction - definition (genetic - species - ecosystem). Diversity - Value of biodiversity - Hotspots of biodiversity - Conservation of biodiversity: In-situ and ex-situ conservation of biodiversity. |   |          |          |          |           |
| <b>UNIT III</b>   | <b>ENVIRONMENTAL POLLUTION</b>  |          |          |          | <b>6</b>  |
| Pollution: Définition - air pollution - water pollution - marine pollution - noise pollution. Solid waste management: Causes - effects - control measures of urban and industrial wastes. Role of an individual in prevention of pollution - Electronic waste -Sources-Causes and its effects- Pollution case studies-Field study of local polluted site – Industrial/Agricultural  |   |          |          |          |           |
| <b>UNIT IV</b>  | <b>SUSTAINABILITY AND ENVIRONMENT</b>   |          |          |          | <b>6</b>  |
| Sustainability - from unsustainability to sustainability-millennium development goals, and protocols. Sustainable development goals-targets, indicators and intervention areas. Climate change – acid rain - ozone layer depletion. Regional and local environmental issues and possible solutions- case studies. Concept of carbon credit, carbon footprint. Environmental management in industry-A case study.                  |   |          |          |          |           |
| <b>UNIT V</b>   | <b>SUSTAINABILITY PRACTICES</b>   |          |          |          | <b>6</b>  |
| Zero waste and R concept, Circular economy, ISO 14000 Series, Environmental Impact Assessment - Sustainable energy: Non-conventional Sources, Green materials, Energy Cycles - carbon cycle, emission and sequestration, Green Engineering: Sustainable urbanization- Socio economical and technological change.  |   |          |          |          |           |
| <b>TOTAL PERIODS</b>  |   |          |          |          | <b>30</b> |

| COURSE OUTCOMES                                     |   | BT Mapped<br>(Highest Level) |
|---|---|------------------------------|
| At the end of this course, students will be able to |   |                              |
| CO1   | find the method of conservation of natural resources                                  | Understand(K2)               |
| CO2   | understand ecosystem and the conservation of biodiversity.                            | Understand(K2)               |
| CO3   | aware of environmental pollution and interpret its effects.                           | Understand(K2)               |
| CO4   | apply sustainable development for technological advancement and societal development. | Apply (K3)                   |
| CO5   | measure the sustainability practices for green energy cycles.                         | Analyze (K4)                 |

| <b>ME23404</b>   | <b>METAL CUTTING AND MACHINE TOOLS</b>  | <b>3</b> | <b>0</b> | <b>2</b> | <b>4</b>                 |
| <b>COURSE OBJECTIVES</b>   |   |          |          |          |                          |
| To enable the students to  |   |          |          |          |                          |
| 1  | understand the basic principles of theory of metal cutting..  |          |          |          |                          |
| 2  | illustrate the construction, specifications and operations of conventional lathe and semi-automatic machines.                   |          |          |          |                          |
| 3  | comprehend the operating mechanisms of machine tools like shaping, slotting, planing, milling, and drilling, grinding machines. |          |          |          |                          |
| 4  | gain knowledge on intricate manufacturing operations for gears and surface finishing processes.                                 |          |          |          |                          |
| 5  | develop the knowledge on CNC programming and part programming.  |          |          |          |                          |
| <b>UNIT I</b>  | <b>THEORY OF METAL CUTTING</b>  |          |          |          | <b>9</b>                 |
| Introduction - Material removal processes - Single point cutting tools-Types of chip formation- orthogonal cutting-tool nomenclature- machinability-cutting tool materials- tool wear- tool life- surface finish- cutting fluids.  |   |          |          |          |                          |
| <b>UNIT II</b>   | <b>LATHE AND SEMI AUTOMATIC MACHINES</b>  |          |          |          | <b>9</b>                 |
| Centre lathe - construction, specification, and operation ; cutting tool geometry- various operations- taper turning and thread cutting; work holding devices- Capstan and turret lathes- Swiss type, multi spindle; Turret Indexing mechanism- Bar feed mechanism.  |   |          |          |          |                          |
| <b>UNIT III</b>  | <b>SPECIAL MACHINES</b>   |          |          |          | <b>9</b>                 |
| Reciprocating machine tools - shaper, planer, slotter; Milling - types, milling cutters, operations; hole making- drilling ,Quill mechanism, Reaming, Boring, Tapping; Sawing machine - band saw, circular saw; broaching machines - broach construction, push, pull, surface and continuous broaching machines. |   |          |          |          |                          |
| <b>UNIT IV</b>   | <b>ABRASIVE PROCESSES AND GEAR CUTTING</b>  |          |          |          | <b>9</b>                 |
| Abrasive processes- grinding wheel, specifications and selection, types of grinding process, cylindrical grinding, surface grinding, Centre less grinding ; Gear cutting- forming, generation, shaping, hobbing; Gear Finishing Process-honing, lapping, super finishing, polishing and buffing, shot peening.   |   |          |          |          |                          |
| <b>UNIT V</b>  | <b>CNC MACHINE TOOLS AND PART PROGRAMMING</b>   |          |          |          | <b>9</b>                 |
| Numerical control (NC) machine tools – CNC- types, constructional details, special features; Part programming fundamentals – manual part programming, computer assisted part programming.  |   |          |          |          |                          |
| <b>LIST OF EXPERIMENTS</b>   |   |          |          |          |                          |
| 1. Single point tool profile   |   |          |          |          |                          |
| 2. Dove Tail ,Surface Finishing ,Spline  |   |          |          |          |                          |
| 3. Generating of Contour Profile (Concave &Convex)   |   |          |          |          |                          |
| 4. Making a Keyway(External &Internal)   |   |          |          |          |                          |
| 5. Making Spur gear & Helical gear.  |   |          |          |          |                          |
| 6. Cylindrical grinding & Surface Grinding operations  |   |          |          |          |                          |
|  |   |          |          |          | <b>TOTAL PERIODS: 75</b> |

| <b>COURSE OUTCOMES</b>  |  |     |     |     |     |     |     |     |     |       |      |      |                                     |      |
|---|--|-----|-----|-----|-----|-----|-----|-----|-----|-------|------|------|-------------------------------------|------|
| At the end of this course, students will be able to   |  |     |     |     |     |     |     |     |     |       |      |      | <b>BT MAPPED</b><br>(Highest level) |      |
| CO1   | apply the concepts of theory of metal cutting in real time machining.  |     |     |     |     |     |     |     |     |       |      |      | Applying (K3)                       |      |
| CO2   | explain different machining operations which are performed in lathe machines.  |     |     |     |     |     |     |     |     |       |      |      | Understanding (K2)                  |      |
| CO3   | identify machine tools and apply operating knowledge on the working of tools like shaper, drilling, milling and all allied machines. |     |     |     |     |     |     |     |     |       |      |      | Applying (K3)                       |      |
| CO4   | apply knowledge of gear cutting and different surface finishing process like grinding and gear finishing.                            |     |     |     |     |     |     |     |     |       |      |      | Applying (K3)                       |      |
| CO5   | make use of CNC operating codes for designing different machine components.  |     |     |     |     |     |     |     |     |       |      |      | Applying (K3)                       |      |
| <b>TEXT BOOKS</b>   |  |     |     |     |     |     |     |     |     |       |      |      |                                     |      |
